Conference: Sept 14-15 / Workshops: Sept 16-18, 2015

Program Chair & Keynotes

Adrian Cockcroft
Program Chair & Battery Ventures CTO, Former Netflix Architect

Ines Sombra & Adrian Colyer
Ines organizes Papers we Love SF Meetup and is an Engineer at Fastly and Adrian Colyer, Author of the "Morning Paper" present Papers we Love.

Barry O'Reilly
Co-Author of Lean Enterprise present on how to enable an innovative culture in enterprises

Rod Johnson
Co-founder/CEO at SpringSource (acq by VMW), Investor, Author to discuss tips on building a successful startup

Adrian Mouat
Docker expert explains security concerns & offers best practices when working with containers

Conference: Sept 14-15 / Workshops: Sept 16-18, 2015

Topics: Agile, Lean & Rugged

- State of the art and emerging directions that will set you up with a broad view of these key concerns for developers in 2016
- The core story is being structured as a single track over the first two conference days
- Last conference day puts the concepts into practice with deep dives into tools and the latest products running alongside real user experiences

Wednesday, September 16	Thursday, September 17	Friday, September 18
Conference, Single Track & 2 Keynotes	Conference, Single Track & 2 Keynotes	Conference, 3 Tracks & 1 Keynote

Faster, Cheaper, Safer

Adrian Cockcroft @adrianco
Technology Fellow - Battery Ventures
September 2015

"You build it, you run it."

Werner Vogels 2006

Products, not Projects

Developer Responsibilities

Faster - Agile

DevOps
Continuous Delivery
No meetings, no tickets
Self service tools and APIs

Cheaper - Lean

Fail early and often
Instrument everything
Hypothesis driven development
Efficient and autoscaled

Efficiency Gains:
Virtualization consolidates CPUs
Docker consolidates CPU and RAM,
and timeslices resources

Autoscale production to consume just the resources you need, by the second

Safer - Rugged

What can developers do about the threats?

External Threats

Build using penetration test tools
Manage image supply chain
Hardened immutable services
Service roles and security groups

Internal Threats

*Assume employees are compromised
User roles, minimum privilege
Audit logs for everything
Encrypt data at rest*

Thanks for coming!
