How we are developing Graylog2

Lennart Koopmann, GOTO Berlin 2014

Graylog2

- Open Source Log Management Layer
- Started by me in 2010, then founded GmbH behind it
- Now a team of 10 people working on it full-time
- Customers and users from SMB to huge Enterprise
- All Java

Tools

- GitHub (+ private repositories)
- Slack with a lot of integrations (+ Hubot)
- Aha / Google Docs / Email
- Travis CI
- You get a lot of stuff for free (Profiler, IDE, ...)
- AWS for infrastructure and demo system

Lessons

- We tend to live in a filter bubble and this is dangerous to crossing the gap into the big markets.
- The true value of professional open source development lies in the ecosystems.

buffer: implement `iterable` interface #8579

New Issue

Open vkurchatkin wants to merge 1 commit into joyent:v0.12 from vkurchatkin:iterable-buffer

vkurchatkin commented 12 days ago

This makes possible to use `for..of` loop with buffers. Also related `keys`, `values` and `entries` methods are added for feature parity with `Uint8Array`.

This is basically the code from v8 array iterator implementation minus spec stuff.

Merging via command line

If you do not want to use the merge button or an automatic merge cannot be performed, you can perform a manual merge on the command line.

HTTP	Git	Patch	https://github.com/smcgovern/docs-travis-ci-com.git
------	-----	-------	---

Step 1: From your project repository, check out a new branch and test the changes.

```
git checkout -b smcgovern-env_var_endpoints gh-pages
git pull https://github.com/smcgovern/docs-travis-ci-com.git env_var_endpoints
```

Step 2: Merge the changes and update on GitHub.

```
git checkout gh-pages
git merge --no-ff smcgovern-env_var_endpoints
git push origin gh-pages
```

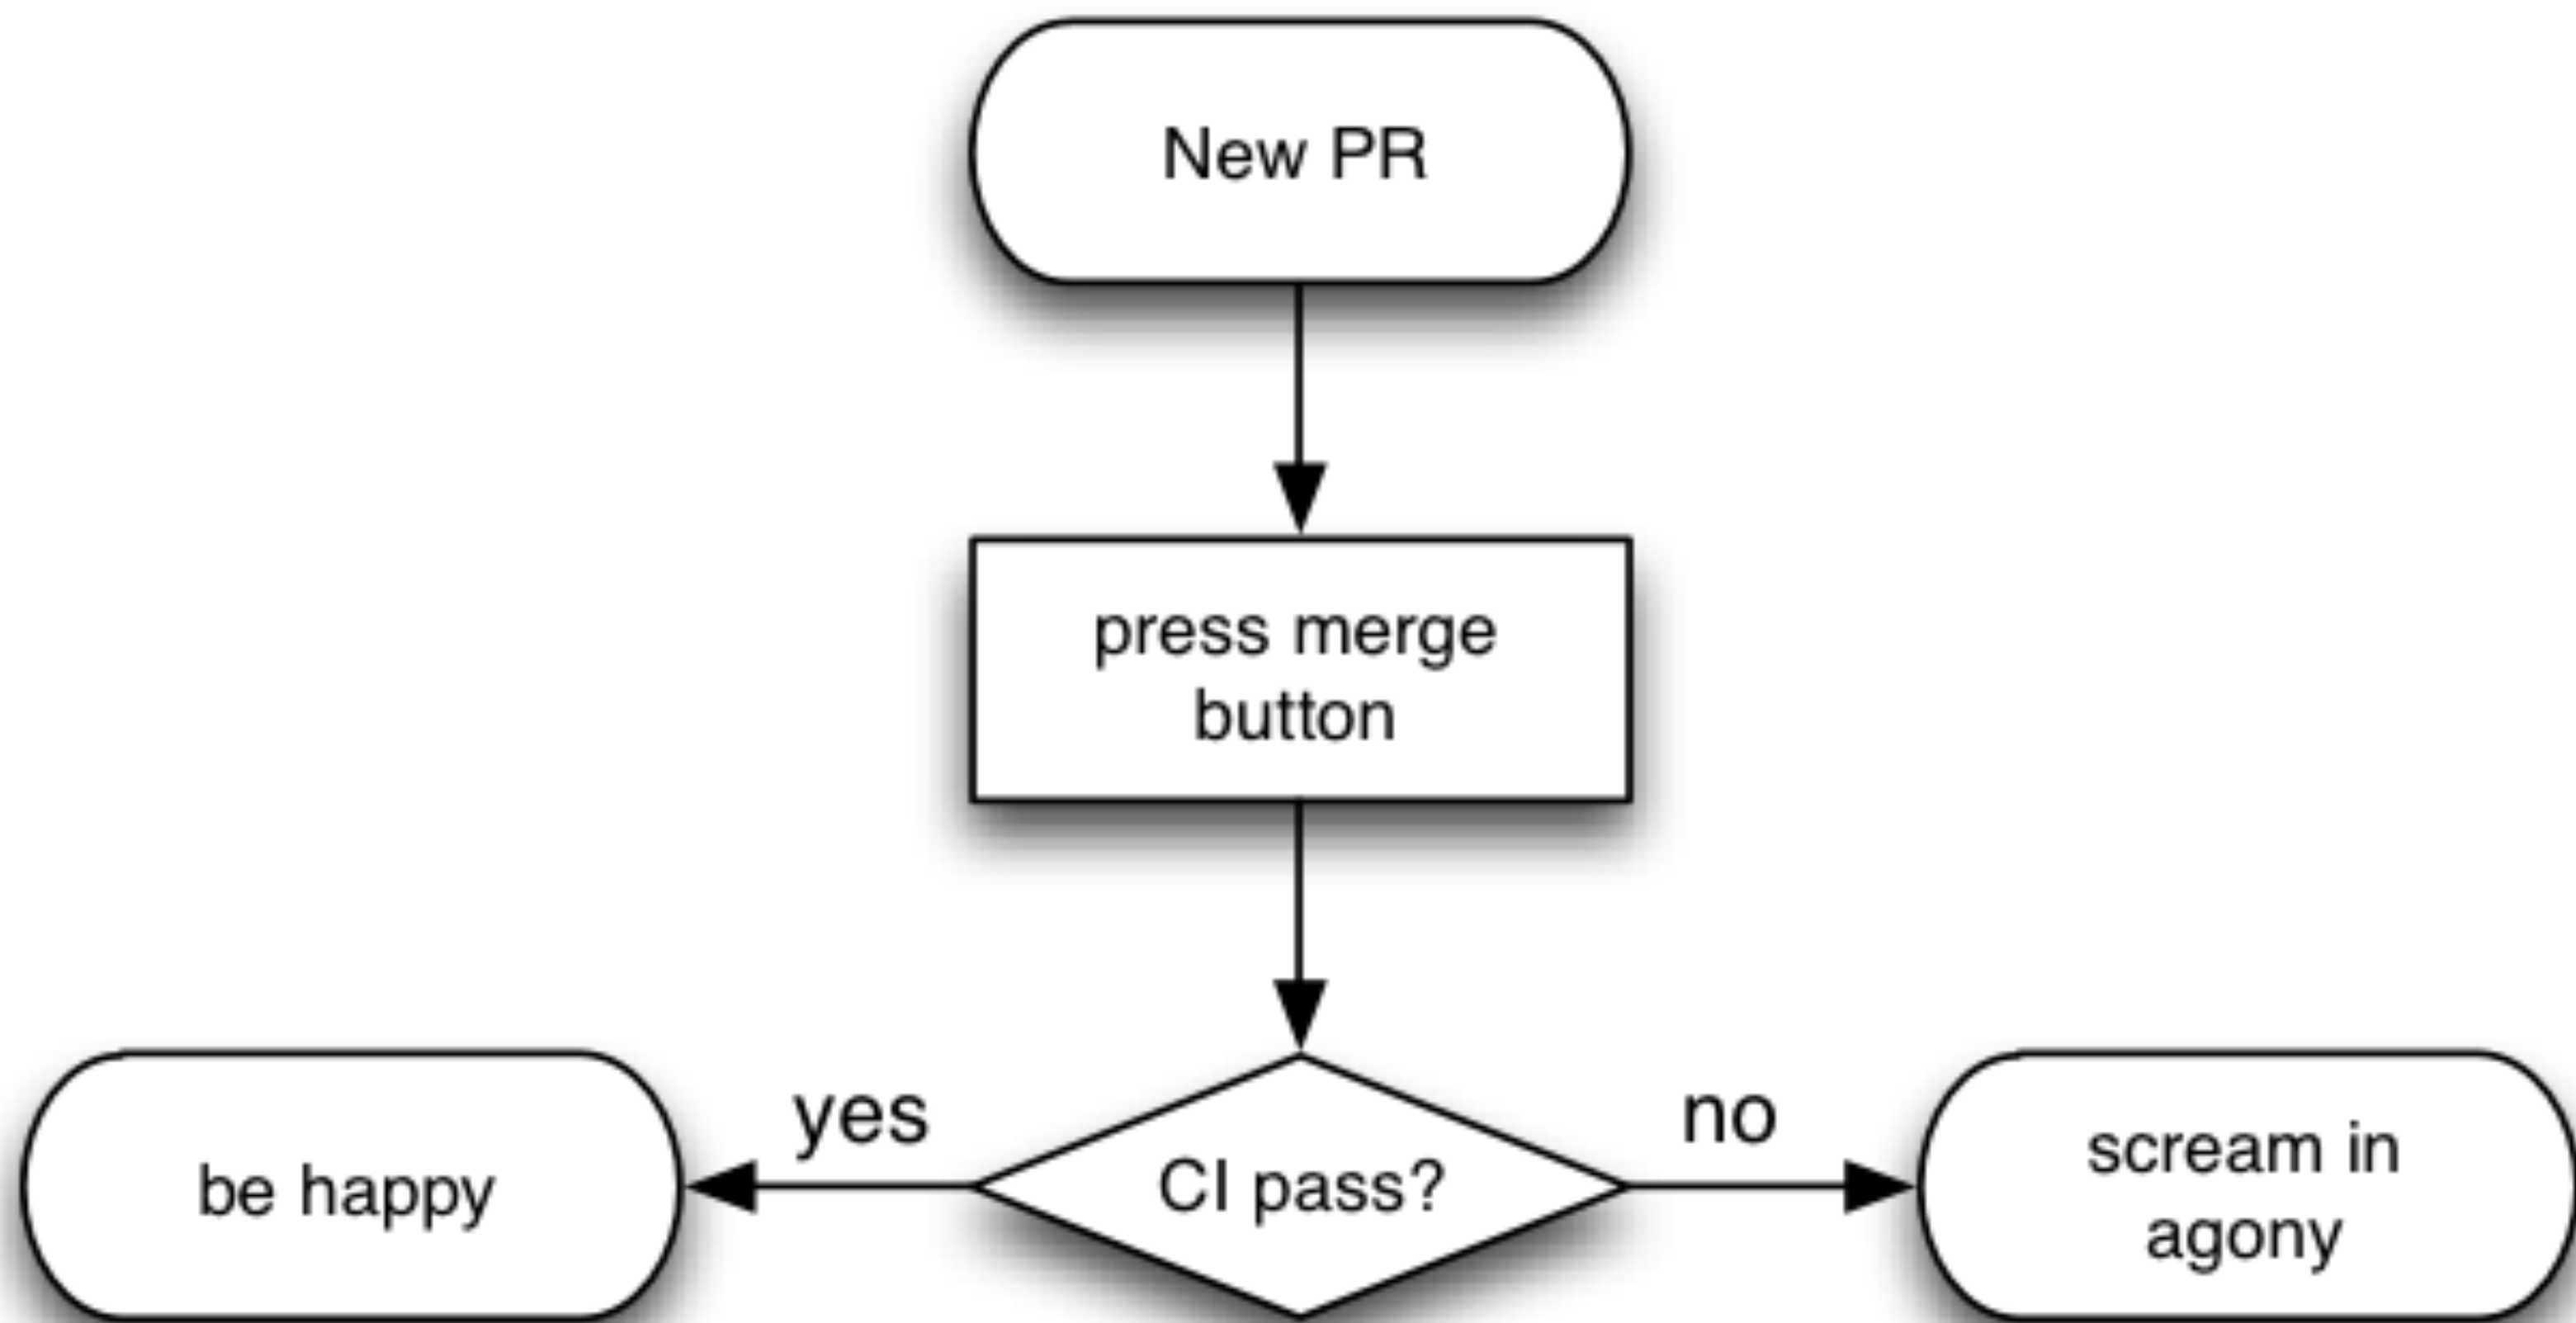

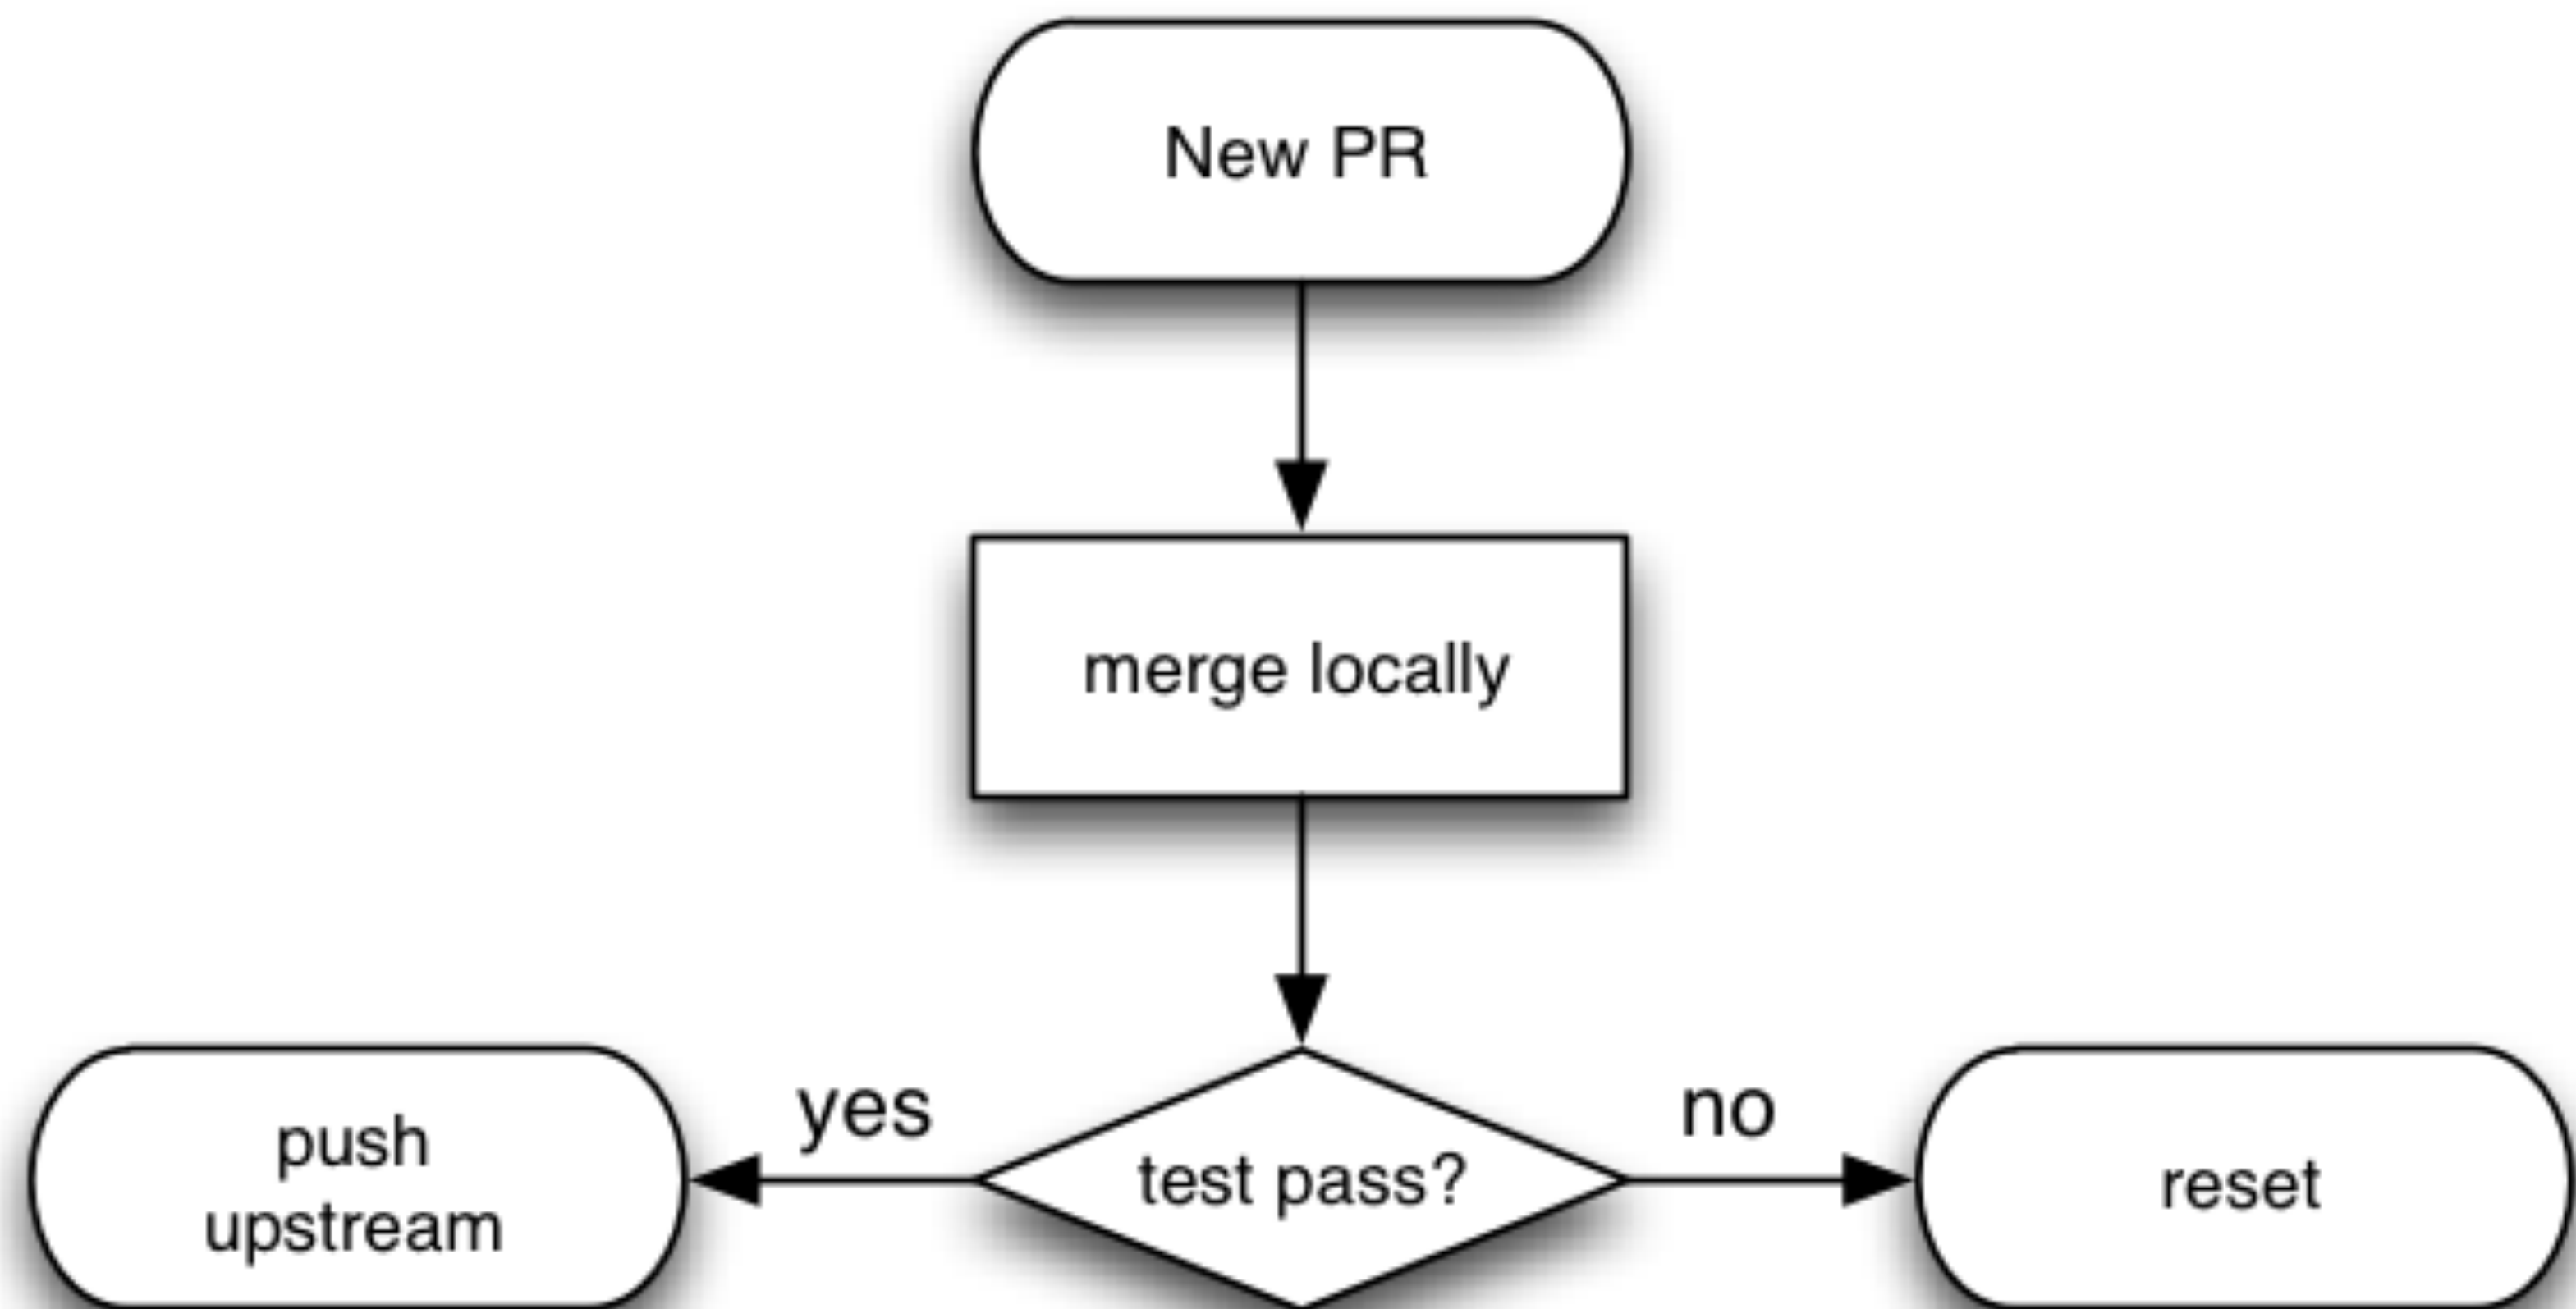

This pull request can be automatically merged.

You can also merge branches on the [command line](#).

TRAVIS CI STARTED AS A HOBBY PROJECT

Travis CI is a continuous integration service that allows developers to automate the building and testing of code changes made to a repository in order to ensure the quality and integrity of new code before it is released to production. It was created by David Heinemeier Hansson (DHH) in 2011 as a hobby project while he was working at Basecamp. The project was initially a side project, but it quickly gained popularity and became a full-time job for DHH and his team. Today, Travis CI is one of the most widely used continuous integration services in the world, with over 100,000 active users and a large community of developers and contributors. The project has been successful because it provides a simple and easy-to-use interface for setting up and managing continuous integration workflows, and it has a strong focus on security and reliability. Travis CI is also open source, which has helped it gain a large following and a strong reputation in the developer community.

TRAVIS CI RUNS

MORE THAN 120000 BUILDS EVERY DAY

TRAVIS CI SUPPORTS

RUBY, PHP, PYTHON, ERLANG, PERL, JAVA,
HASKELL, OBJECTIVE-C, SWIFT, C, C++,
CLOJURE, GROOVY, SCALA, RUST, GO, NODE.JS

TRAVIS CI HELPS
PEOPLE BUILD BETTER SOFTWARE
