

Coding in Different Domains

James Gosling

Or:

Datamining the Brains of Mechanical Engineers

Or:
What I've been doing
during my (extended)
summer vacation.

Mostly Rambling

Genesis: joint VW, Stanford & Sun project

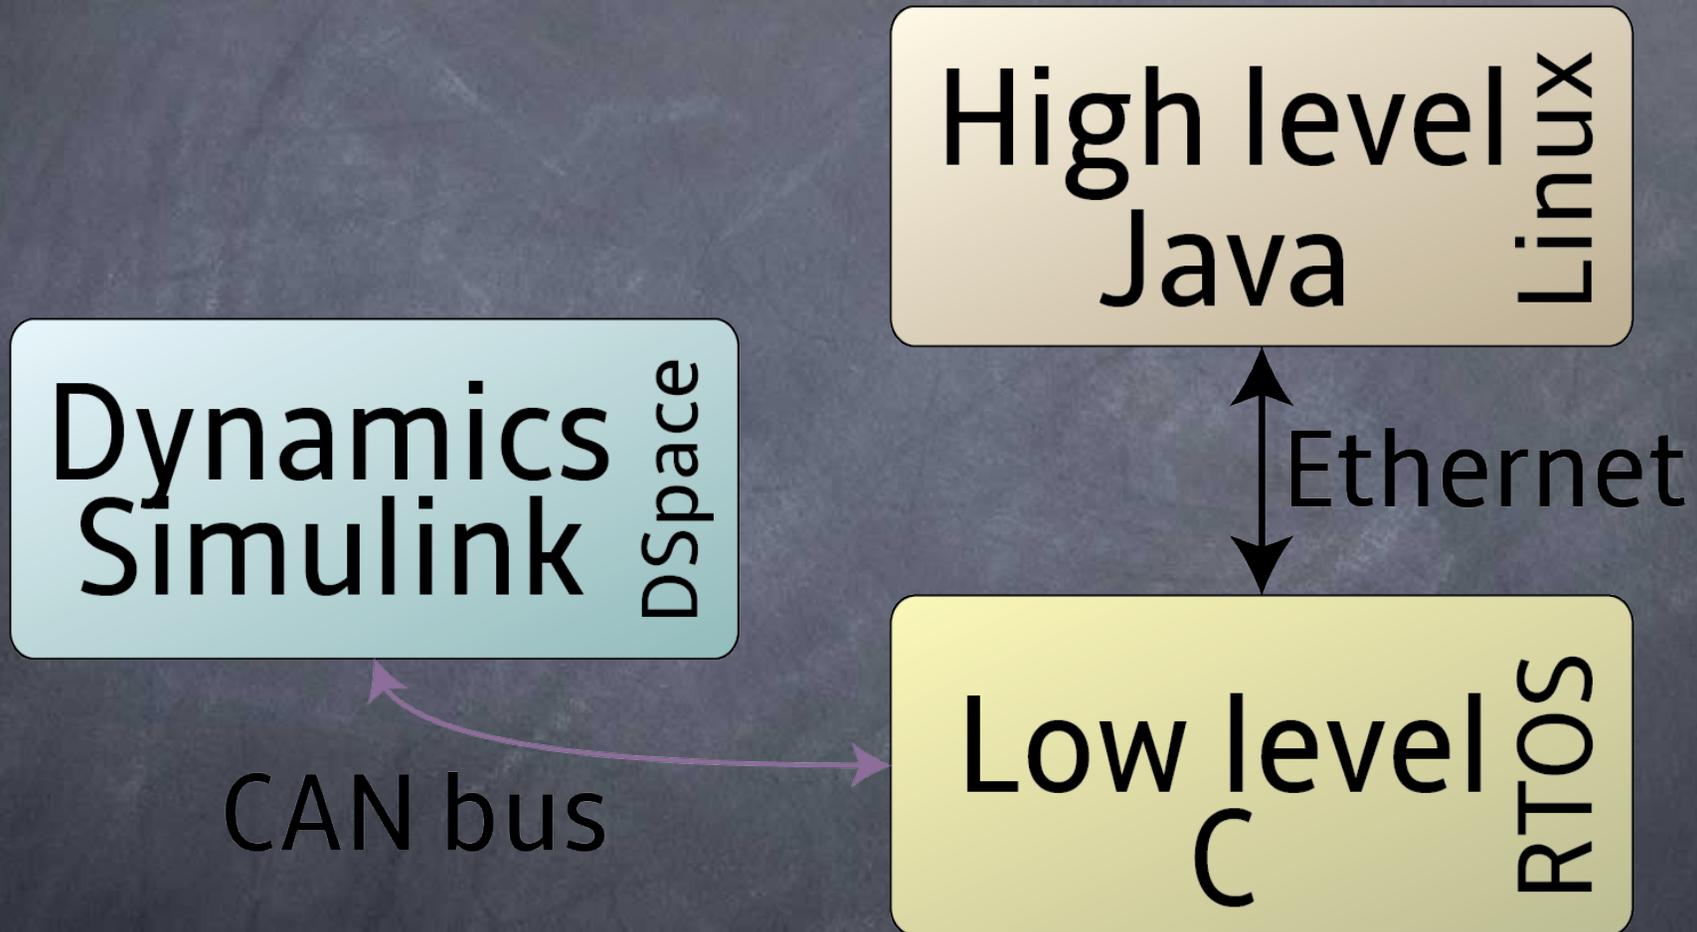

- An autonomous high-speed vehicle
- Skidding!

First, a Video

Old Architecture

Current Vehicle

Dynamics
Simulink

DSPACE

High&Low
level:
Java

Solaris

CAN bus

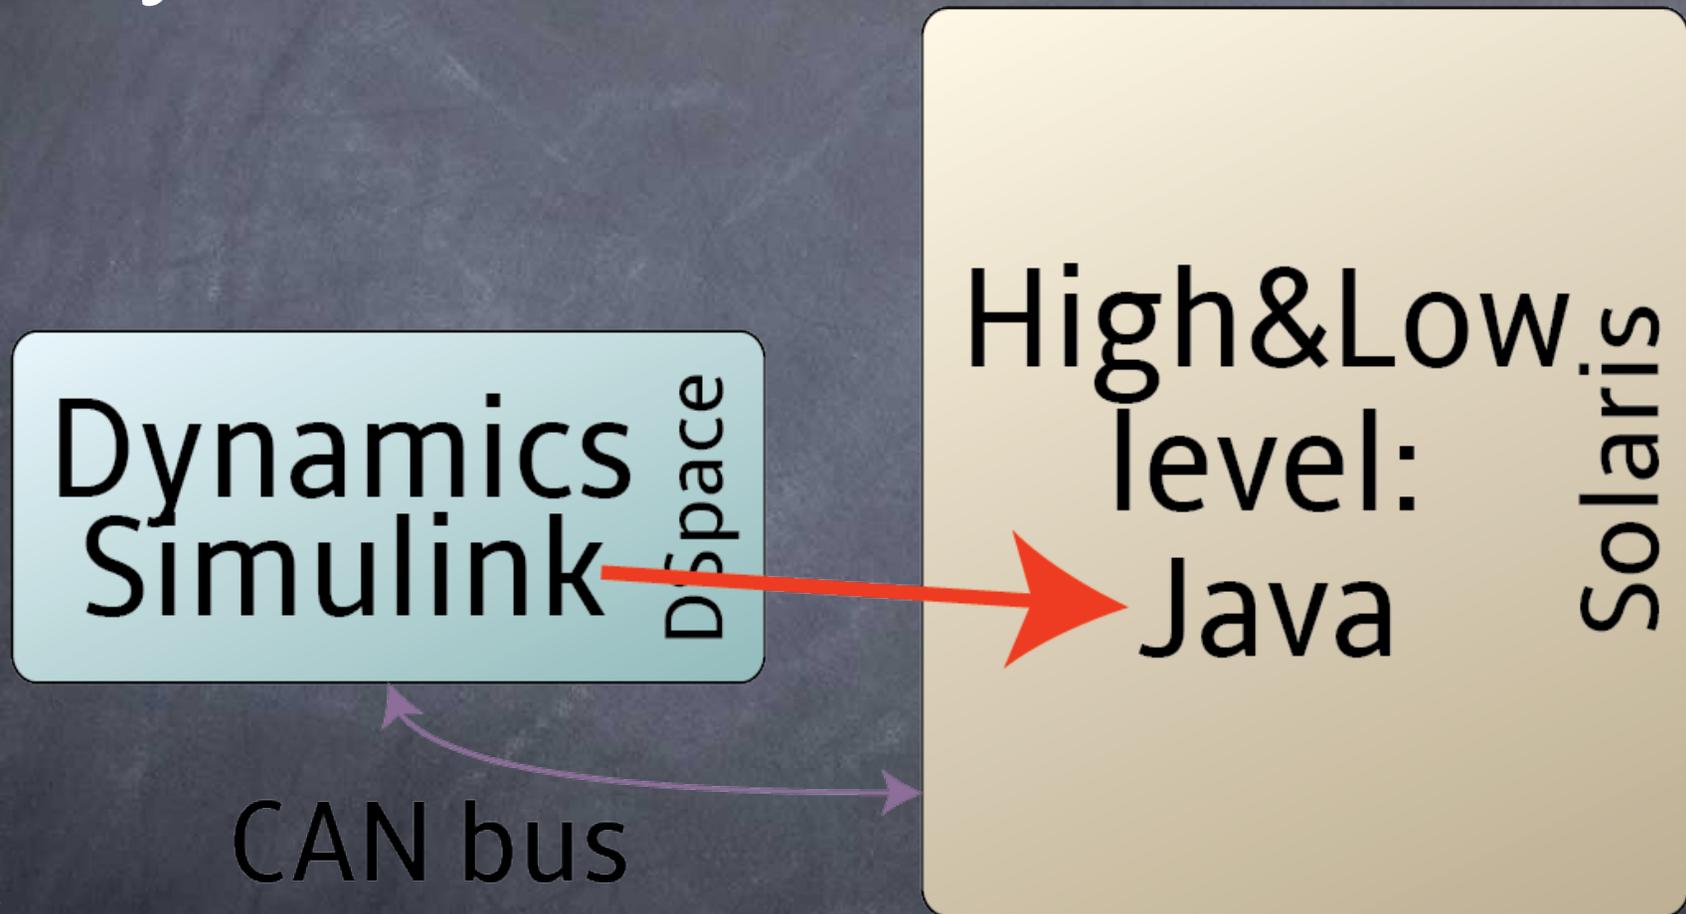

Can do

- Smooth surfaces fast
- Or irregular surfaces slow
- But not both

My Task

Endstate

High&Low
level
+Dynamics:
Java

Solaris

Matlab+Simulink

- Entrenched in engineering and science
- Matlab: fortran+apl+javascript
- Simulink: a visual programming metaphor for simulation
 - and a way to simulate

Used Outside the
Original Domain

Lets look at some code!

A True domain specific language

- For non-CS majors
- Who think in math
- Live in a world of infinite parallelism
- Where time is continuous

Viewed from a CS point of view

- Poor structuring
- Poor performance
- Scoping is horrific
- Doesn't scale

Domain-specific language by domain specialists

Can boil down to
something simple

- From a CS point of view
- Lets look at some more code

CS folks are bad at
getting in other folks
heads

Languages as UI

- A different kind of User
- A different kind of Interface

Don't lose the Math!

Archaeology@JPL

ACE: Software as transformations on algorithms

Computer Science is not Solved

- peek outside the bubble!
- but too many hard problems don't fit the "PhD topic" mold

It's a Journey
