

What Can Hadoop Do for You?

@EvaAndreasson | Cloudera

2014

Agenda

- Why Hadoop?
- What is Hadoop?
- Common Use Cases & Real World Examples
- Q&A

Our Industry is Data Challenged!

Volume of Data is Growing Exponentially

- Traditional data storage do not scale
 - Pre-mature archiving, limiting timely access
 - Storing minimal data, limiting insight

Increased Demands on Processing Efficiency

- Volume increases, SLAs stay the same
- Pace of data generation increasing

New Data Types Demands Flexibility

- New data types generating valuable information
 - Sensor, Mobile, IoT, Geo, Images, Videos, Voice...
- Traditional systems suffer from inflexible data models
 - Data modeled for questions we know
 - Remodeling = \$\$\$\$

Organizations Need to Rethink Data!

Practical Driver

- Organizations seek to scale data storage and processing cost-efficiently
 - Do what I usually do, but on larger data sets
 - Do complex queries within SLAs

Competitive Driver

- Enterprises seek to ask bigger questions
 - What *new insights* can we achieve by combining data silos?
 - What else can we find by asking questions over new types of data?

There is no box!

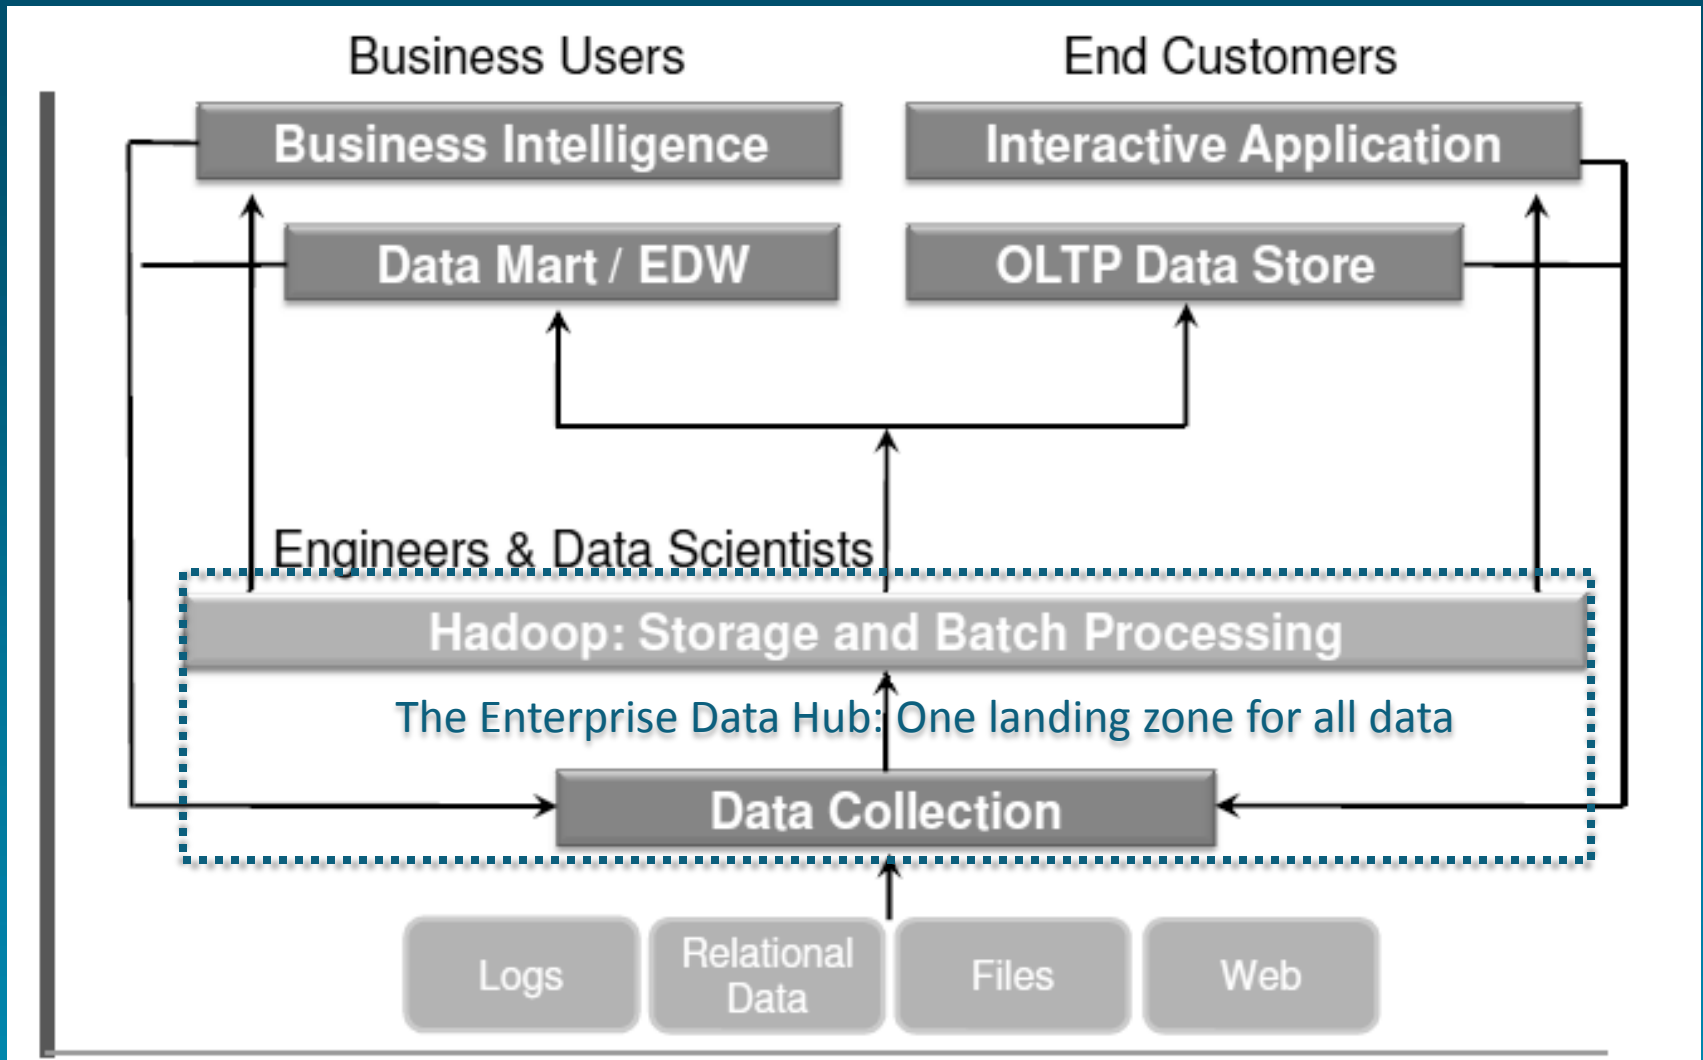

Hadoop Saves the Day! 😊

Hadoop as the Solution

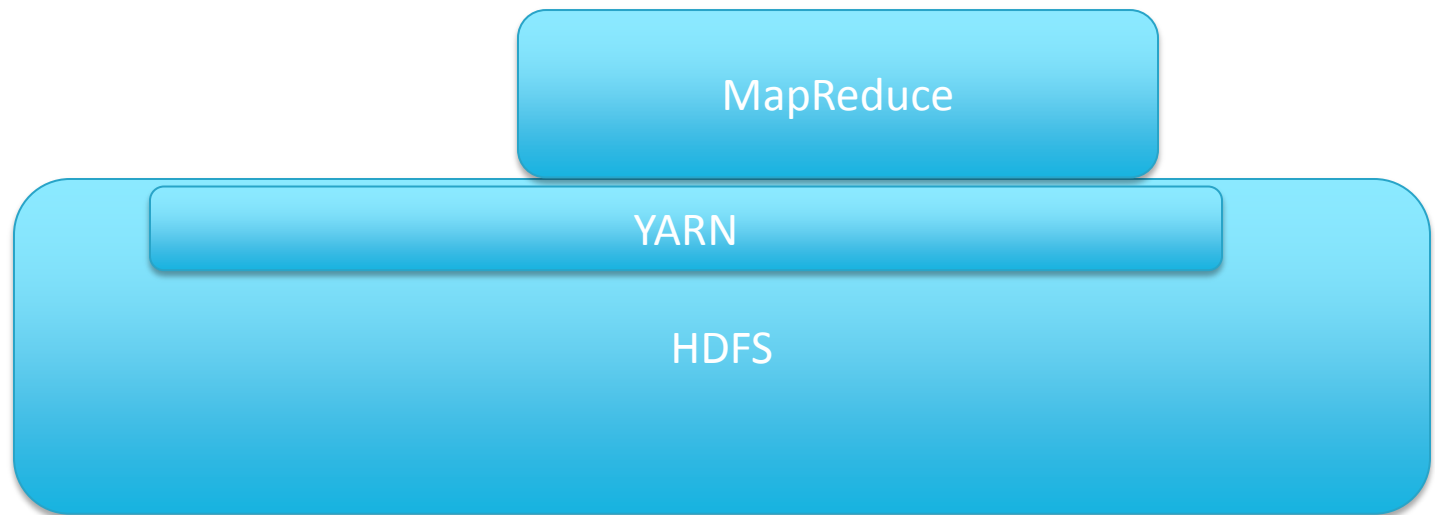

- Distributed, linearly scalable parallel processing AND storage
 - Data stored in equally sized chunks
 - Distributed and replicated across common hardware
 - Parallel processing
- Structure at query time, not at storage time
 - Ask anything at any point

Organizations Use Hadoop as an Enterprise Data Hub

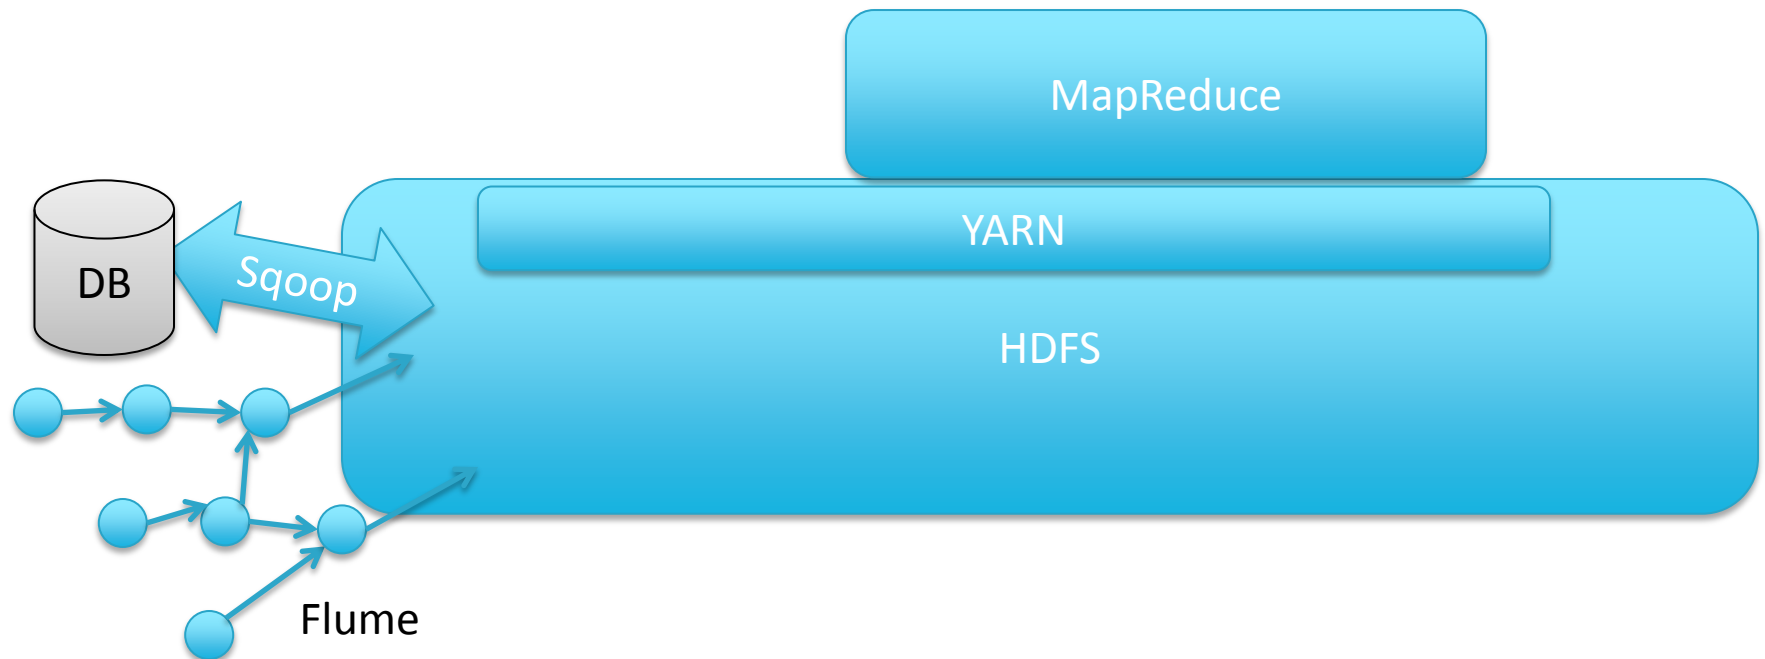

Apache Hadoop and its Ecosystem 101

The Hadoop Ecosystem – Explained!

Use Cases

Top 3

- Offload ETL
 - Do more data processing within the same time window
- Enable an active archive
 - All data available at any time, interactively or in batch, to multiple audiences
- Ask bigger questions
 - Combine data silos or new data types for bigger insight (360 view use cases)
 - “Advanced analytics”

Lots of Interesting Big Questions

- Advanced analytics

- Event prediction
- Anomaly detection
- Customer profiling
- Recommendation engines
- Churn analysis
- Advanced image processing
- Genome sequencing
- Clickstream analysis
- Path & logistic optimization

How do we optimize our replacement logistics?

How do we do damage control cost efficiently?

Which product flavor should we invest in?

Why do we experience a decrease in customers?

How do we increase our online sales?

My Personal Favorites

- How do we quickly find paths to provide help to disaster areas?
- How do we prevent suicide?
- How do we reduce world hunger?
- How do we speed up the process of finding cures for cancer and other illnesses?
- How do we mitigate global warming?
- How do we improve education?

Summary

Why Hadoop?

- **Scalable**
 - Add hardware, and that's (almost) it
- **Cost efficient**
- **Flexible**
 - Structure at query time
- **It's fun!**
 - Cutting edge has an intrinsic value...

Plan Ahead

- **Knowledge?**
 - Get certified
 - Find a 3rd party, if recruiting is a problem
- **Real Need?**
 - Is your data too big or costly for current systems?
 - Does your business need insight across multiple data sets or new types of data?
- **Readiness?**
 - Organizational support and strategy?
 - Tools requirements and integration needs with existing environment?

To Learn More...

1. Read some good stuff
 - Buy any of the Hadoop books from O'Reilly
 - Read great info nuggets at blog.cloudera.com/
2. Play on your own
 - demo.gethue.com
 - Cloudera QuickStart VM
 - <https://ccp.cloudera.com/display/SUPPORT/Cloudera+Manager+Free+Edition+Demo+VM>
 - View the howto videos at gethue.com
3. Get help and training
 - Join cdh-user@cloudera.org
 - Visit cloudera.com/content/dev-center/en/home.html
 - Get trained and certified by university.cloudera.com
4. Contact us
 - eva@cloudera.com / @EvaAndreasson
 - On-line contact form
 - <http://cloudera.com/content/cloudera/en/about/contact-us/contact-form.html>
