

## Architecture War Stories

# Fun Stories from an Architect's Life

Stefan Tilkov | @stilkov | innoQ

GOTO Berlin

11/07/2014

# Ground Rules

**No offense – just lessons learned**

**Most systems are in production**

**Still, many {managers | users | admins} are happy**

**Less can be more**

# Context

**Customer care, accounting & billing**

**Large-scale big-bang replacement effort**

**› 150 developers**

**› 20 architects/framework devs**

**Java, Swing, CORBA, Oracle**

**Custom persistence framework**

Identity Map

7	
3	

Server

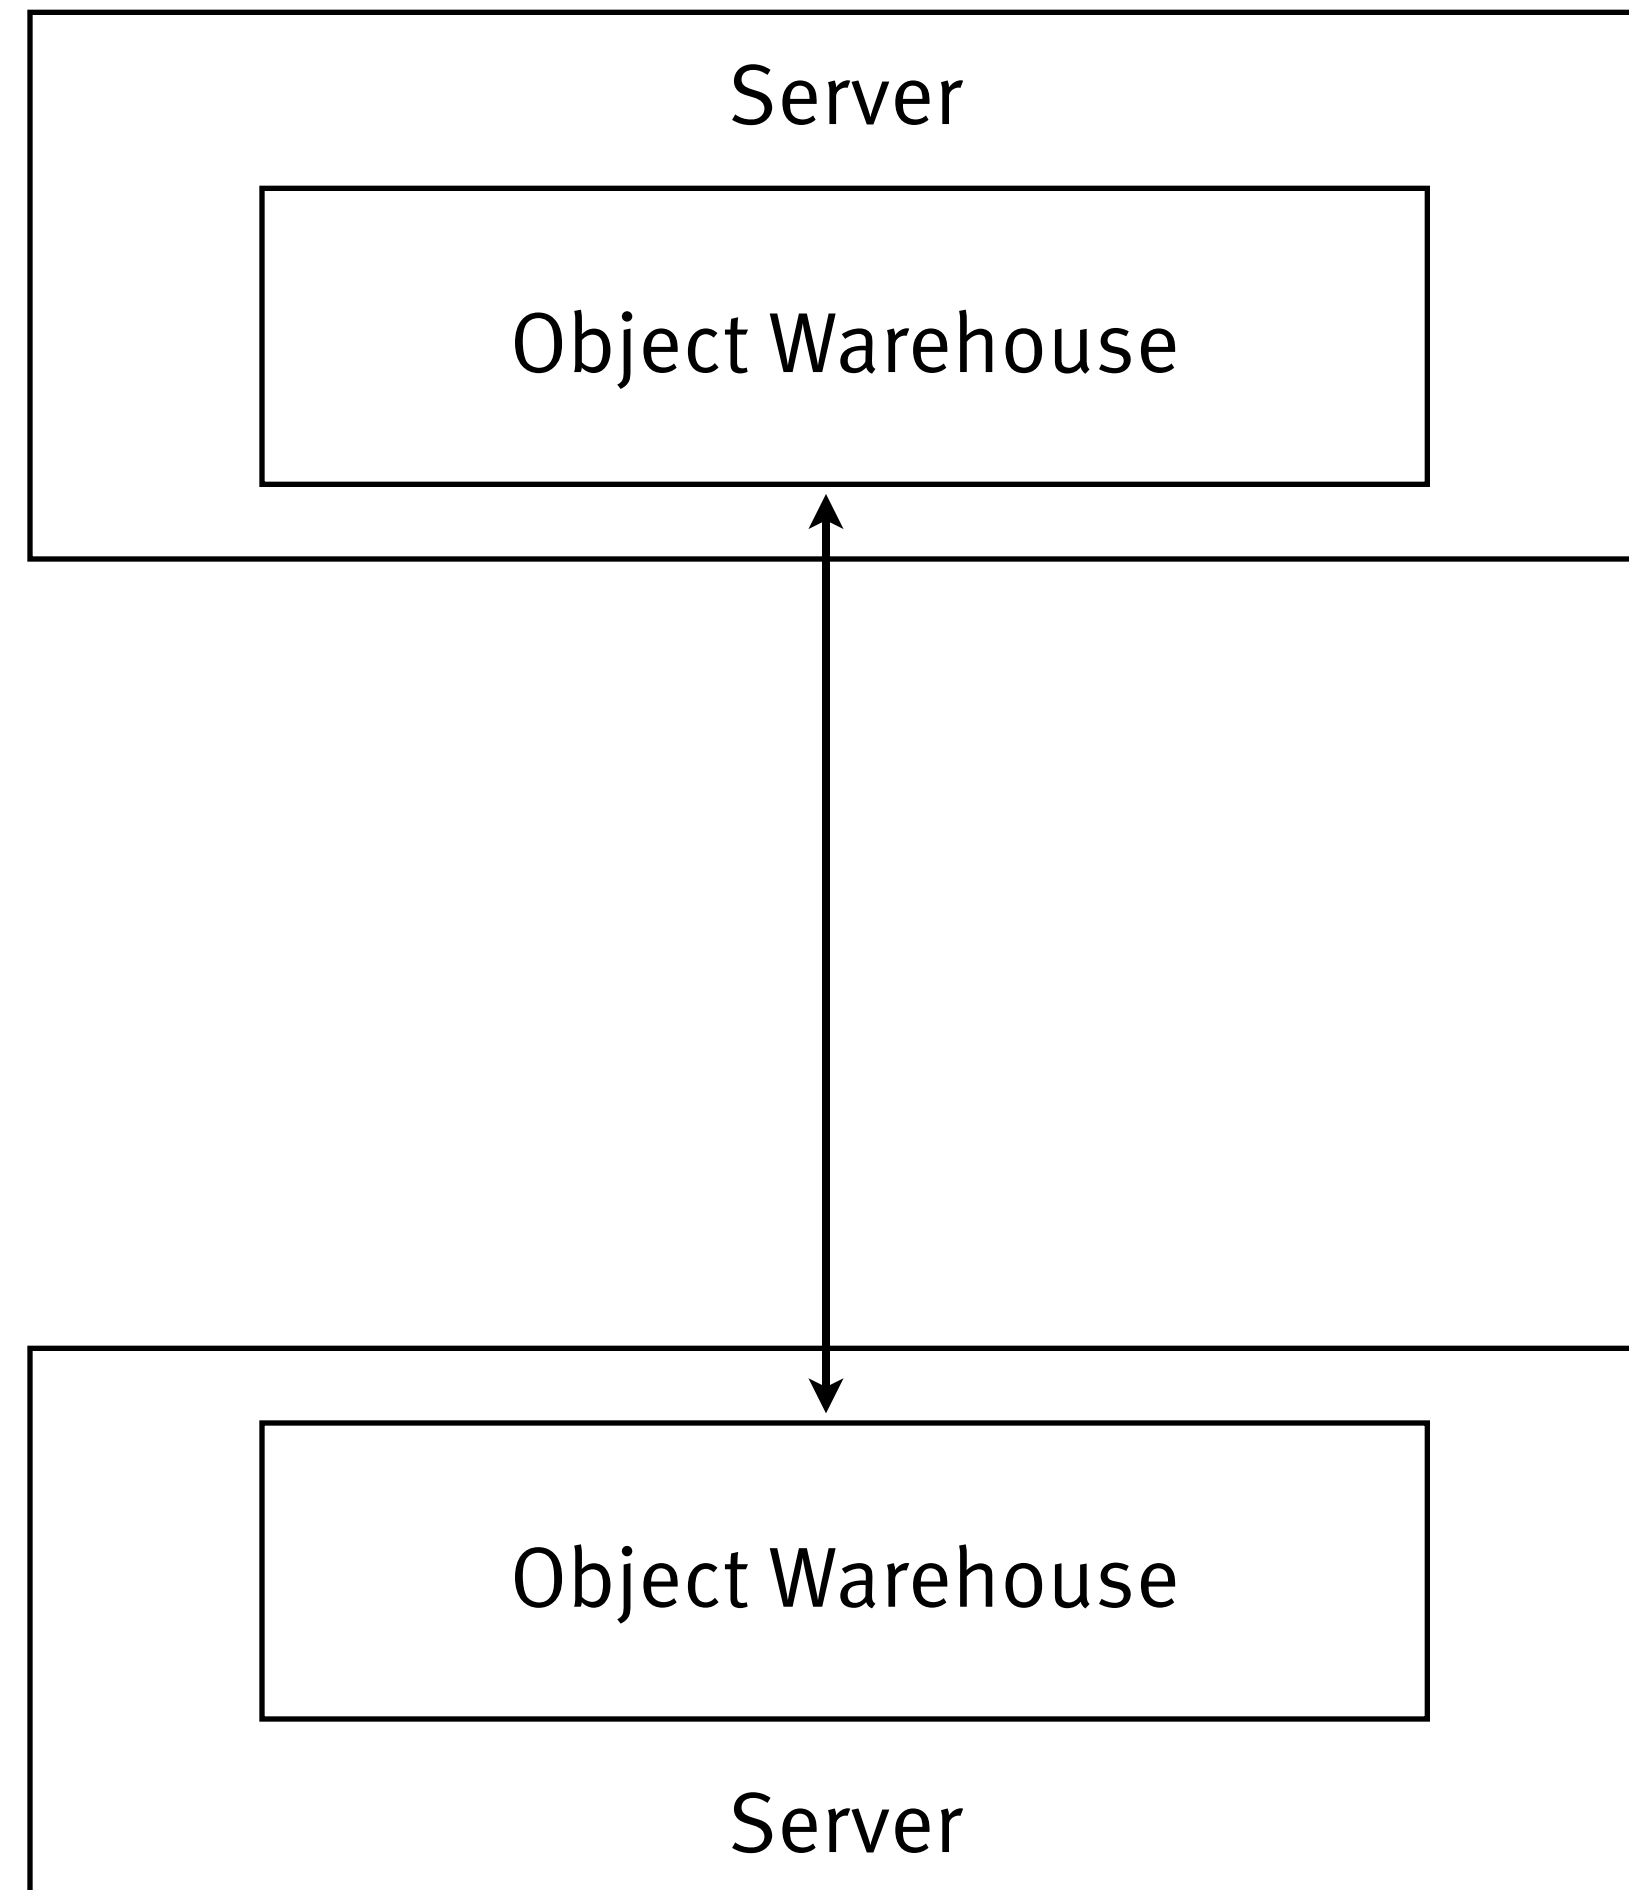

Transaction Map

1	-	1	
2		9	

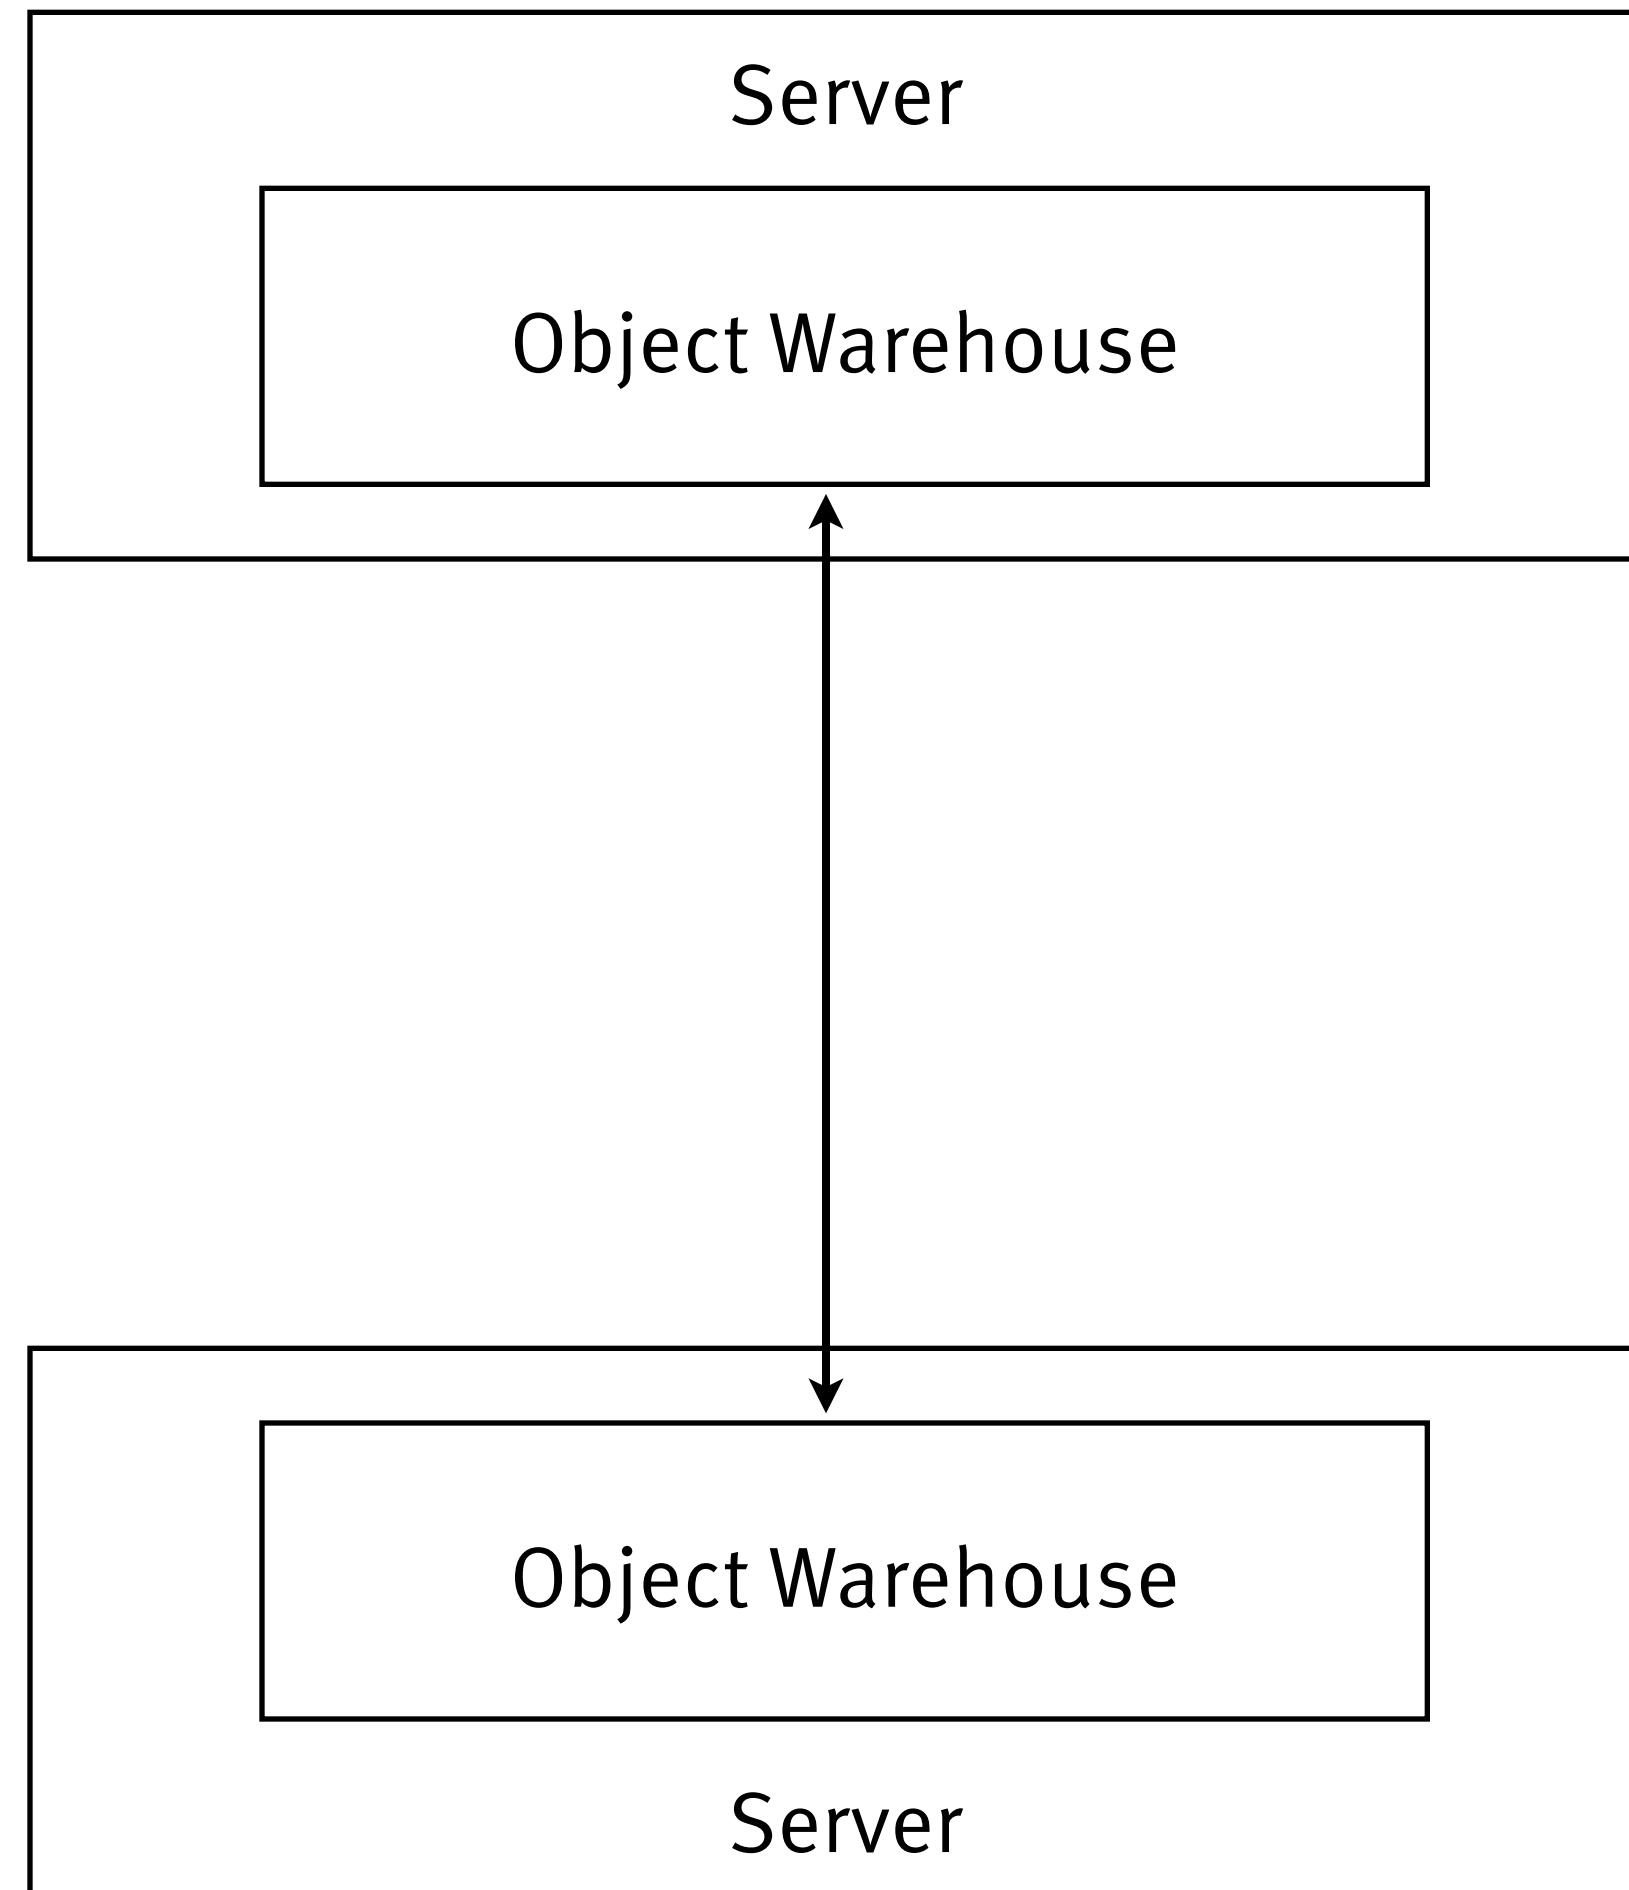

**Global synchronization? 2 PC?**

**Cache notifications? Events?**

**Transaction locality? Client Affinity?**

# **Lessons learned**

**Don't cache the cache**

**In distributed systems, application state is your enemy**

**If it's “sophisticated”, you probably shouldn't be doing it**

**Development  $\neq$  production**

# Data Complications

# Context

**Insurance system**

**Maintenance 1000 person months/year**

**Smalltalk, COBOL, C, IMS, DB2**

**Homegrown COBOL OO system**

Client  
(Smalltalk)

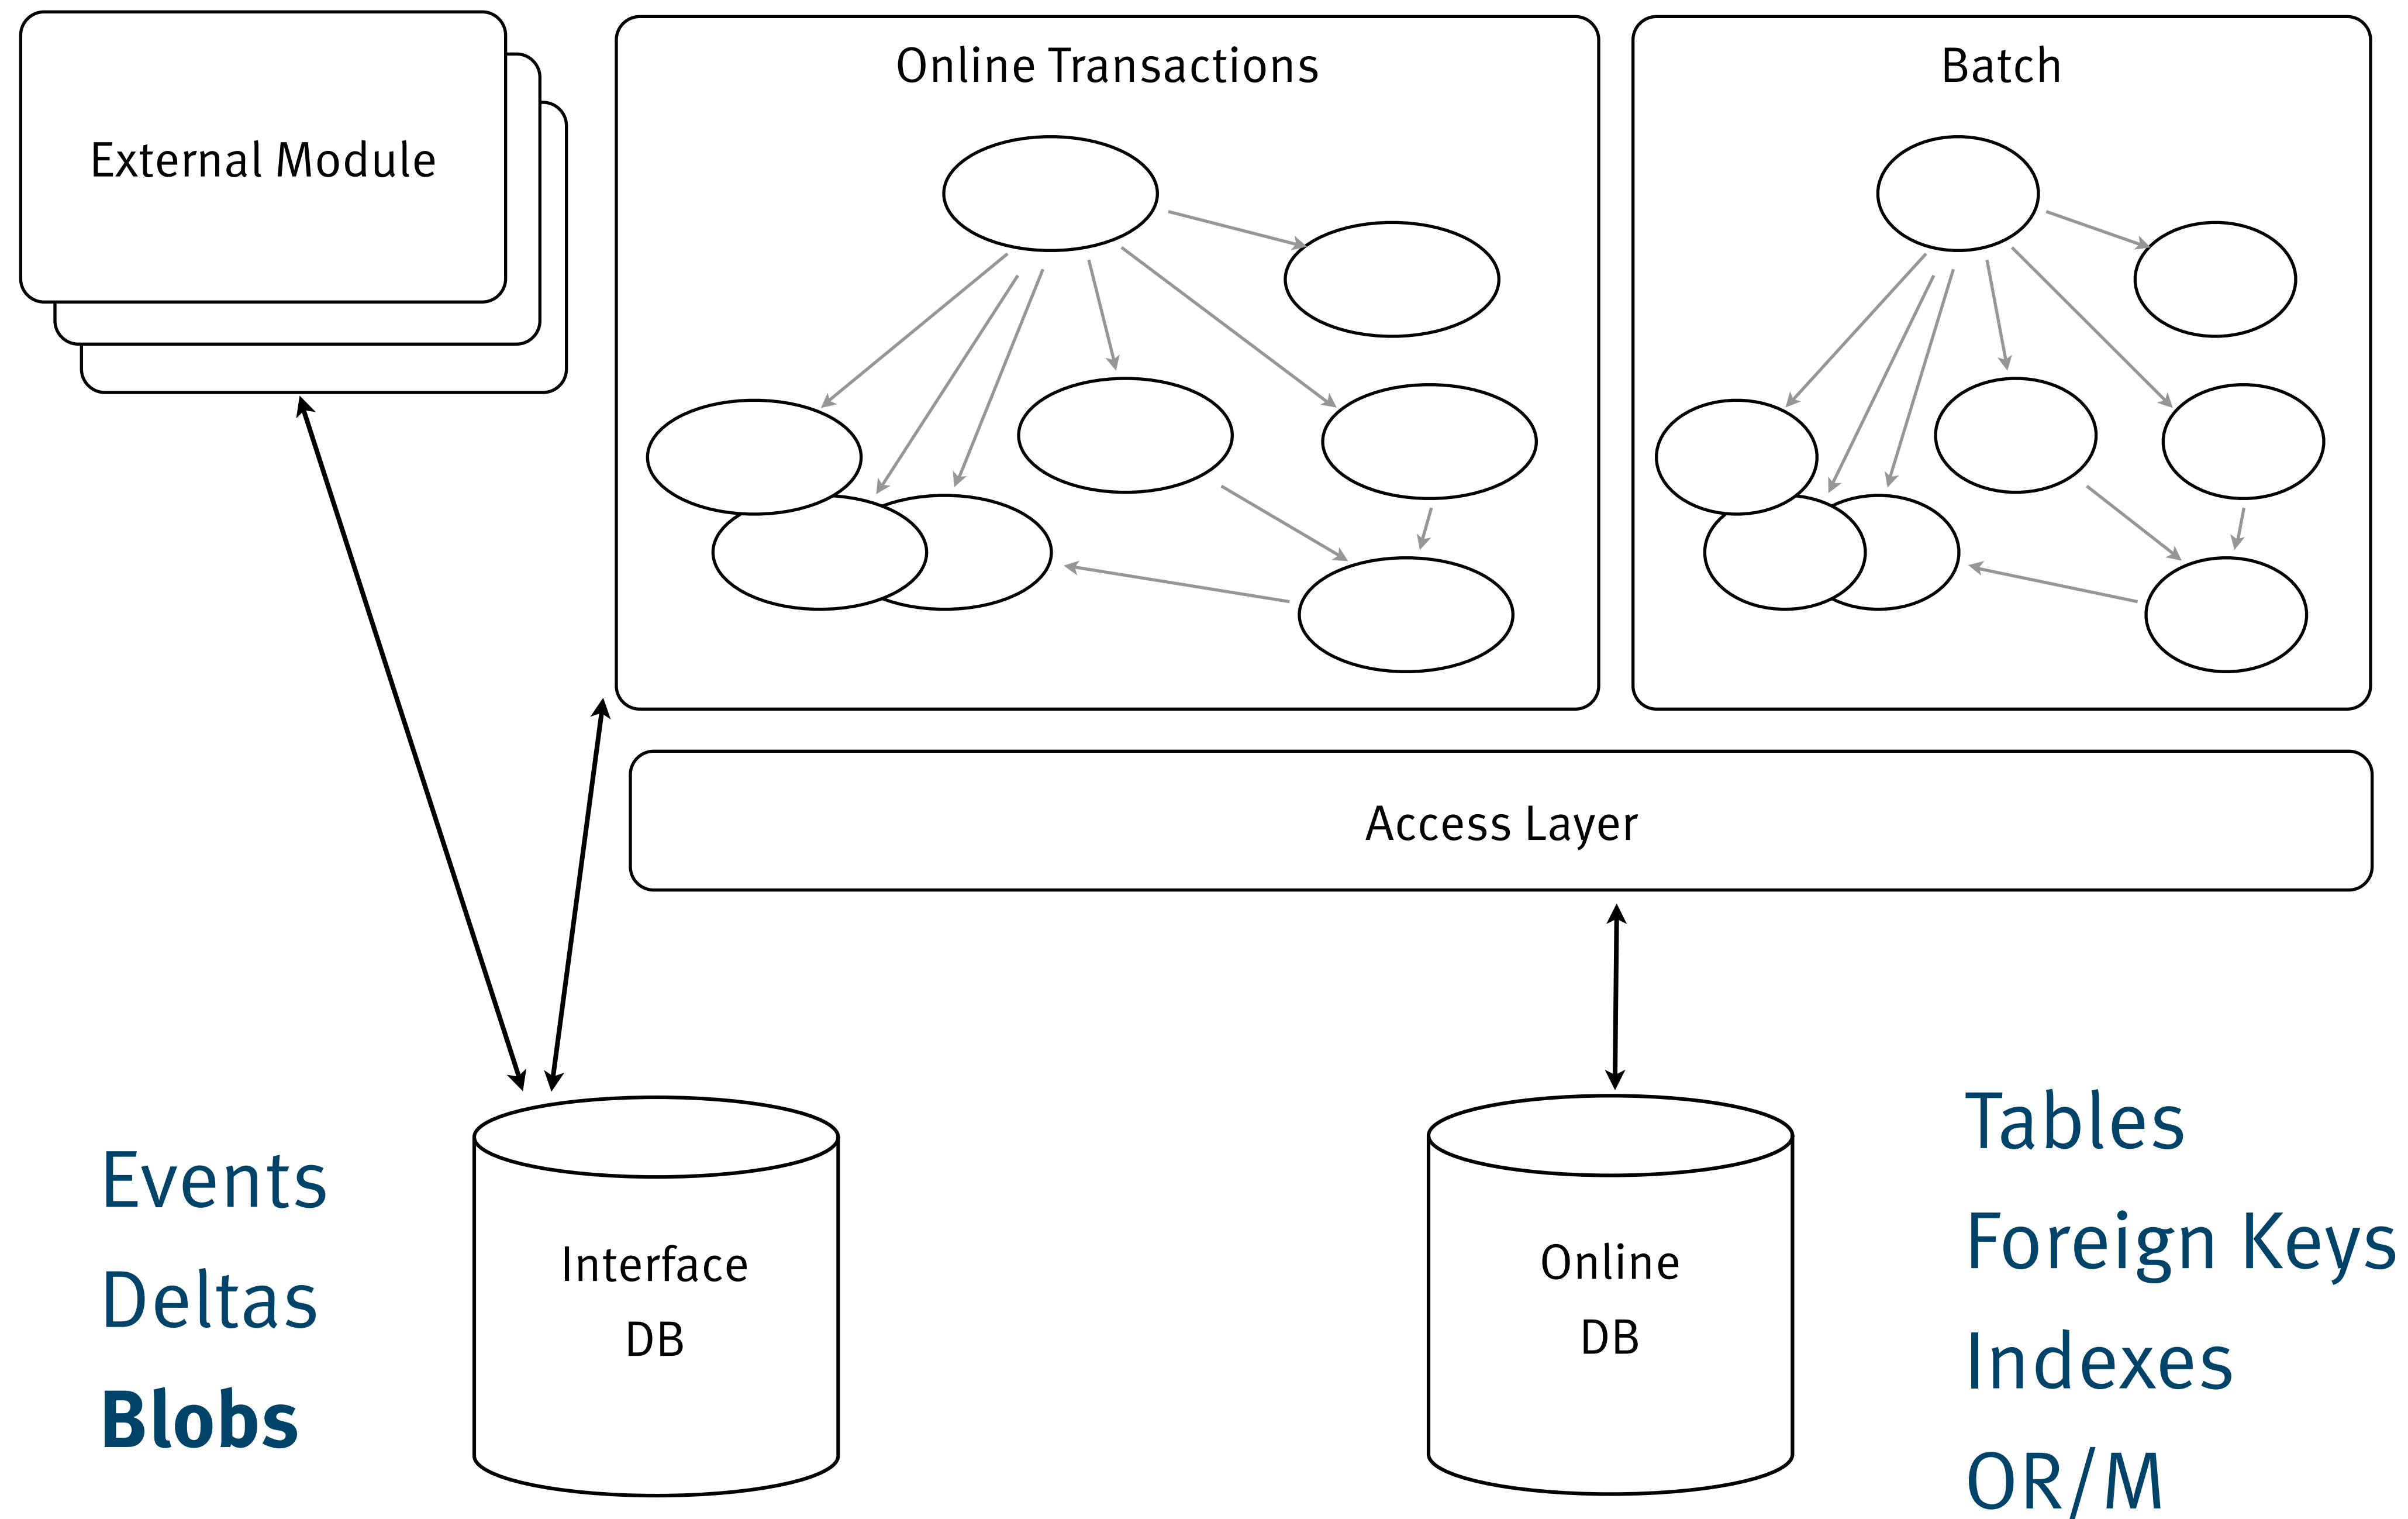

Broker

Server  
(COBOL)

Transaction Manager

Gateway

# Migration

# **Lessons learned**

**Data should be free of code dependencies**

**The longer you store it, the simpler it needs to be**

**Beware of smelly blobs**

# Evaluating Yourself to Death

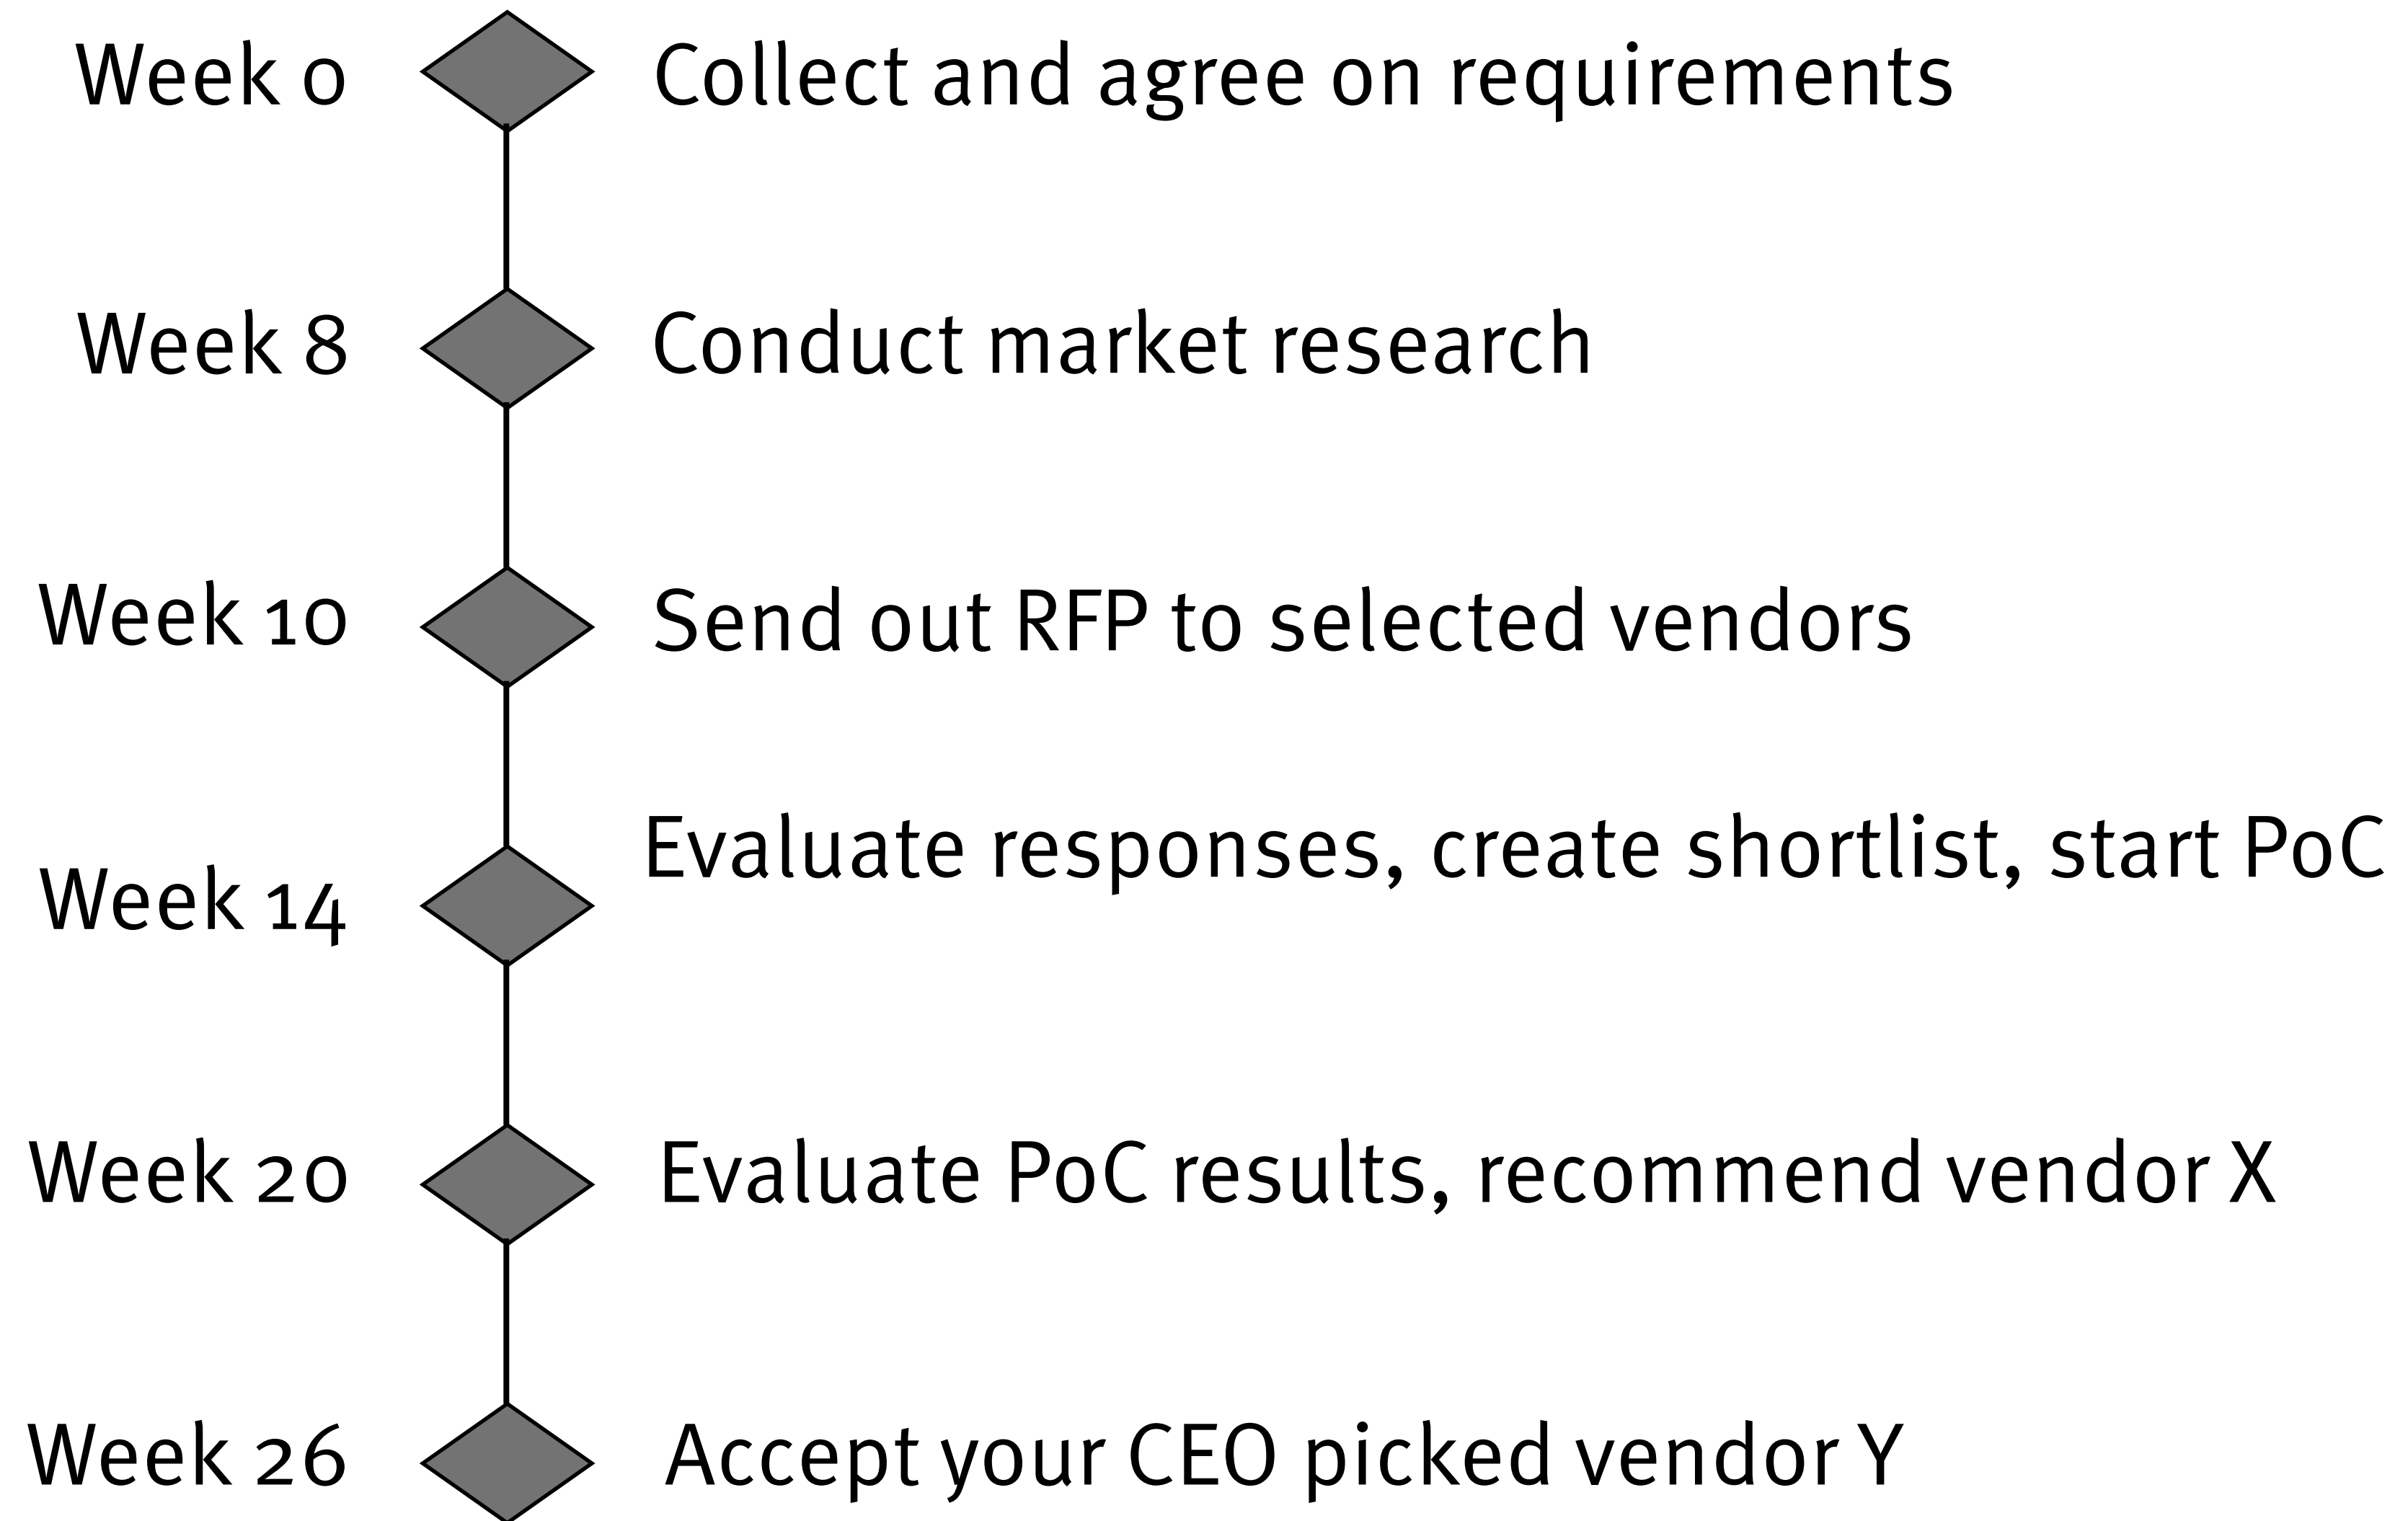

# Context

**Strategic health care platform**

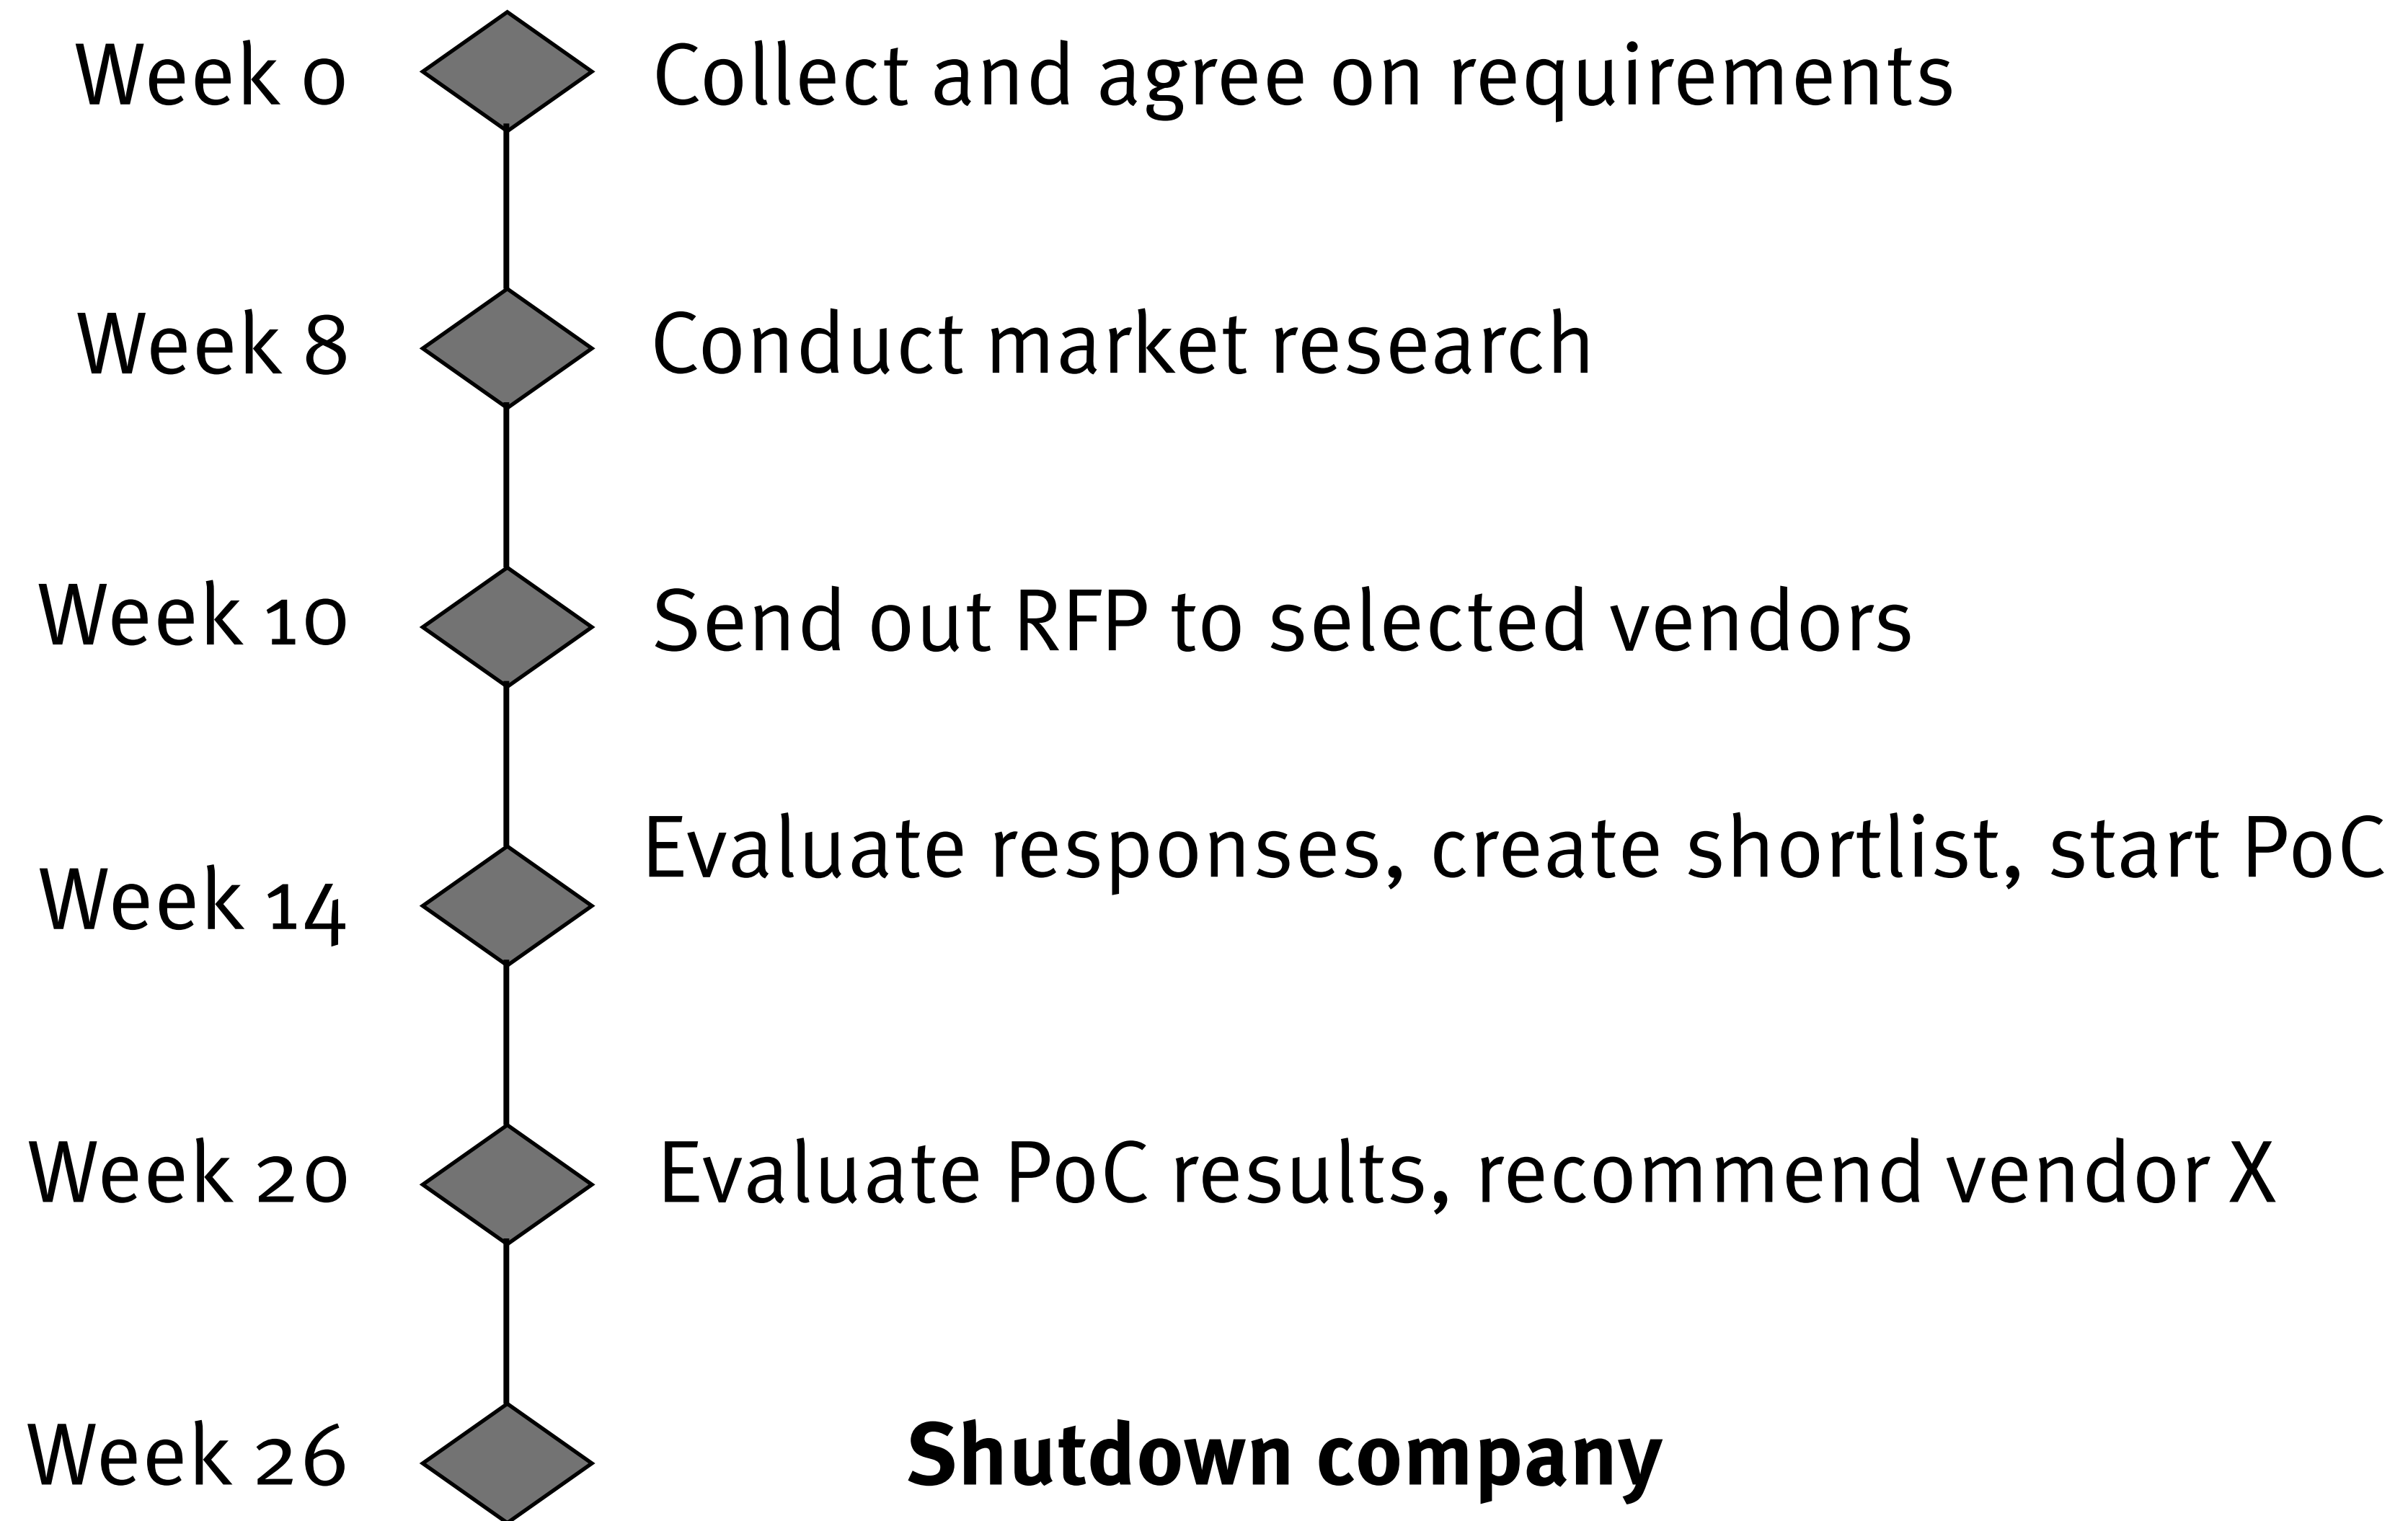

**Architecture team 20+10 people**

**Build foundation for 800+ person year effort**

# Vendor Selection

# Vendor Selection

# Lessons learned

**Just do it**

**Better ask for forgiveness than permission**

**Your *system* WILL be dynamic**

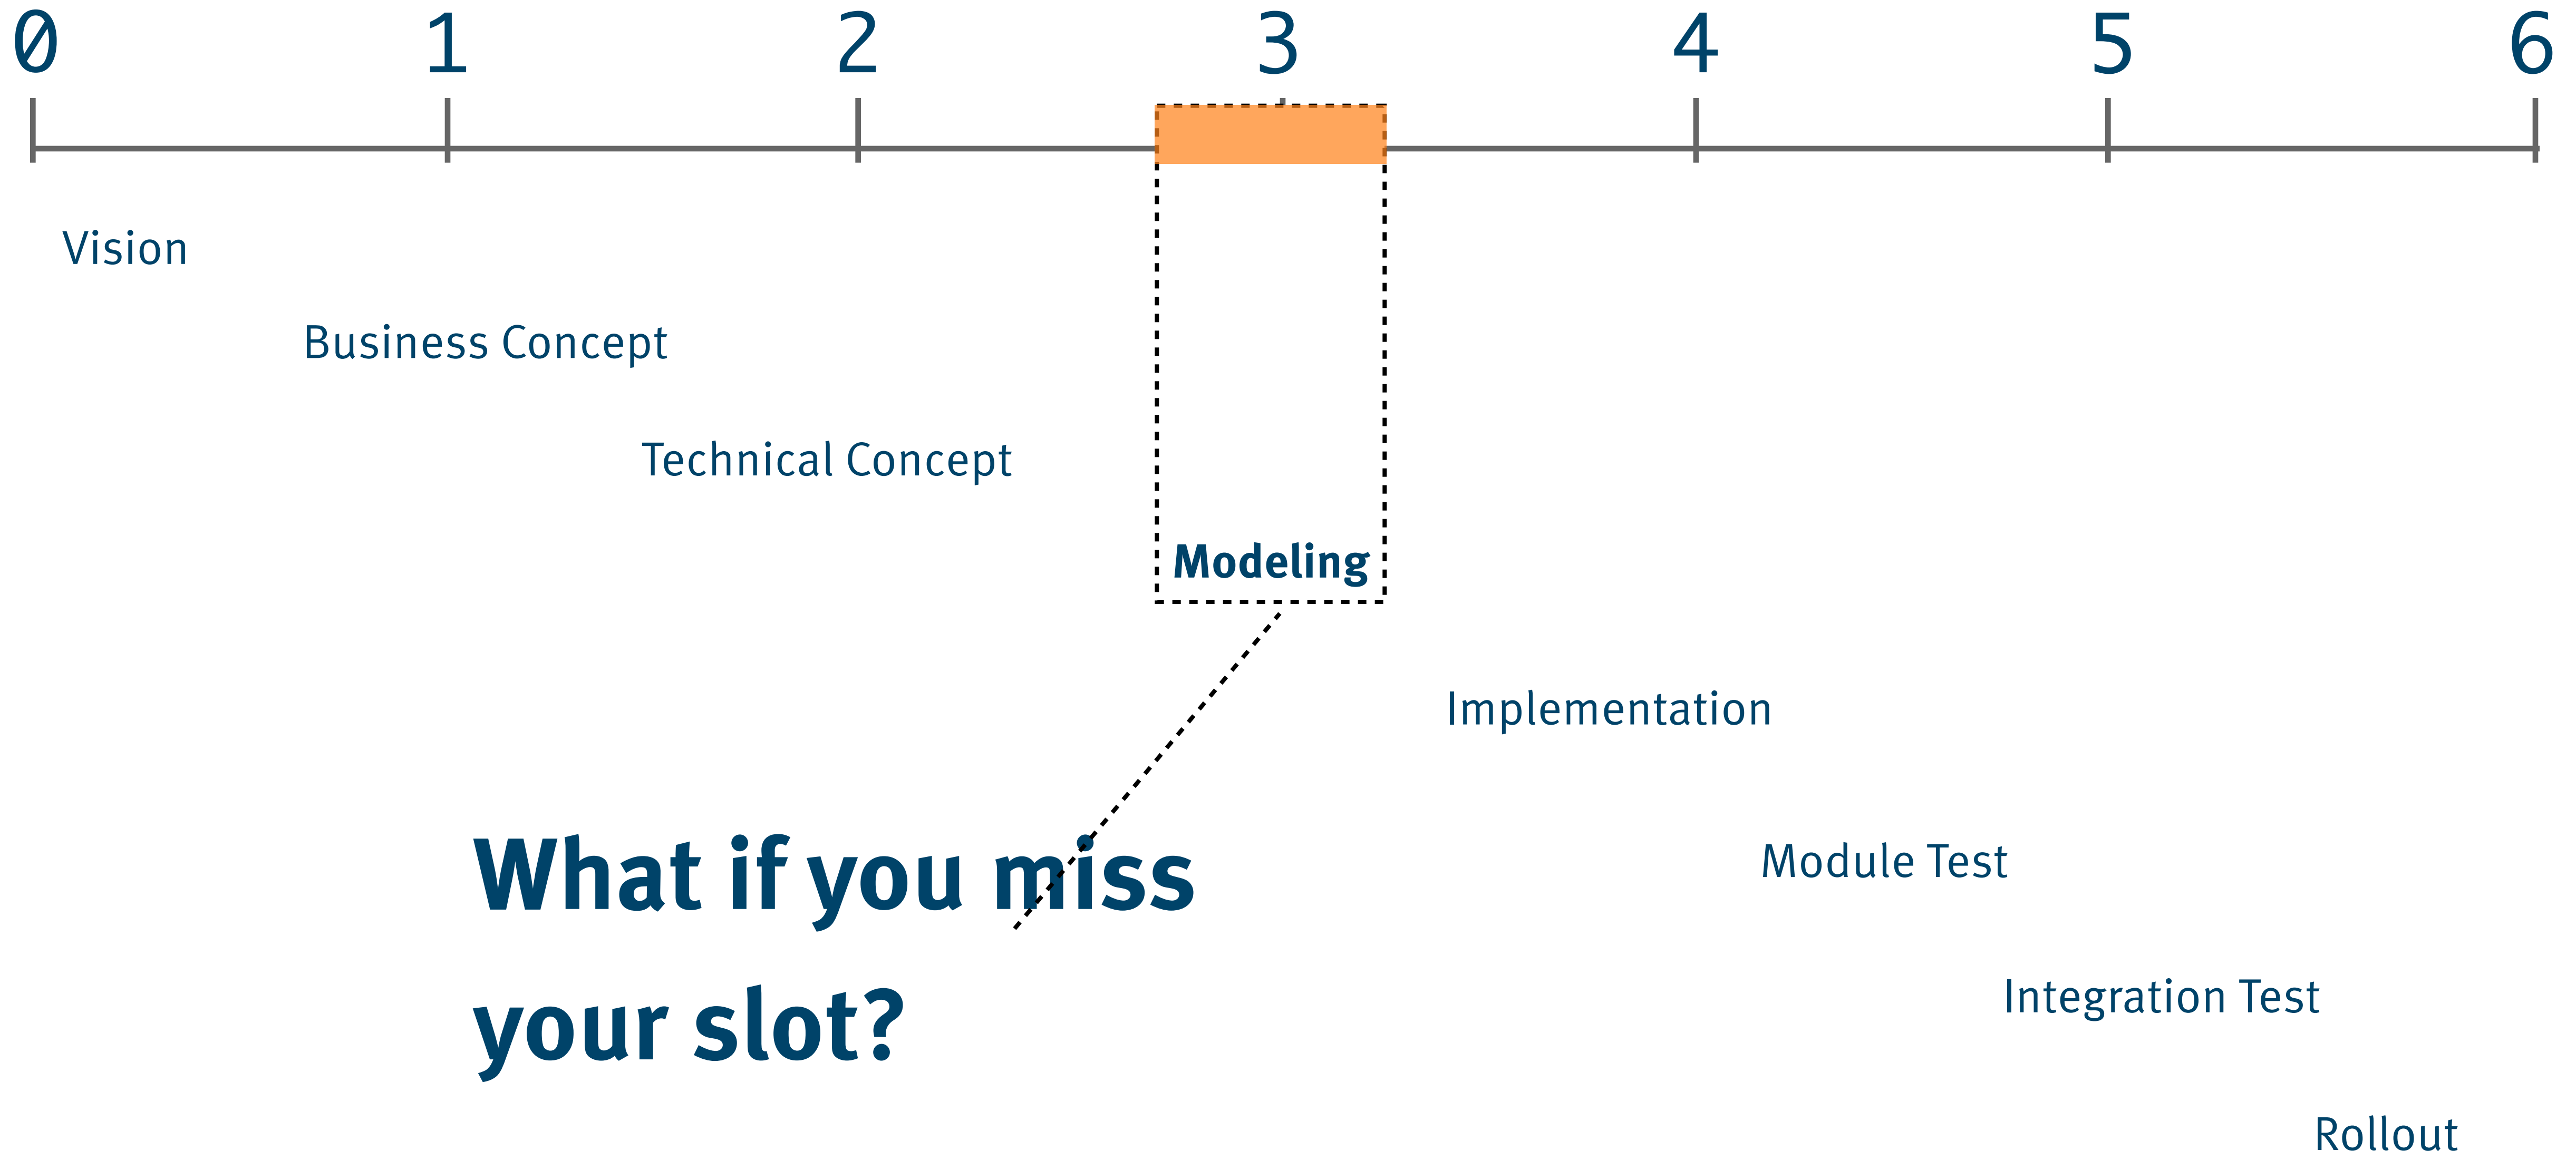

# Context

**Large-scale insurance system**

**Model-driven development**

**› 100 developers**

**2 Releases/year**

Model Name	New Name (Meaning)	Description	Release Introduced
taxClass	regionCode	...	10.3
...			

# **Lessons learned**

**Centralized responsibility hurts**

**Faced with too much rigidity, a way around the rules will be found**

**Just because you're used to it doesn't mean it's acceptable**

# **Formalism and Common Sense as Orthogonal Concepts**

# Context

**Telecommunications OSS platform**

**Support new devices without code changes**

**› 100 developers**

**› 3 countries**

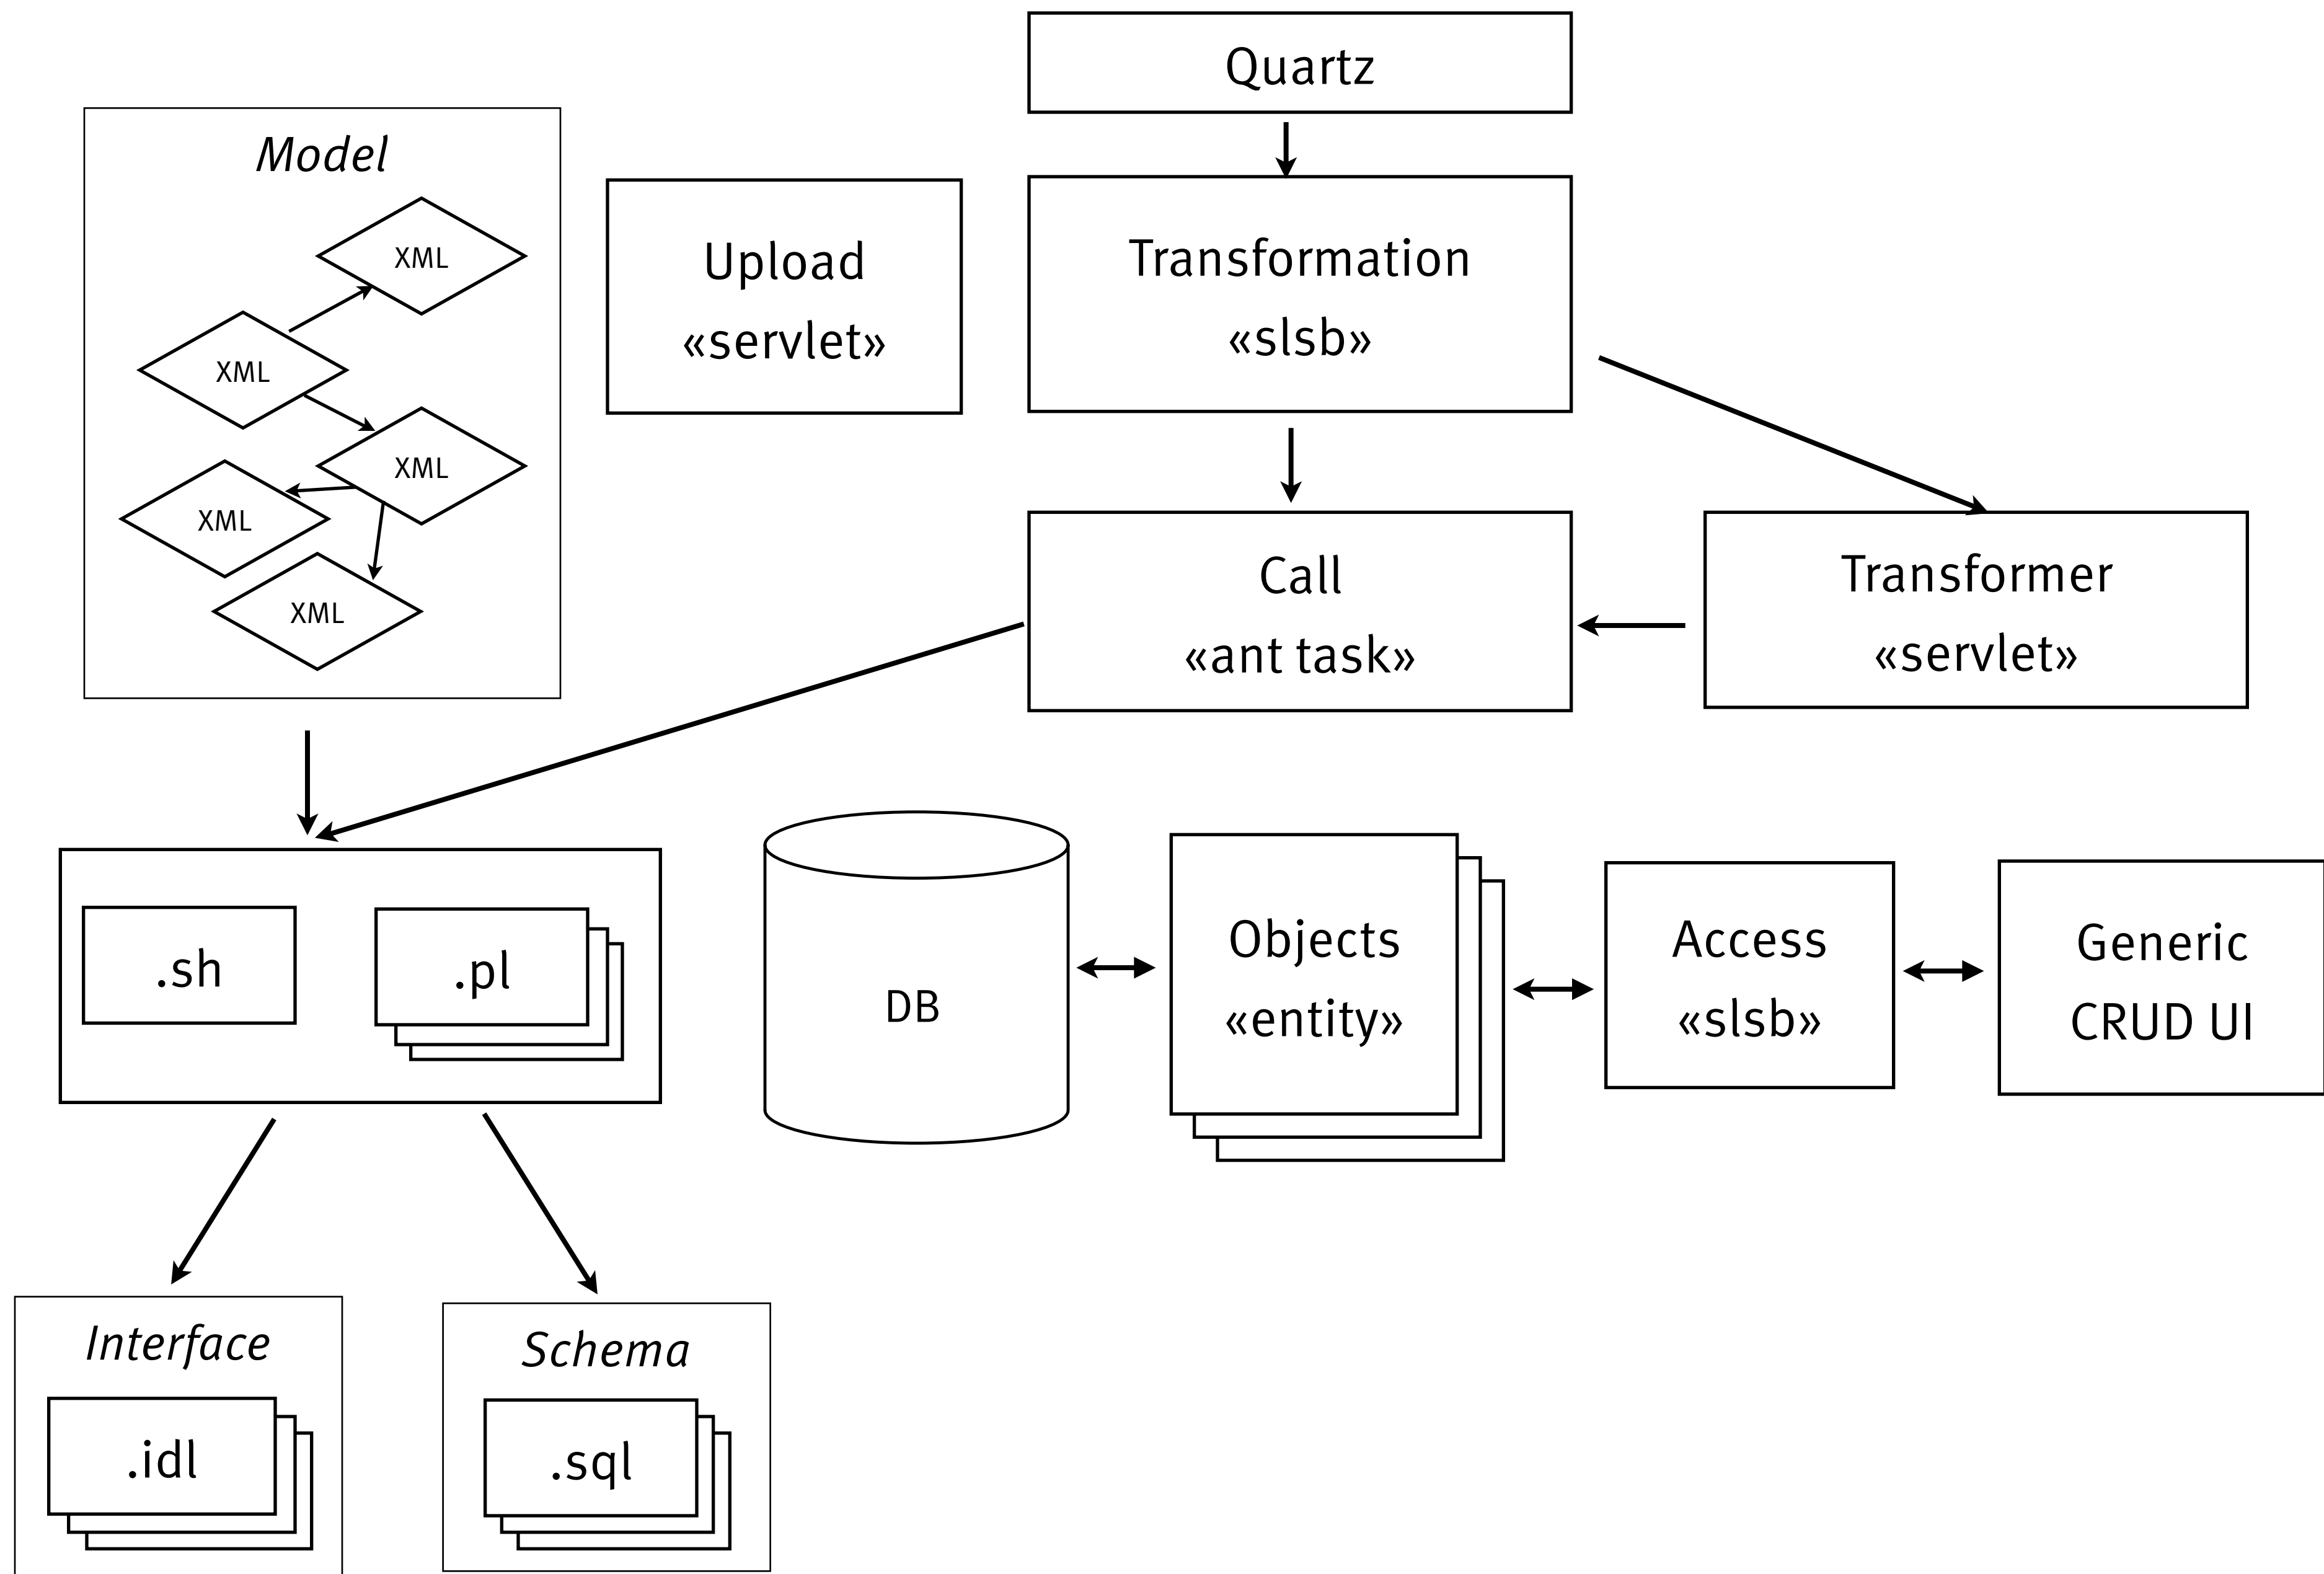

# Warning

**((Meta) meta) models) are a perfect means to waste time, on a highly inspiring intellectual level, without any results for years**

**Highly complex methodology, tool support, agreement processes**

**Consultants with *exclusive* pricing strategies**

# **Lessons learned**

**If it makes you want to scratch your eyes out, you might not  
want to do it**

**Sometimes constraints need to be fought**

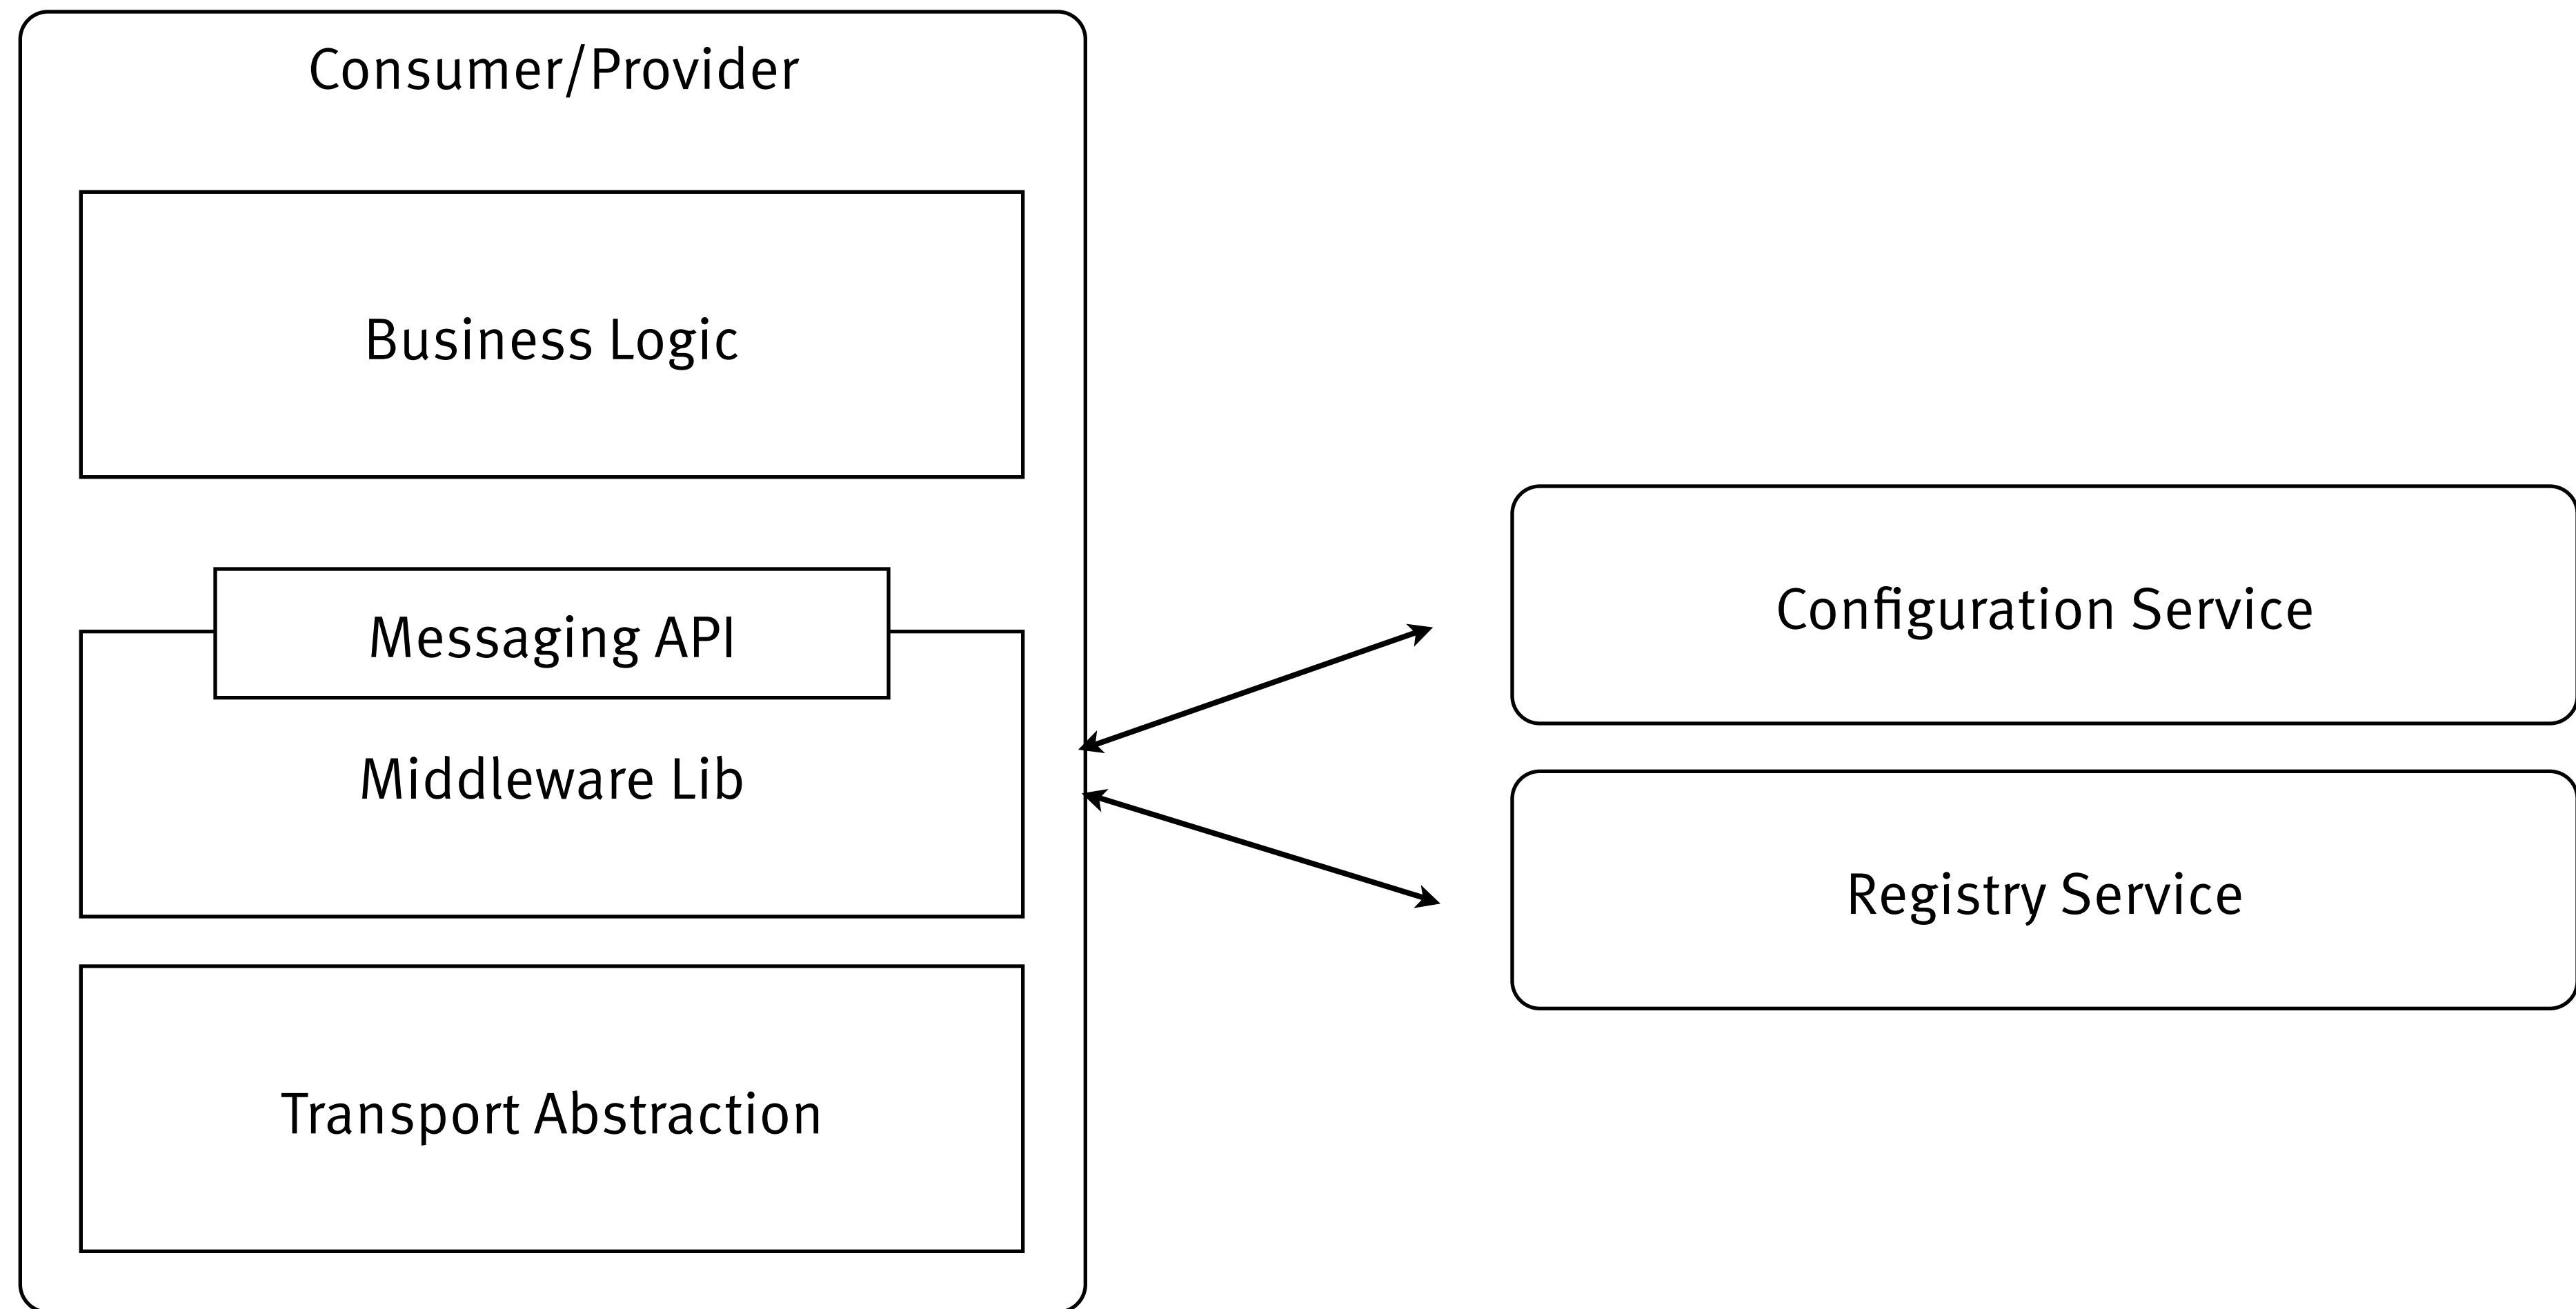

**Beware all things “meta”**

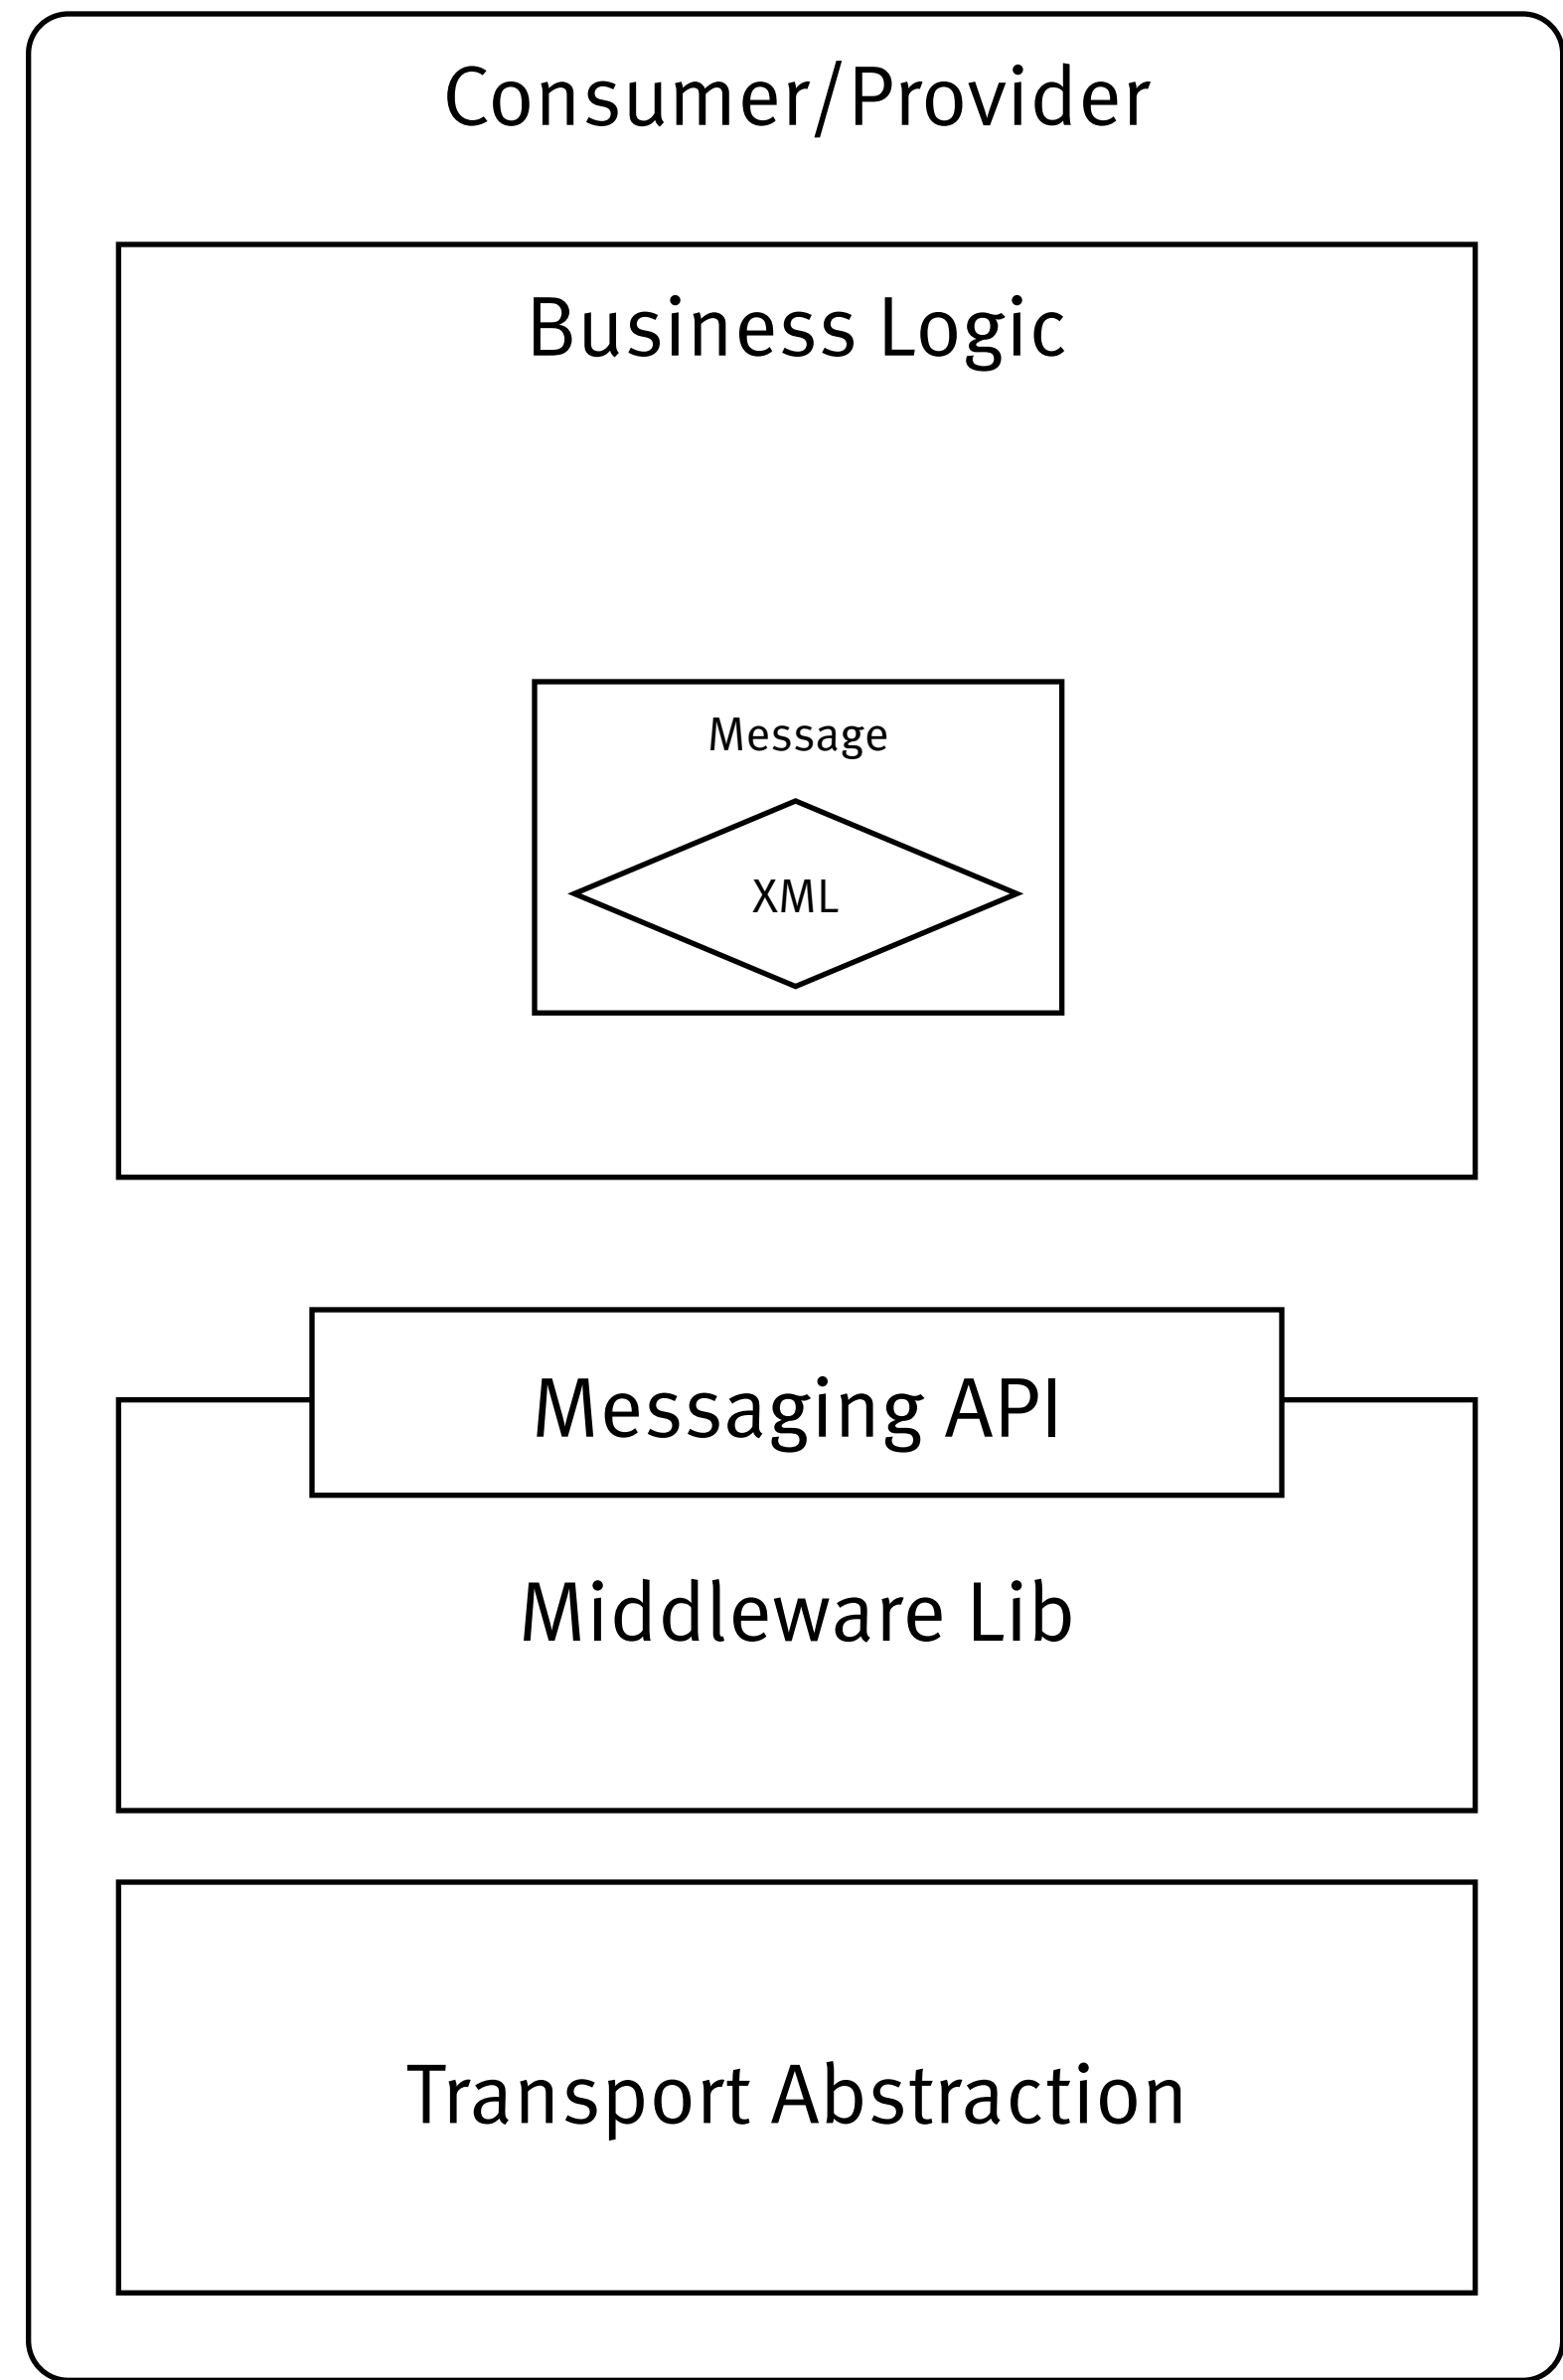

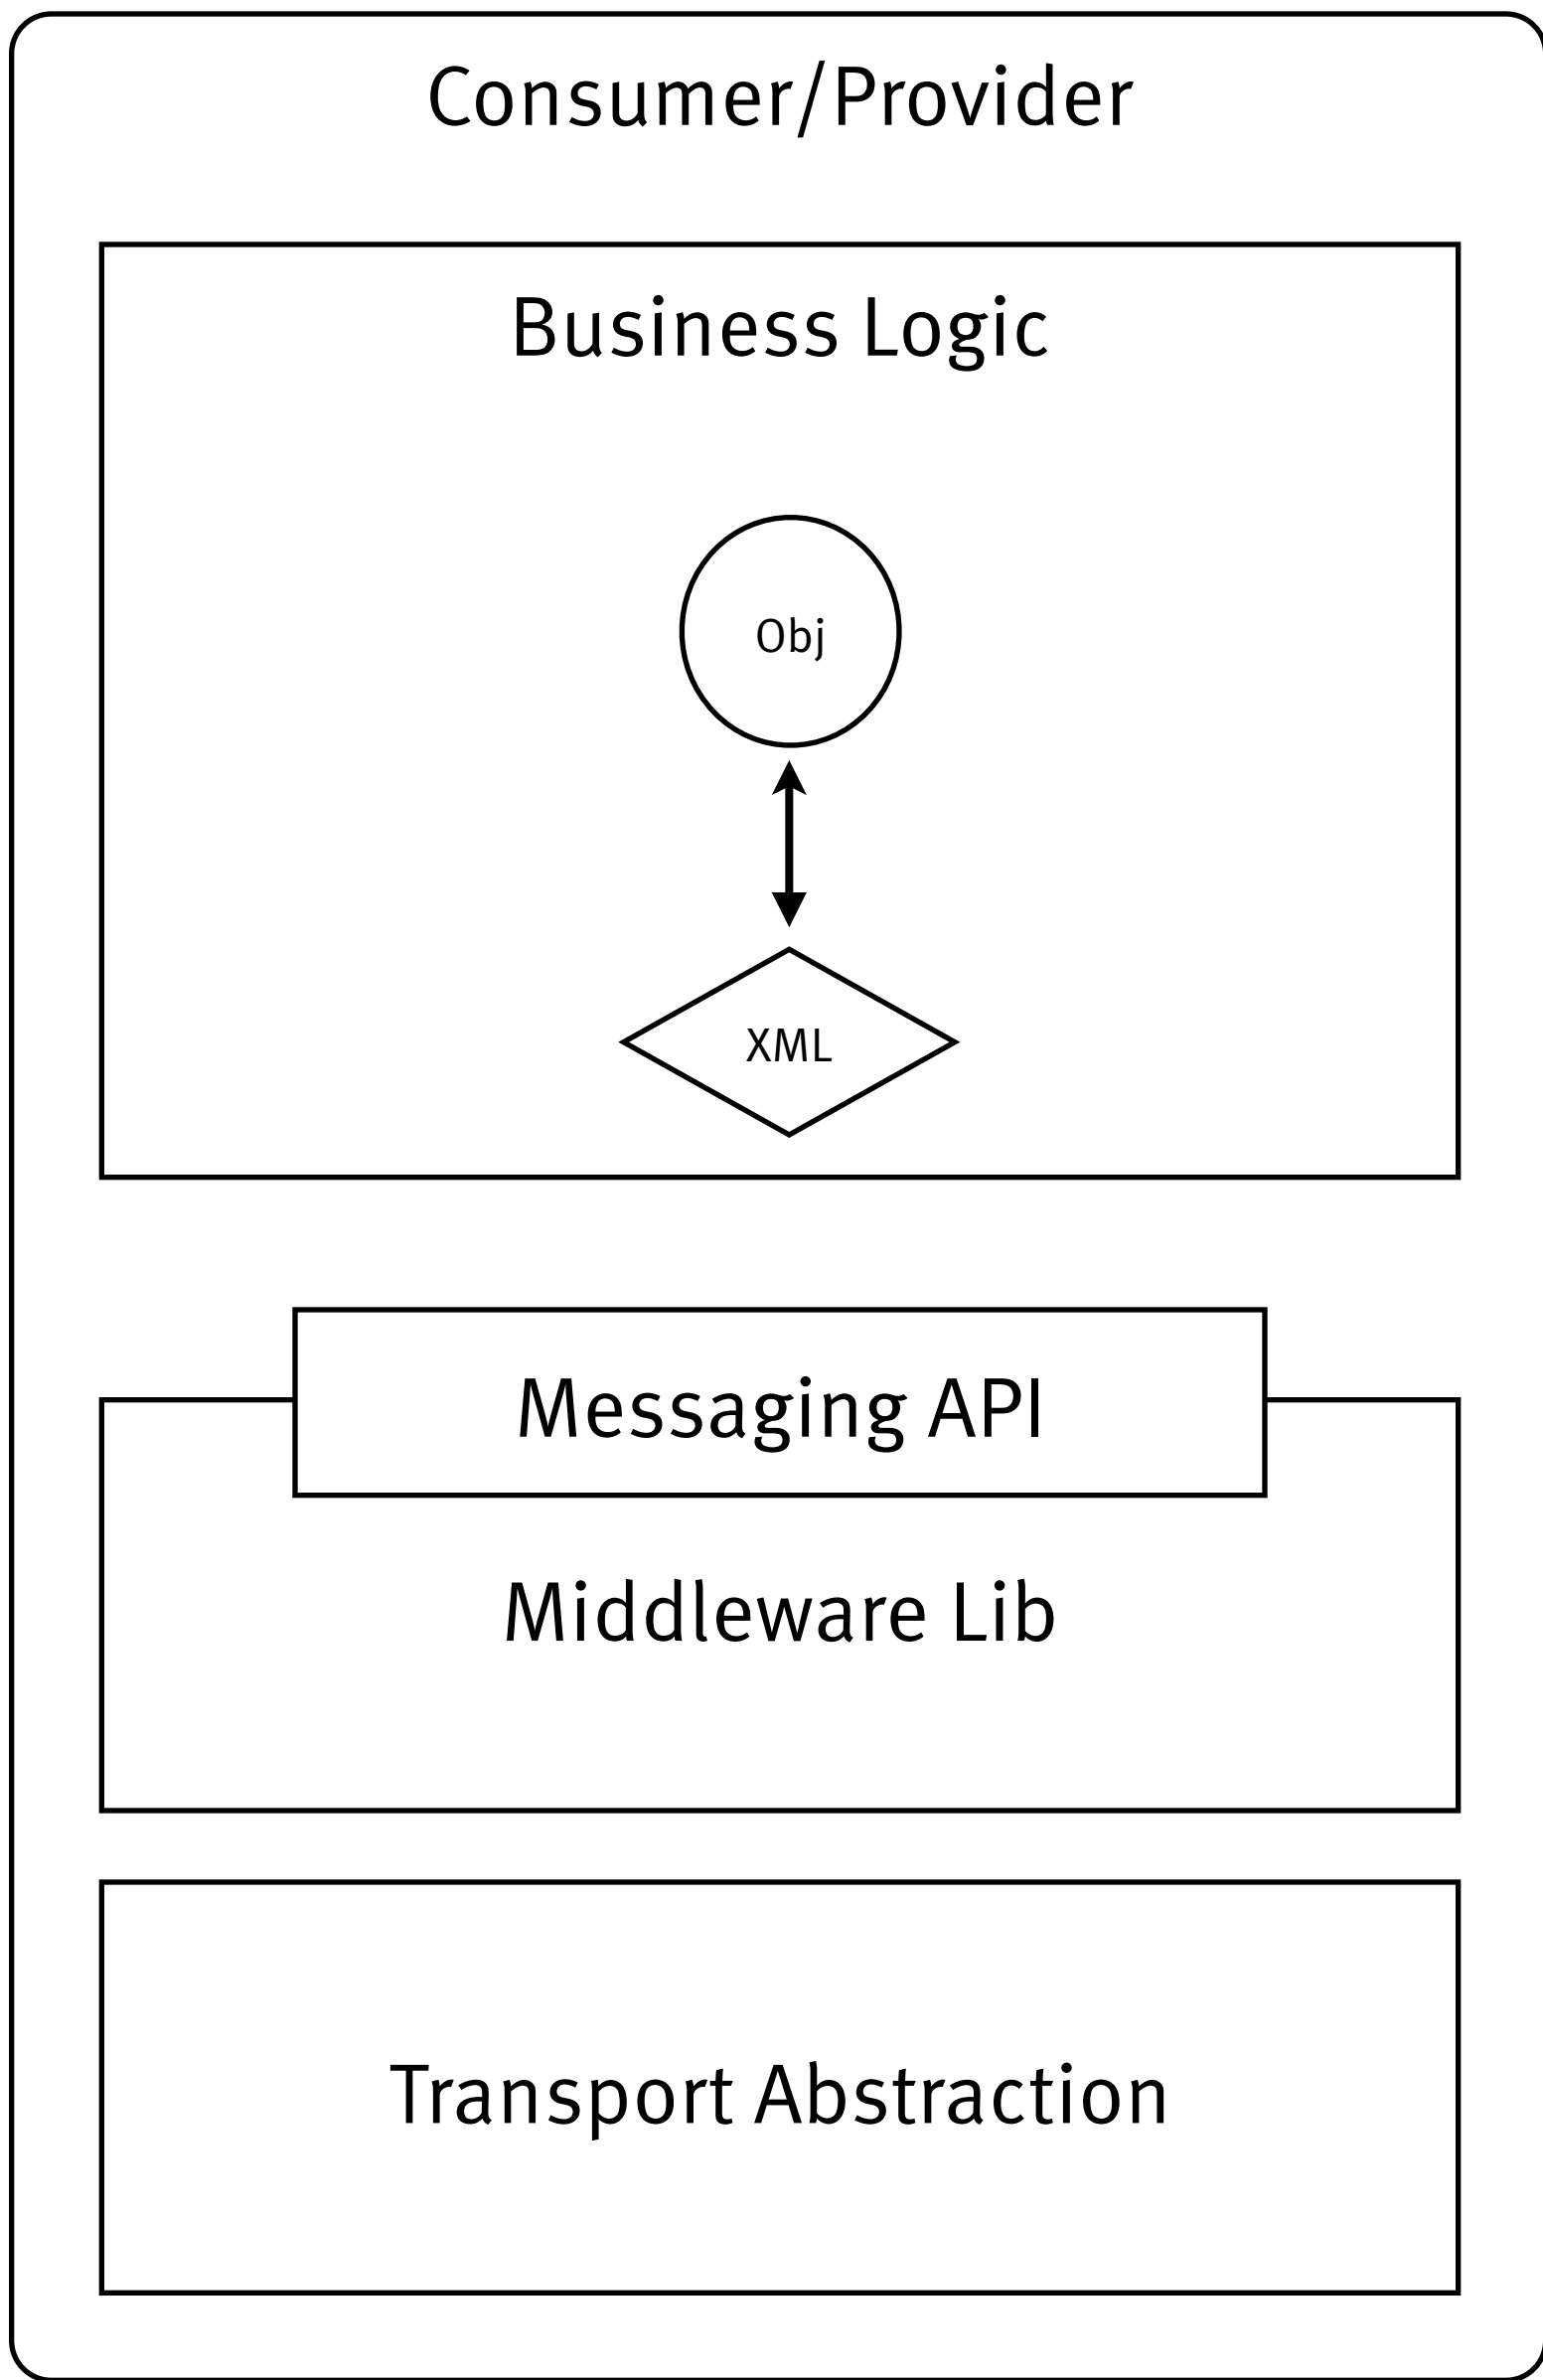

# The Perils of Being Smart

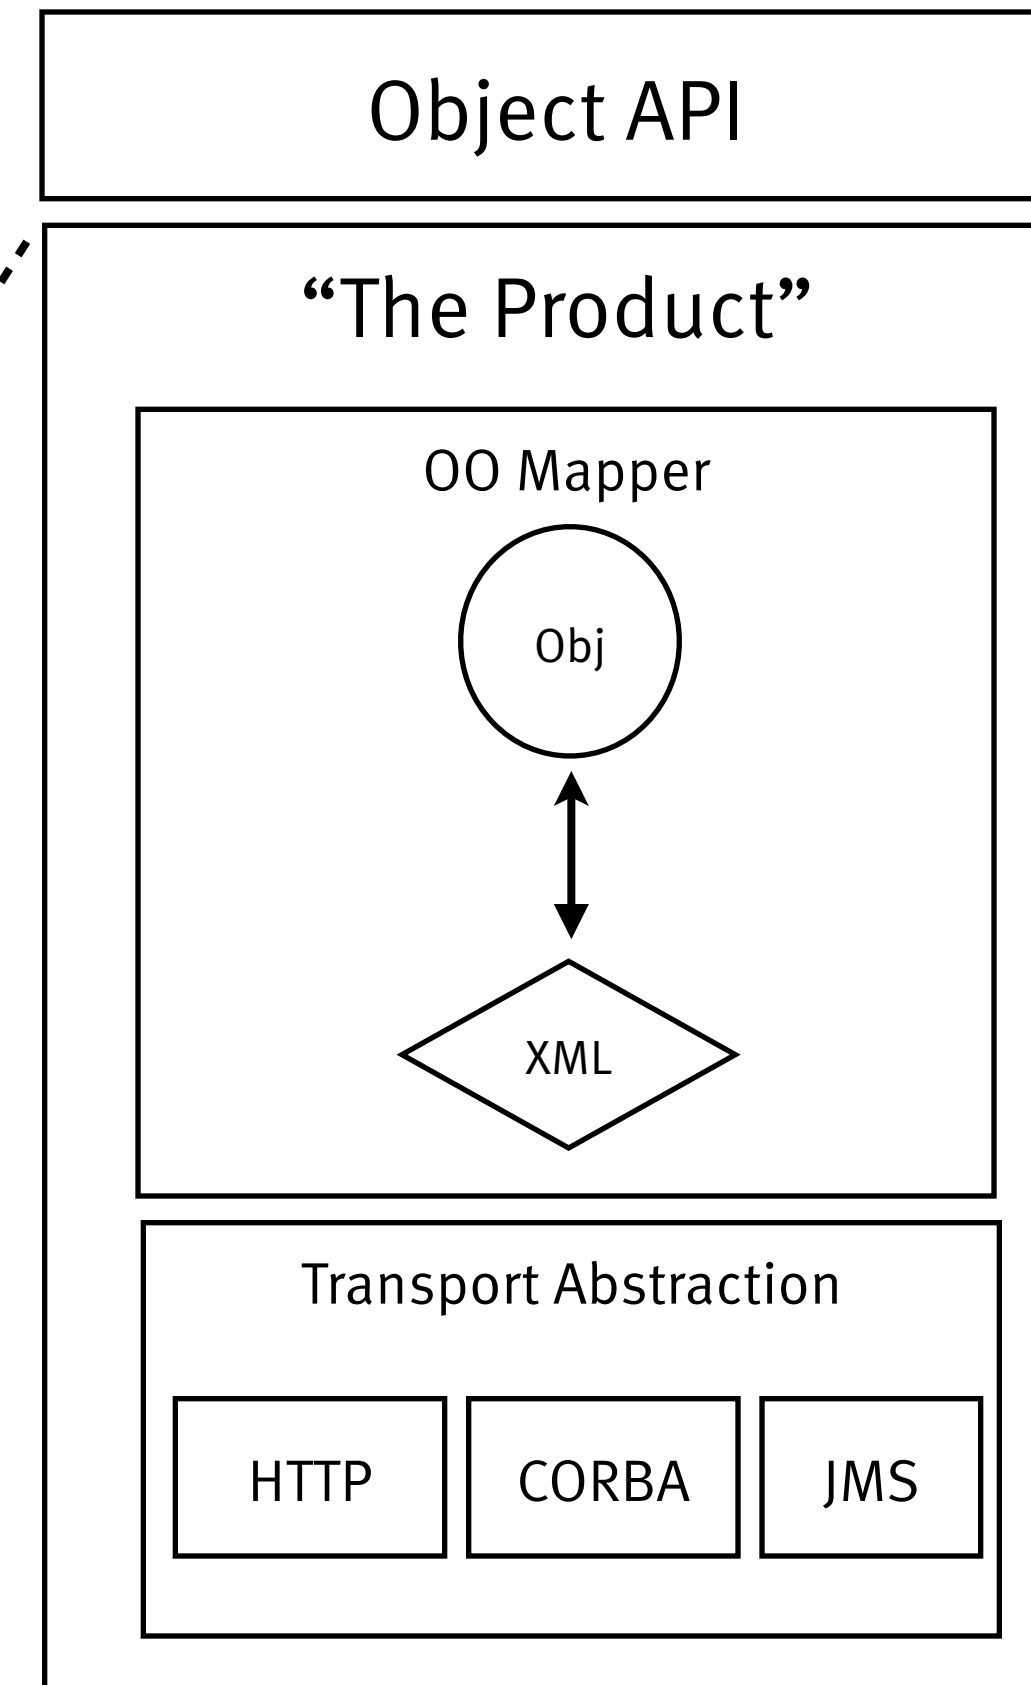

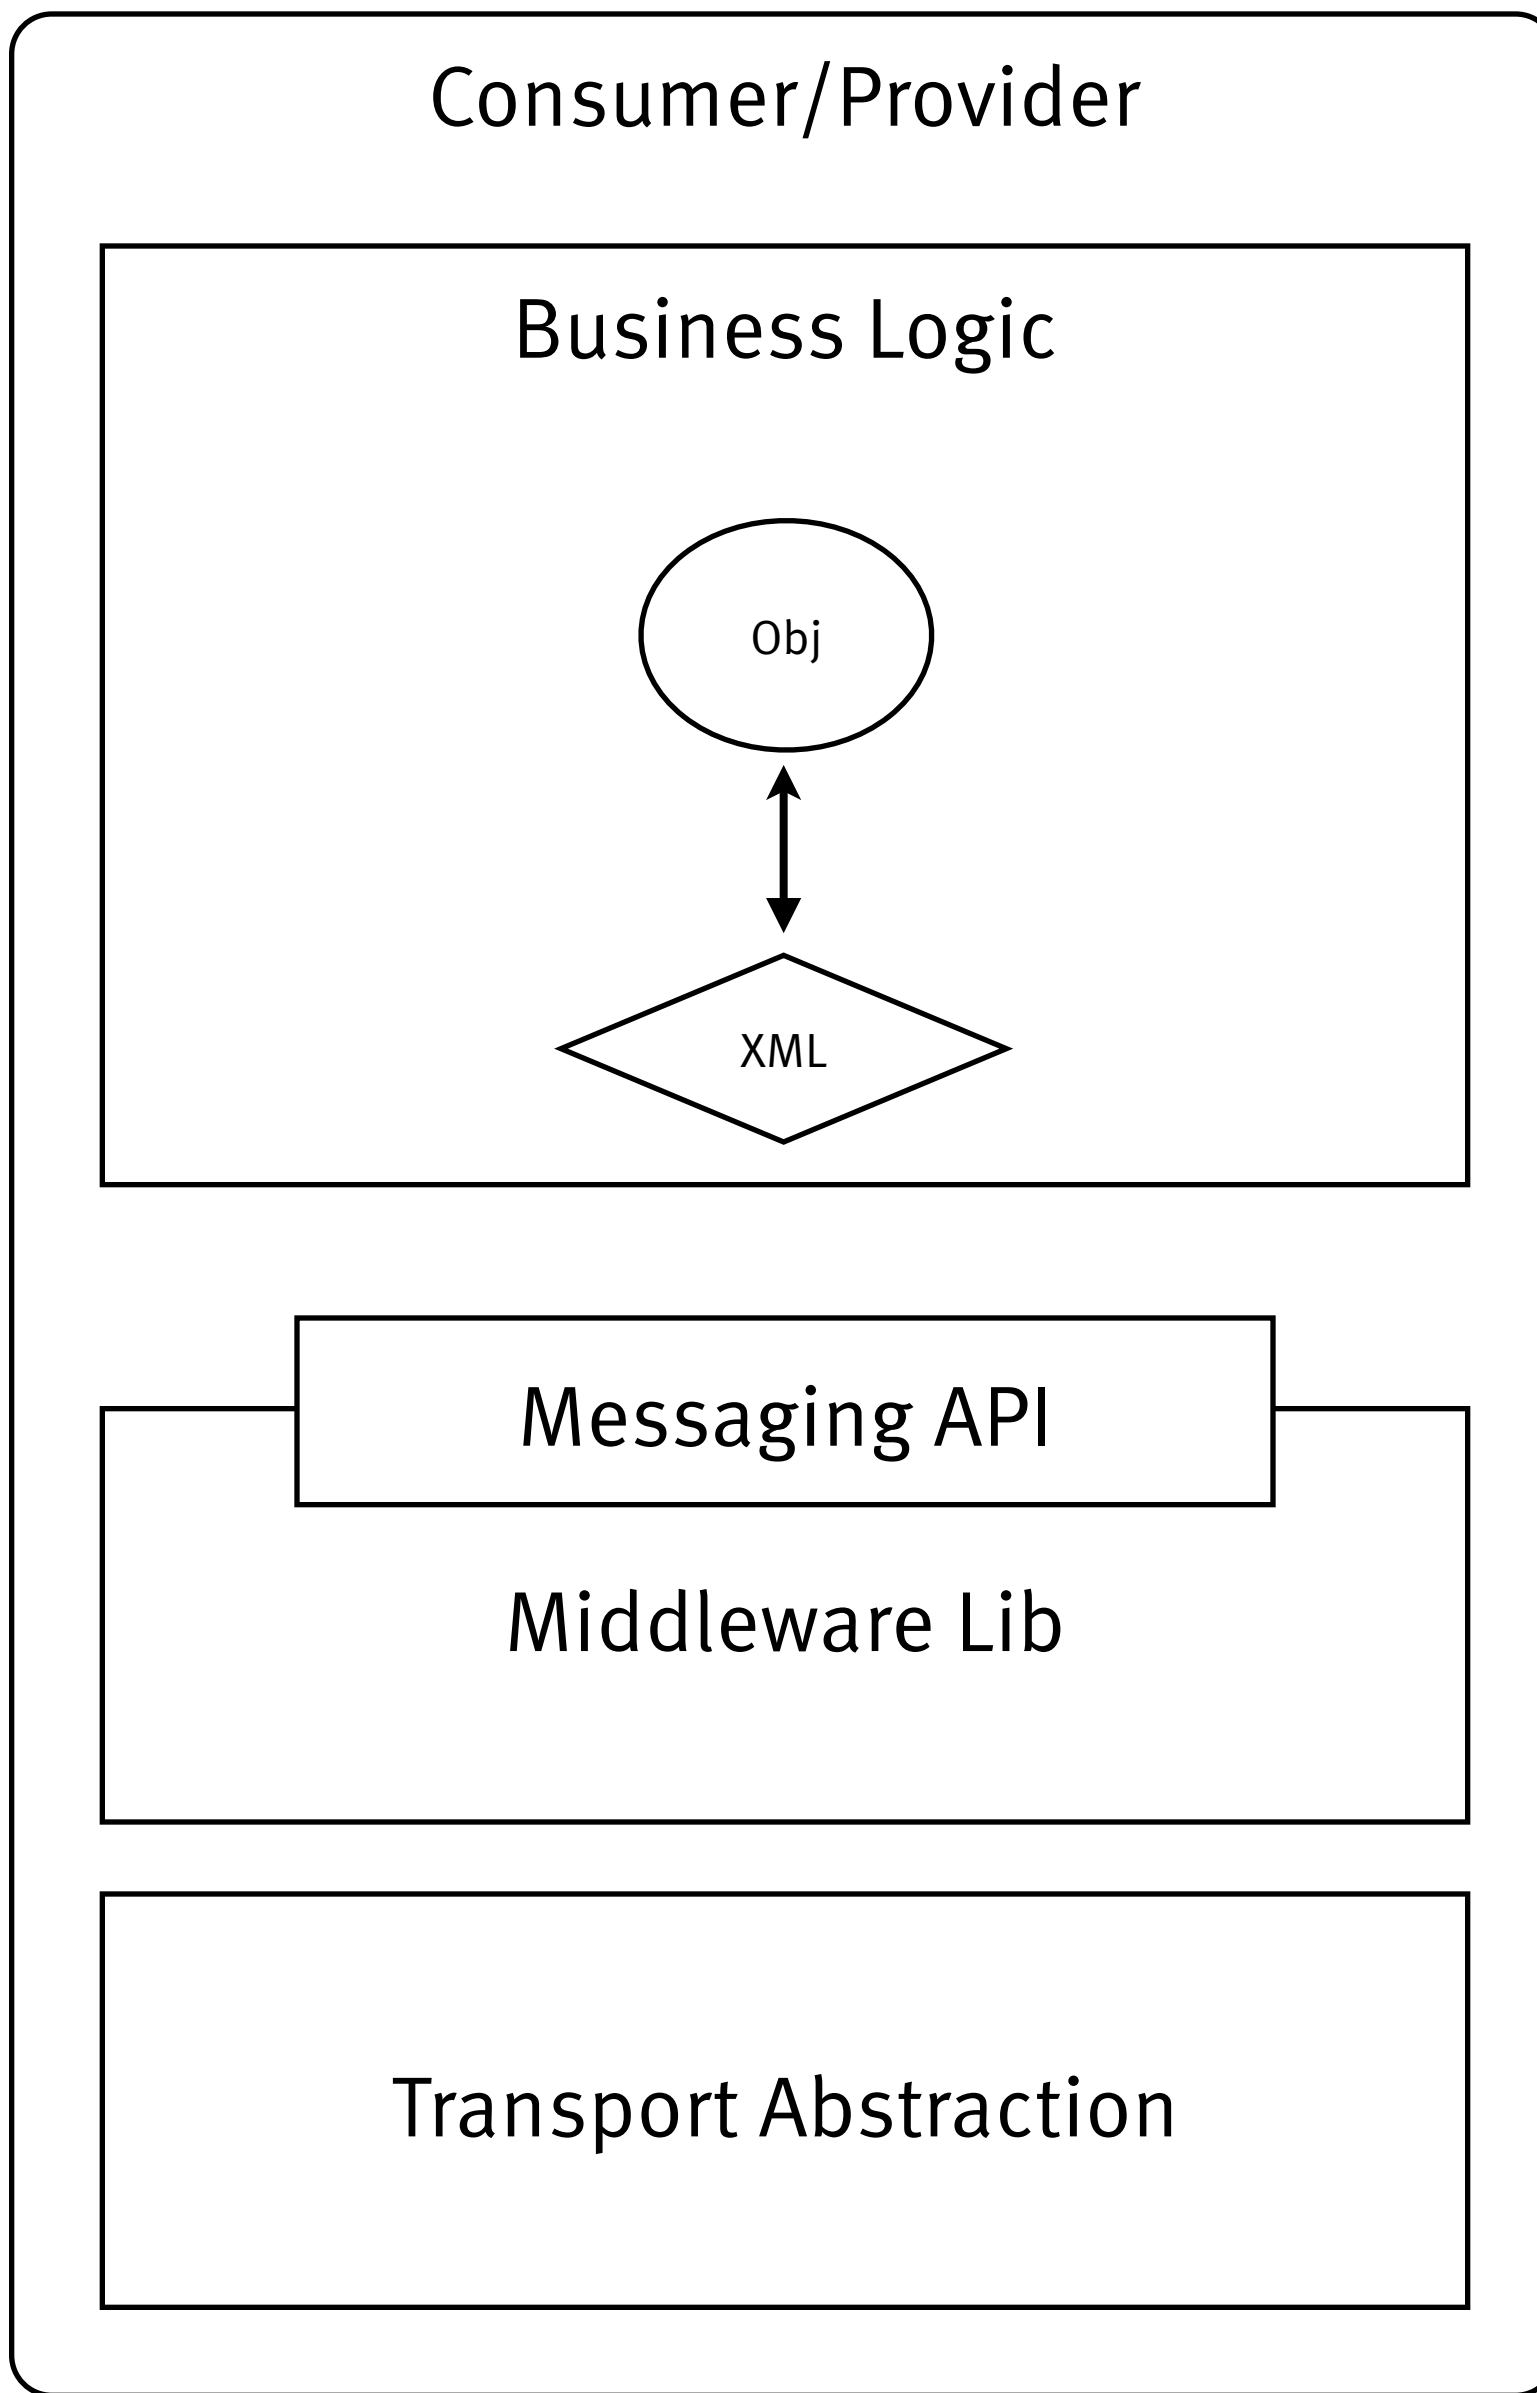

# Context

**Complex enterprise-wide SOA effort**

**Custom-built “lightweight” middleware**

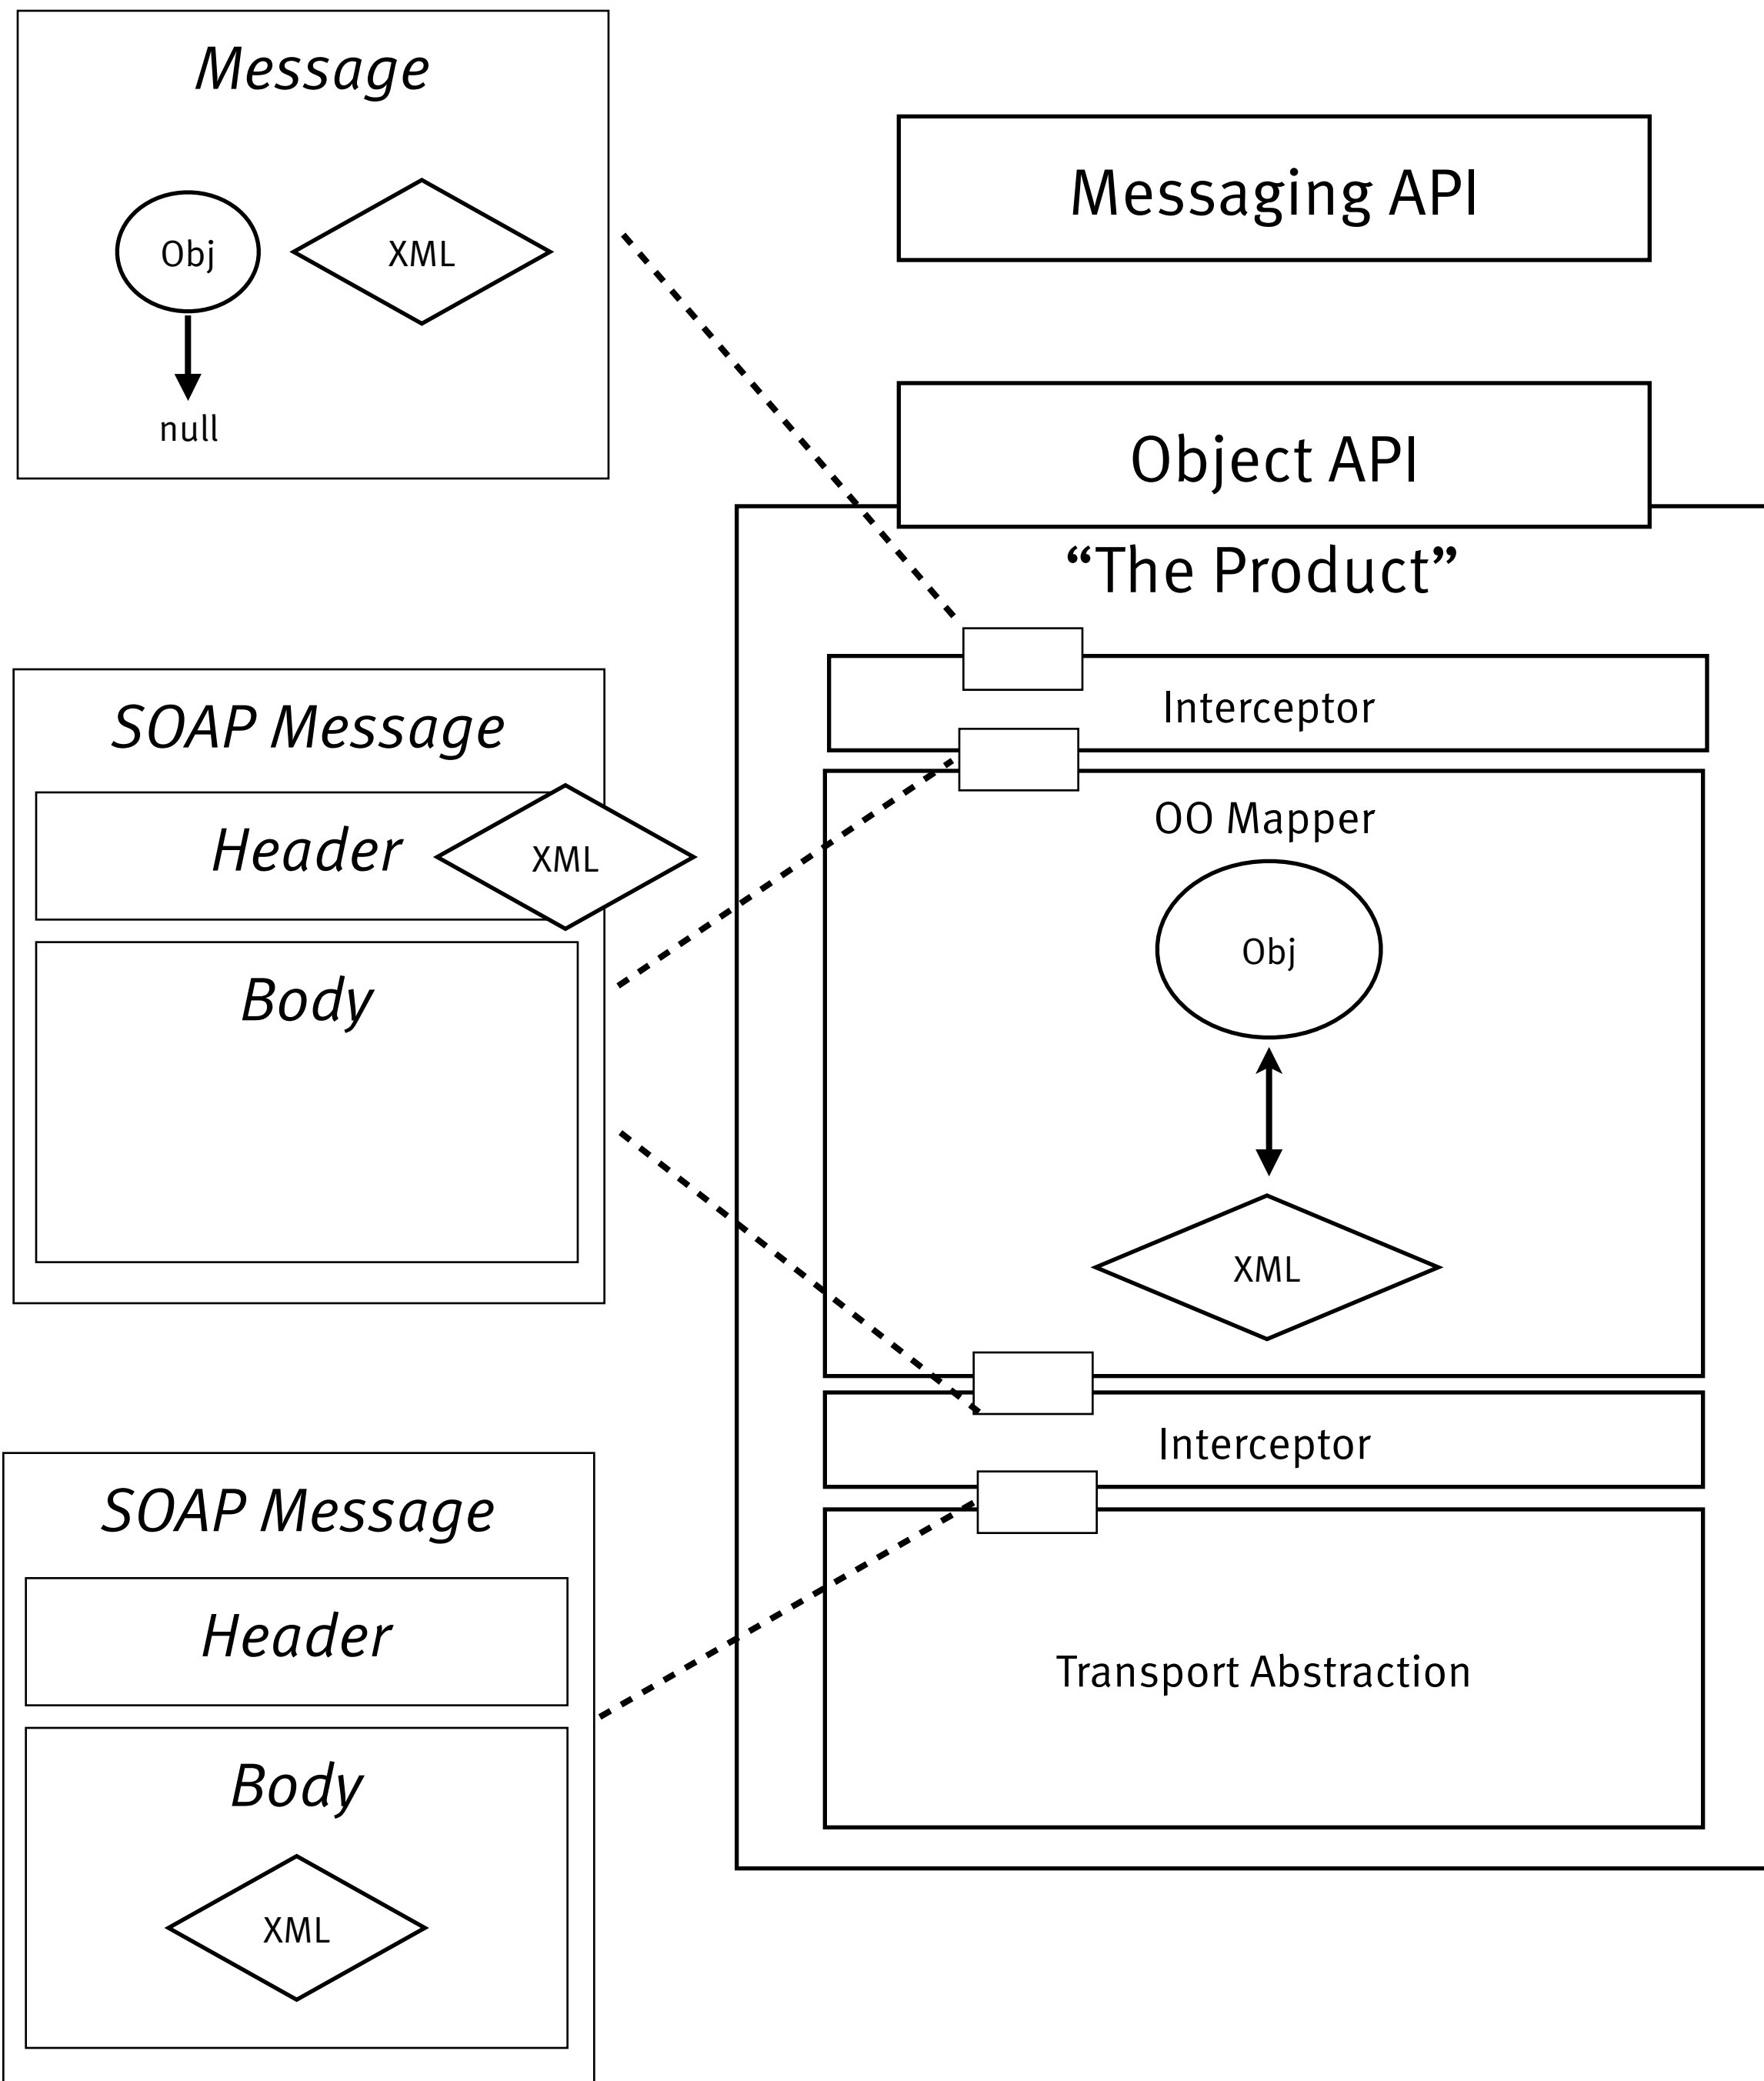

# **Lessons learned**

**Fight the madness**

**Tunneling is the root of all evil**

**Don't be too smart**

# Non-extensible Extensibility

# **Context**

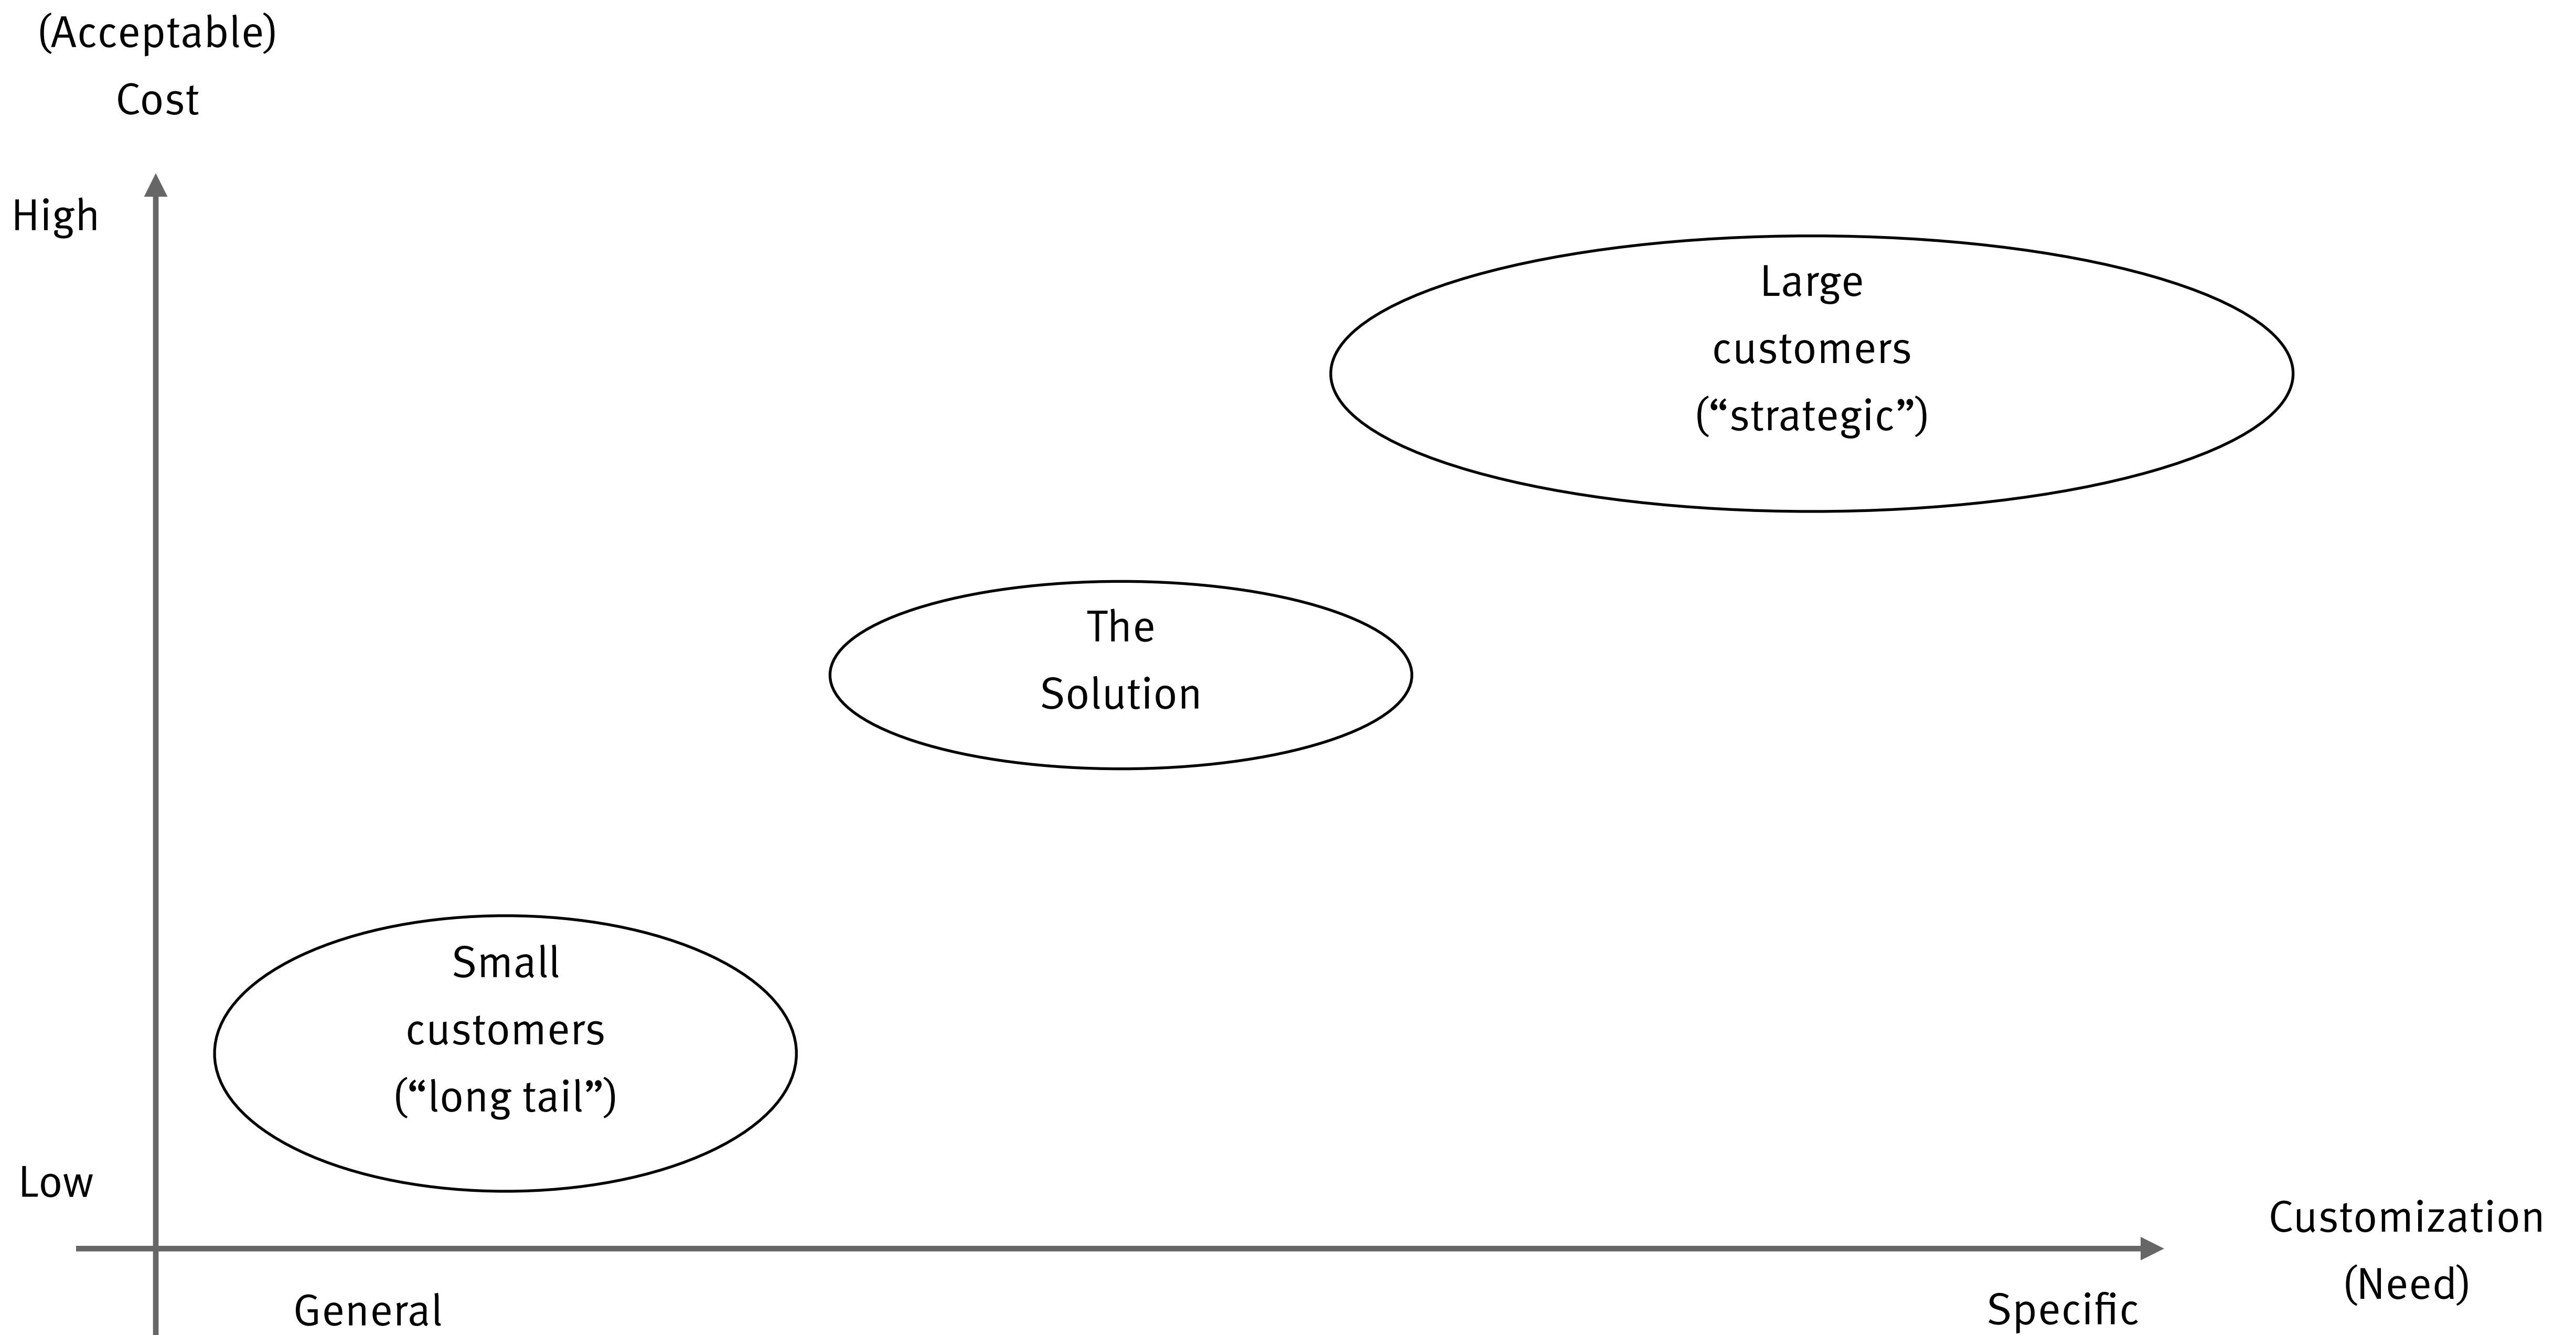

**E-Commerce (retail) provider**

**Global customer base**

**Catalog/CMS/Shop/Fulfillment**

**Multi-tenant**

**Highly customizable**

# **Lessons learned**

**Don't be all things to all people**

**Sometimes specific code is preferable**

**Saying “no” might help**

# Summary

**Never-ending supply of  
{war stories | catastrophes | disasters}  
seems guaranteed**

**Advice:**

# **1. Give Feedback**

## 2. Reflect

# 3. Iterate

# Q&A
