sleeping deeply**

Behaviour-Driven Development

An Example of an Example

Given Fred has bought a microwave

And the microwave cost £100

When we refund the microwave

Then Fred *should* be refunded £100.

Examples

Given a context

When an event happens

Then an outcome *should* occur

GROW

GROW

Options /
Way Forward

Given a context

When an event happens

Then an outcome *should* occur

PDCA

Plan

Do

Check

Act

Acceptance criteria vs. Scenarios

Given Fred has bought a microwave

And the microwave cost £100

And the microwave was on 10% discount

When we refund the microwave

Then Fred *should* be refunded £90.

Acceptance criteria vs. Scenarios

Given an item was sold
with a discount

When a customer gets a refund

Then he should only be refunded
the discounted price.

Acceptance criteria vs. Scenarios

Items should be refunded
at the price at which they were sold.

Well-formed outcomes

Sensation

Vision

Hearing

Smell

Taste

Examples

Given Jane would like some tools
for changing her life

When she comes to my talk

Then she *should* leave happy.

“leave happy”

Will it actually happen
that way?

Acceptance criteria vs. Scenarios

I want people
to have happier lives
because of this talk.

Outcome
vs.
Impact

down

Cynefin

Trying
things
out

Talking through outcomes works
really well...
...hereish.

Is there a **context** in which
this event will create
a different **outcome**?

Examples

Given Jane would like some tools
for changing her life

When she comes to my talk

Then she *should* leave happy.

Examples

Given Steve thinks he can't change his life

And he can

When he comes to my talk

Then he *should* leave feeling
troubled and uncertain.

Examples

Given I am a deep sleeper

When I fly to Chicago

Then I *should* still wake refreshed
and ready to speak next day.

Is this the only **outcome**
that matters?

If we could achieve it with **pixies**,
would it be enough?

Examples

Given Steve thinks he can't change his life

And he can

When he comes to my talk

Then he should leave feeling
troubled and uncertain

And he should get in touch

The language of uncertainty

“Should”

Examples

Given Dan knows more about BDD
than I do

When he comes to my talk

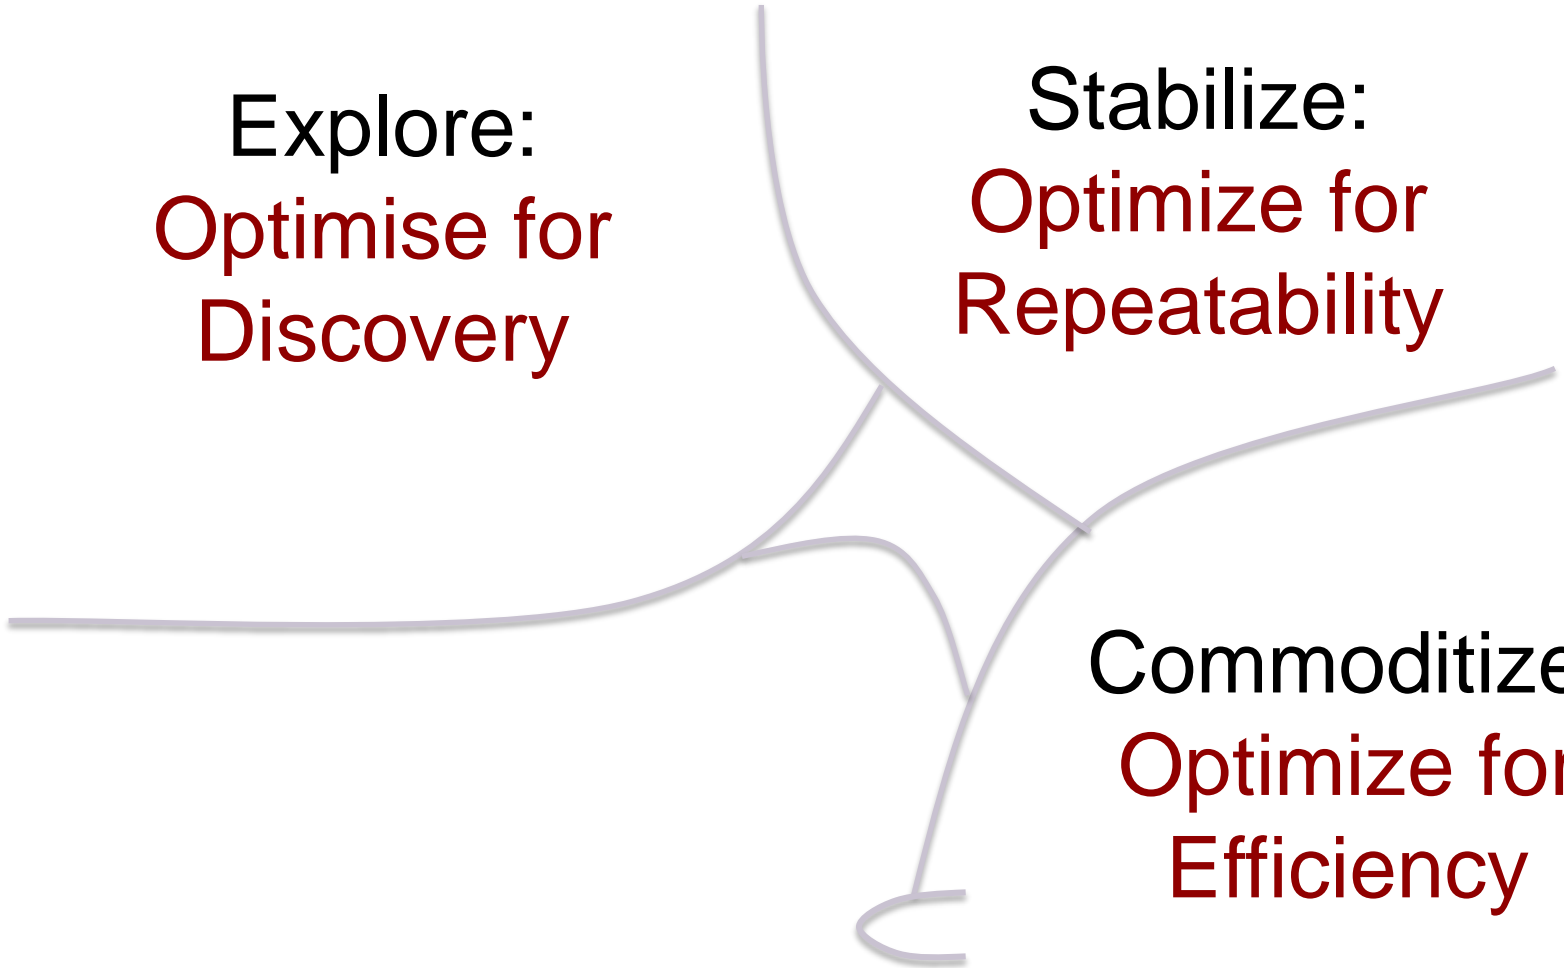

Then ...?

Dan North's "Three Ages"

Explore:
Optimise for
Discovery

Stabilize:
Optimize for
Repeatability

Commoditize:
Optimize for
Efficiency

Still learning...

Panic:
Optimise for
Survival?

Innovation

GROW

Options /
Way Forward

Given a context

When an event happens

Then an outcome *should* occur

Feature Injection

Vision

Makes money

Saves money

Protects money

Goal

Incidental
Stake-
holder

Needed
to go live

Capability

Users
can achieve
a business
outcome

Feature

User interface
component
which enables
a capability

Story

A slice through
a feature
to enable
faster feedback

Scenario

An example
of how the system
might behave
from a user
perspective

Code

Developer

Ideas turning into
reality

Vision

Goal

Capability

Feature

Story

Scenario

Code

Hunt the value
aka
Why?

Goal
