**DevOps is good for IT performance**

and this IT performance translates

**DevOps is good for organizations**

**That was then...**

**10 deploys per day**

**Dev & ops cooperation at Flickr**

**John Allspaw & Paul Hammond**

**Velocity 2009**

This is now...

## Amazon Deployment Stats

(production & host environments only)

1,079

Max deploys  
In a single hour

Every **11.6** seconds!

10,000

Mean # hosts receiving  
Deploys simultaneously

30,000

Max # hosts receiving  
Deploys simultaneously

**This is now...**

## **Etsy Code Deployment**

What once required **6-14 hours** and an “Army”

...Now takes **15 minutes and 1 person**

**30+**

Deploys  
per day  
2013

**50**

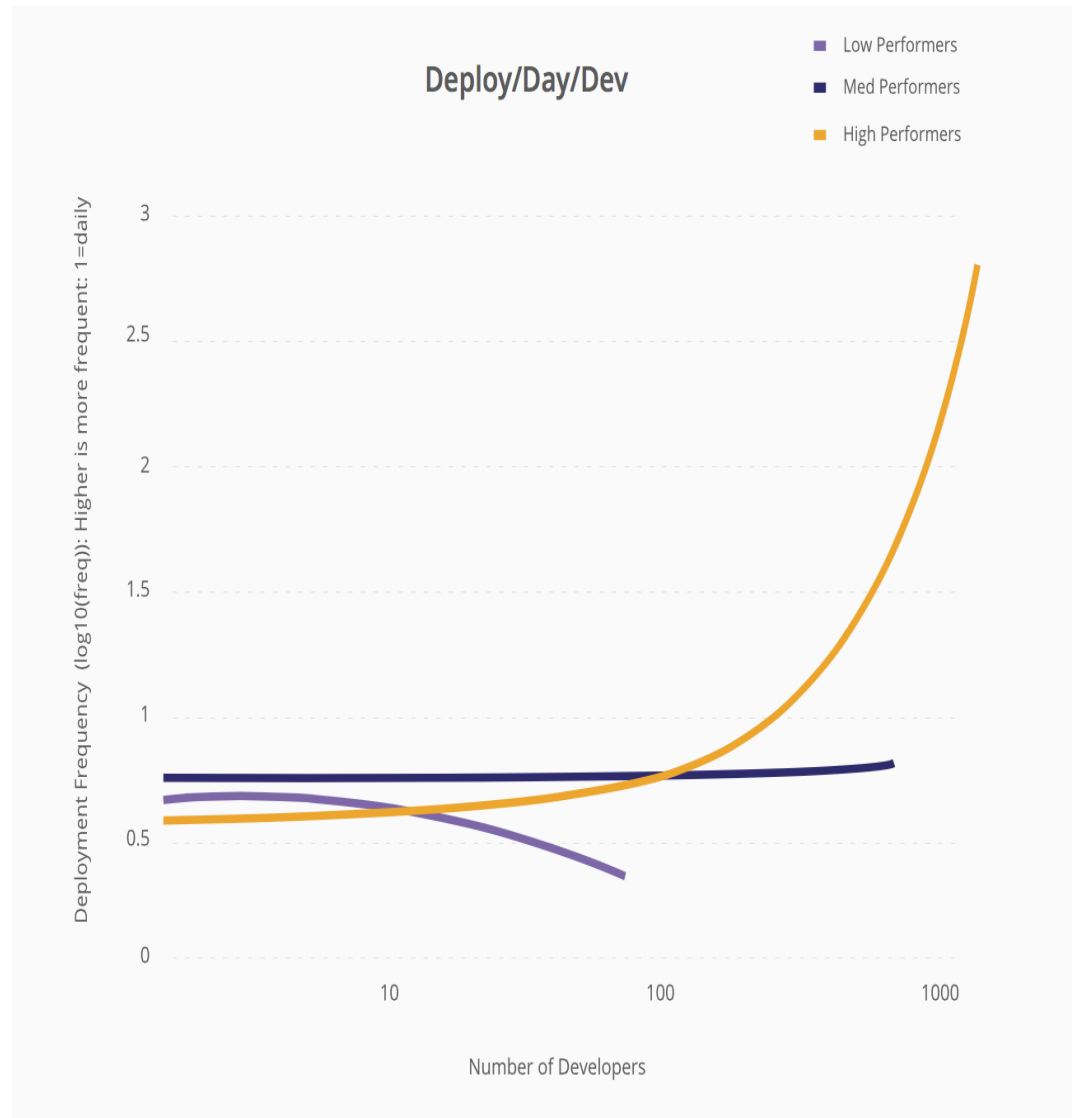

Deploys per day  
March 2014  
QCon London

**80-90**

Deploys per day  
April 2014  
Chef Conf

2013 Mike Brittain, Continuous Deployment: The Dirty Details  
3/2014 Daniel Schauenberg , Qcon London  
4/2014 tweet @philkates

# New research suggests the transformation is worth it

# Devops is good for IT

Measuring DevOps and *IT Performance*

- Deploy frequency (Note: NOT delivery)
- Mean Time to Recover (MTTR)
- Lead Time for Changes

# High Performing DevOps teams

More *throughput*

**30x**

More frequent  
Deployments  
(2015 and 2014)

**200x**

Faster lead times  
than peers  
(2015 and 2014)

# High Performing DevOps teams

More *stability*

**60x** (2015)

**3x** (2014)

Change  
Success  
Rate

**168x** (2015)

**48x** (2014)

Faster  
Mean time to recovery  
(MTTR)

**DevOps promises – and delivers**

More *throughput*

More *stability*

In tandem. Without the tradeoffs  
that ITIL calls for.

**Let's talk about what this means for  
us**

# High Performing DevOps teams

More *throughput* What does this mean for:

**30x**

More frequent  
deployments

New content delivery

Value/savings around A/B testing

Value around speed to market

Compliance / regulatory

Security

**200x**

Faster lead times

Evaluating well-designed and executed experiments that were designed to improve a key metric, **only about 1/3** were successful at improving the key metric!

# High Performing DevOps teams

More *stability*

What does this mean for:

**60x**

Fewer deploy  
failures

**168x**

Faster MTTR

Value/savings around reliability

Value/savings around uptime

Compliance

Security

Reputation around compliance &  
security

# NETFLIX

# Key Factors that Correlate with Each Component:

## MTTR

Version control for *all* production artifacts  
Monitoring

## Lead time for changes

Version control for *all* production artifacts  
Automated testing

## Deployment Frequency

Version control for *all* production artifacts  
Continuous Delivery

Also Super  
Important:

Culture  
Job satisfaction  
Climate for learning

**DevOps is good for organizations**

# High Performing IT organizations

2x

More likely to exceed  
Profitability,  
Market share, and  
Productivity goals

50%

Higher market cap  
growth over 3 years\*

# Three main contributors to organizational performance

1. IT performance and strong *DevOps practices*
2. Organizational *culture* and climate for learning
3. Job satisfaction – #1 predictor

# Organizational Culture

<b>Pathological</b> <i>Power-oriented</i>	<b>Bureaucratic</b> <i>Rule-oriented</i>	<b>Generative</b> <i>Performance-oriented</i>
Low cooperation	Modest cooperation	High cooperation
Messengers shot	Messengers neglected	Messengers trained
Responsibilities shirked	Narrow responsibilities	Risks are shared
Bridging discouraged	Bridging tolerated	Bridging encouraged
Failure leads to scapegoating	Failure leads to justice	Failure leads to inquiry
Novelty crushed	Novelty leads to problems	Novelty implemented

15%

52%

33%

## Top Predictors of Organizational Culture

- ▶ Job satisfaction
- ▶ Climate for learning
- ▶ Win-win relationship between dev and ops
- ▶ Version control
- ▶ Automated testing

# Intuit

“By installing a rampant innovation culture, we performed **165 experiments** in the peak three months of tax season.

Our business result? Conversion rate of the website is up **50%**. Employee result? Everyone loves it, because their new ideas can make it to market. ”

- Scott Cook, Intuit founder

# Amazon

“I think *building this culture is the key to innovation*. Creativity must flow from everywhere. Whether you are a summer intern or the CTO, any good idea must be able to seek an objective test, preferably a test that exposes the idea to real customers. Everyone must be able to *experiment*, *learn*, and *iterate*.”

- Greg Linden

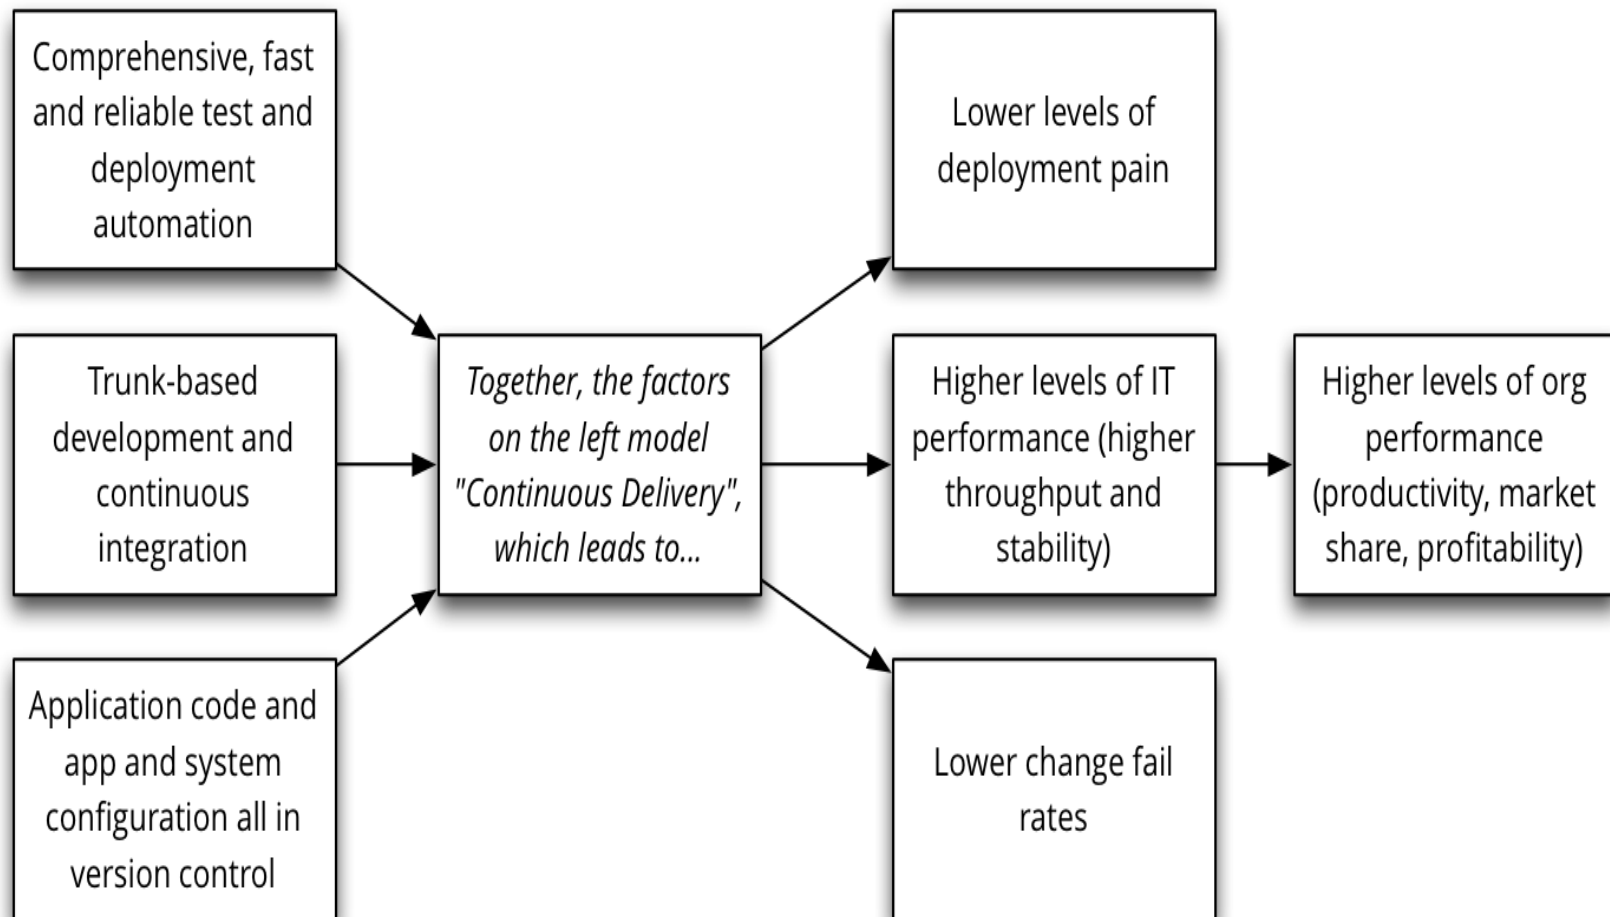

# Job Satisfaction

## Top Correlates of Job Satisfaction

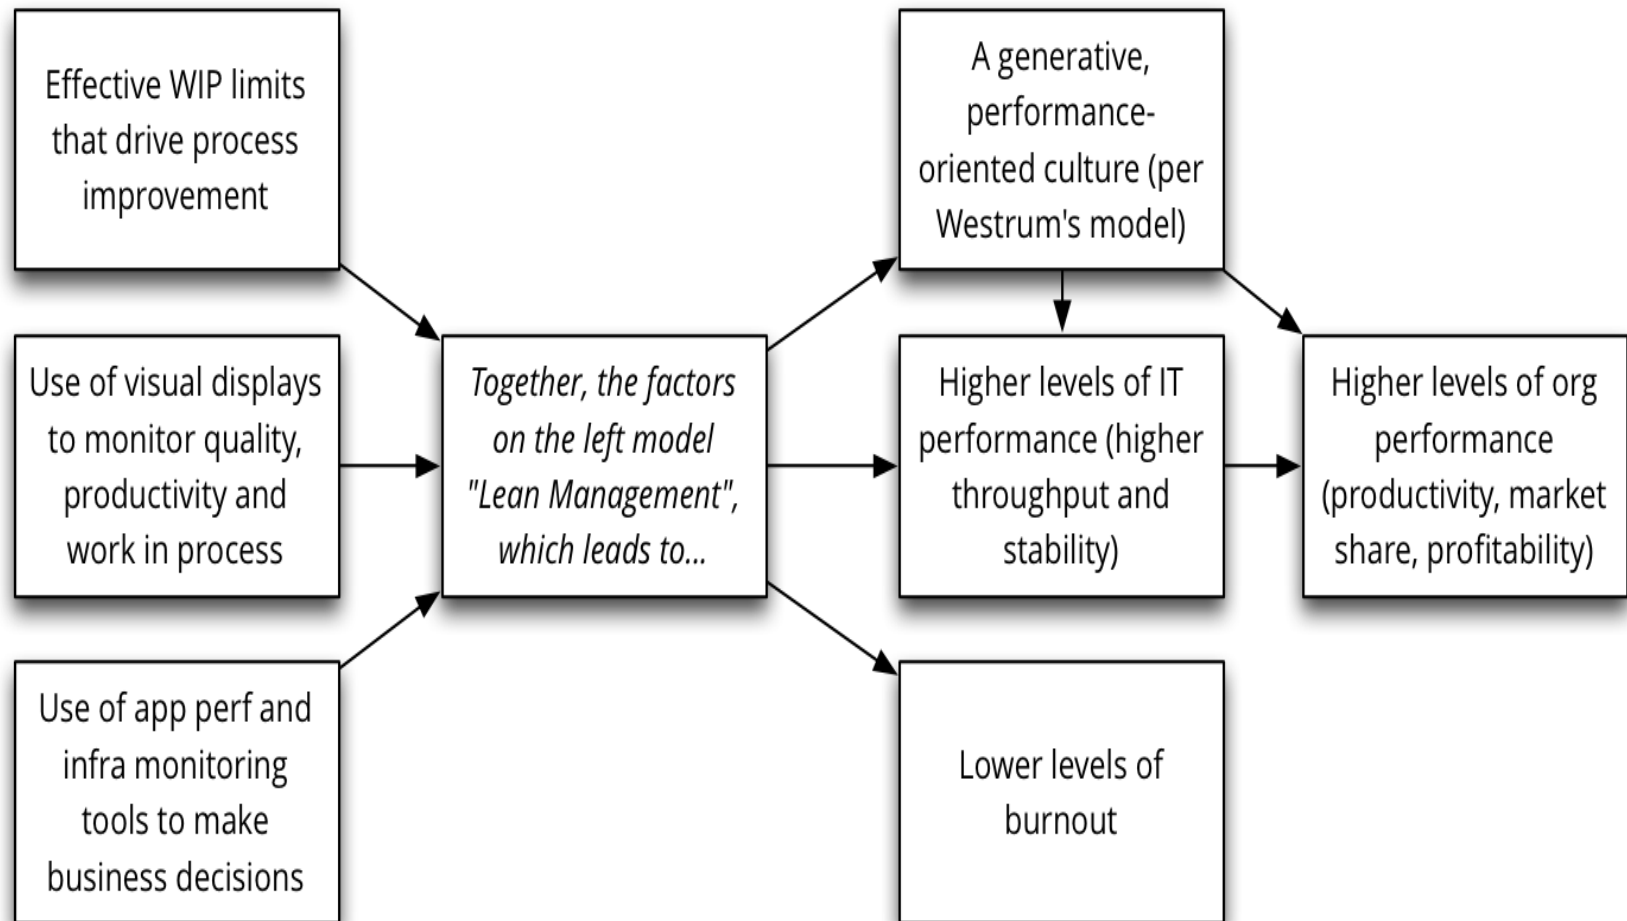

- ★ High-trust organizational culture
- ★ Climate of learning
- ★ Win-win relationships between ops, dev and infosec teams
- ★ Proactive monitoring and autoscaling
- ★ Use of version control for all production artifacts
- ★ Automated testing

Job satisfaction is the **# 1** predictor of organizational performance!

## We also know that CD is good for IT and Org performance

... as well as lean management practices.

**DevOps isn't just IT. It's the *practice* of IT.**

This practice gives us greater efficiency  
And contributes to the bottom line.

**This is Lean for the software and technology  
transformation revolution.**
