the pursuit

*Go for the one that'll beat the
one that'll beat the one you
last did*

quick start: october 2006

Project manager

Business Analyst

Tech Lead

Developer

inception: Jan 17, 2007

Started with 2 pairs

Added one pair every 2 weeks

8 or 9 pairs by July

now

11 pairs of developers

8 business analysts

6 quality assurance

iteration manager

project manager

client principle

lessons learned

technology isn't as important as responsiveness
to business needs

don't try to convince too early

spikes are your friends!

demonstration over arguments

infrastructure

*Rock is for Rookies:
males have a
tendency to lead
with Rock on their
opening throw*

physical infrastructure

pairing workstations

XServe (Selenium Grid)

BA

standalone QA

integrated QA

UAT
(sneak peak)

deployment stack

10 web boxes

2 image servers

4 database
servers

background server

memcache

```
pgmac:~/work/ove-ruby% rake metrics:stats
(in /Users/pgross/work/ove-ruby)
```

Code to Test Ratio: 1:3.2

lessons learned

scale infrastructure opportunistically...

...but don't wait too long

Mac OS X rocks

have fun

testing

*Scissors on First:
play scissors as your
opening move against a
more experienced player*

disconnected unit tests

UnitRecord and the evolution of unit tests that don't hit the database

<http://github.com/dan-manges/unit-record>

the rule:

**unit tests don't hit the
database**

mock everything

zsh

ruby

.....
Finished in 248.573856 seconds.

3964 tests, 8288 assertions, 0 failures, 0 errors

**no mocking allowed in
functional tests**

**tests that hit the database are
sloooooow**

DeepTest

<http://github.com/qxjit/deep-test>

ruby

zsh

```

new instances added
as needed

cc.rb instances

Selenium view builds trunk

Selenium view builds release

core trunk build (commit build)

trunk + search infrastructure

core-release, externals, web services, datasets

VMware
Fusion

deployment & testing

lessons learned

fight the battle to keep tests fast

invent stuff if you have to

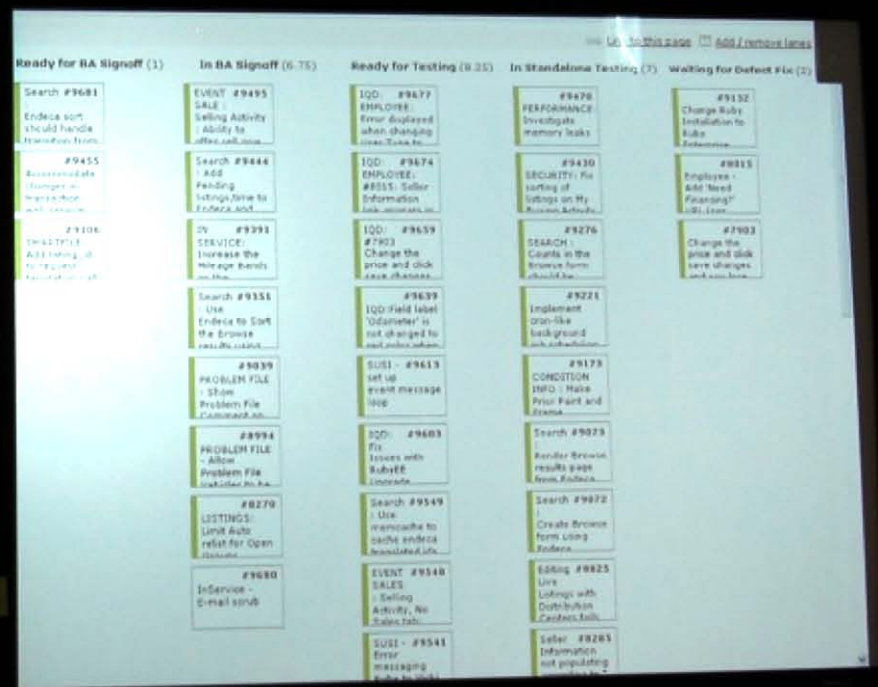

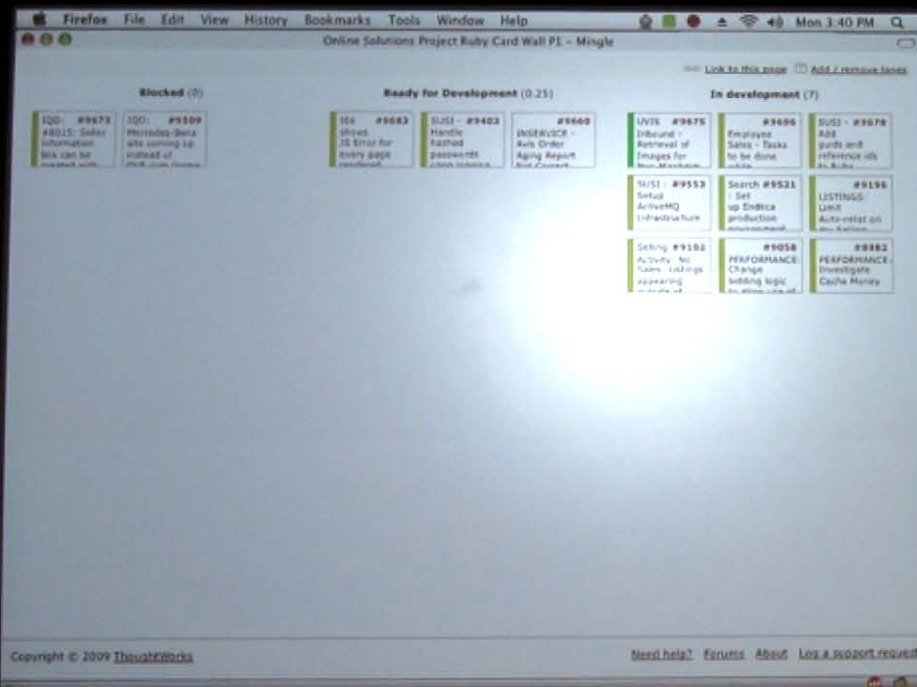

write smart tests

scale development infrastructure just like
production infrastructure

knowledge transfer

*Paper is the least obvious
of opening moves.*

play a song when a
build breaks

play theme song upon
successful checkin

A vintage jukebox with a glass top and a wooden spoon hanging on the wall behind it. The jukebox has a black body with a silver-colored top and a wooden handle. The glass top is open, revealing a turntable and several record sleeves. The wooden spoon is hanging on a blue wall. The jukebox is positioned in front of a wooden log wall.

jukebox.rb

currently in alpha

[http://subversion.hammersforge.com/
jukebox.rb/trunk/](http://subversion.hammersforge.com/jukebox.rb/trunk/)

pairing stations

adium

no email

internal Jabber server chat rooms

devs

BAs

QAs

shared buddy list

automatically set pair
name

adium

Mingle card (upon commit)

lessons learned

software is more about communication than technology

use information radiators

co-location rocks

pairing really rocks

have fun

automate everything

*When playing with
someone who is not
experienced at the RPS,
look out for double runs
or, in other words, the
same throw twice.*

**1-click deploy to any
environment**

**using cc.rb as easy deployment
tool**

rake commit

run all unit tests

run all functional tests

verification (language keys)

commit

http://github.com/pgr0ss/rake_commit_tasks

canonical pairing station maintenance

cap pairing_stations

radmind

<http://rsug.itd.umich.edu/software/radmind/>

strict rules for advanced language features

Rock beats scissors.

Paper beats rock.

Scissors beats paper.

*Tell your opponent
what you are going to
throw and then actually
throw what you said.*

monkey patches all live
in extensions folder

modularize extensions

extend (or include)
into real class

ancestors

```
>> String.ancestors
=> [String, StringExtension,
    ActiveSupport::CoreExtensions::String::Multibyte,
    ActiveSupport::CoreExtensions::String::Behavior,
    ActiveSupport::CoreExtensions::String::Filters,
    ActiveSupport::CoreExtensions::String::Conversions,
    ActiveSupport::CoreExtensions::String::Access,
    ActiveSupport::CoreExtensions::String::Inflections,
    Enumerable, Comparable, Object, InstanceExecHelper,
    Mixology, ActiveSupport::Dependencies::Loadable,
    Base64::Deprecated, Base64, LocalMethods,
    Wirble::Shortcuts, PP::ObjectMixin, Kernel]
```

where did you come
from again?

```
"".method :md5sum  
#<Method: String(StringExtension)#md5sum>
```

test the extensions

duh!

**include a version test
to break upon upgrade**

**use meta-names
somewhere**

ack is your friend

*Try playing the throw that would have
lost to your opponents last throw*

background

processing

3 kinds

continually run

updating cached values
counts

CRON-like behavior

run at a certain time

Asynchronous behavior

progress bars
image downloading

evolution of async messaging

do work inline

gets slower over time

traffic goes up

**switch to a real
messaging queue
(Starling)**

YAGNI

emergent design around async
messaging

lessons learned

avoid anticipatory design

gradually add complexity

don't use databases as message queues (for too long anyway)

DBA's can sometimes get grumpy

external dependencies

When playing against someone who asks you to remind them about the rules, take the opportunity to subtly "suggest a throw" as you explain to them by physically showing them the throw you want them to play.

**make well defined
boundaries**

**mock and stub
boundaries**

external builds to test
service changes

we often catch bugs &
downtime in other services

**tests to validate WSDLs
haven't changed**

tests to call services

check that responses haven't
changed

tests to check against
content & html editors

non-printable characters

duplicate ids

performance & optimization

When all else fails, go with paper: Statistically, in competition play, it has been observed that scissors is thrown the least often.

not that many page
views...

...really complex pages!

custom hand-tuned SQL

```
Listing.find(:all,  
  :from => "listings USE INDEX (PRIMARY,  
    idx_listings_simple_basic_search,  
    idx_search_fsp)")
```

```
find :all,  
  :include => [{:fsp => [:parent_company, :state]},  
    :currency, :account, :default_image, :make,  
    :model, :trim, :vehicle_type, :exterior_color,  
    :high_bid, {:search_postal_code => :state},  
    :state, :vehicle_location, :distribution_center,  
    {:buyer_group => :owner_group}, :title_status, :event_sale]
```

**Memcache sessions &
many database lookups**

MySQL replication

**use separate boxes for
ETL schemas**

write priority

challenges

For tournament play, learn the Great Eight Gambits.

scaling is hard

no matter the technology

rails can scale!

Page Views Trend

■ Page Views
