PHYSICS

So you want to take your data with you?

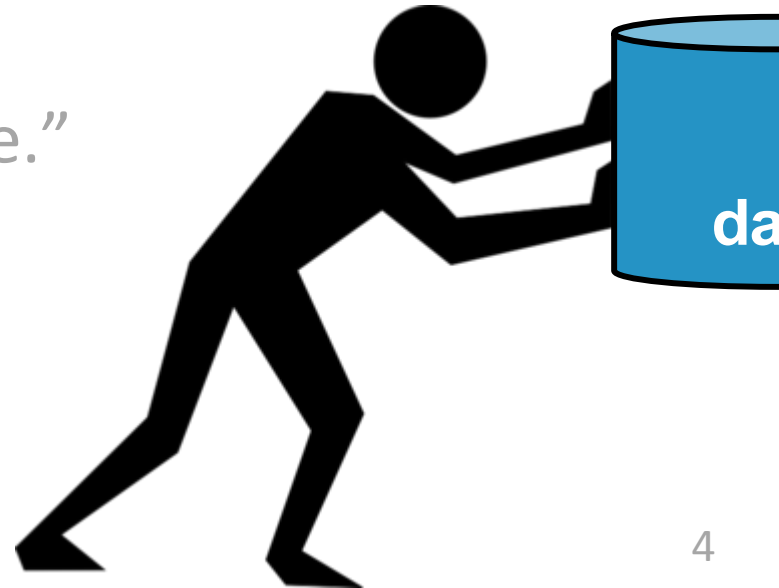

...then you are going to have to move it.

$$\text{work} = \text{force} \cdot \underline{\text{distance}}$$

“That’s physics. It’s inevitable.”

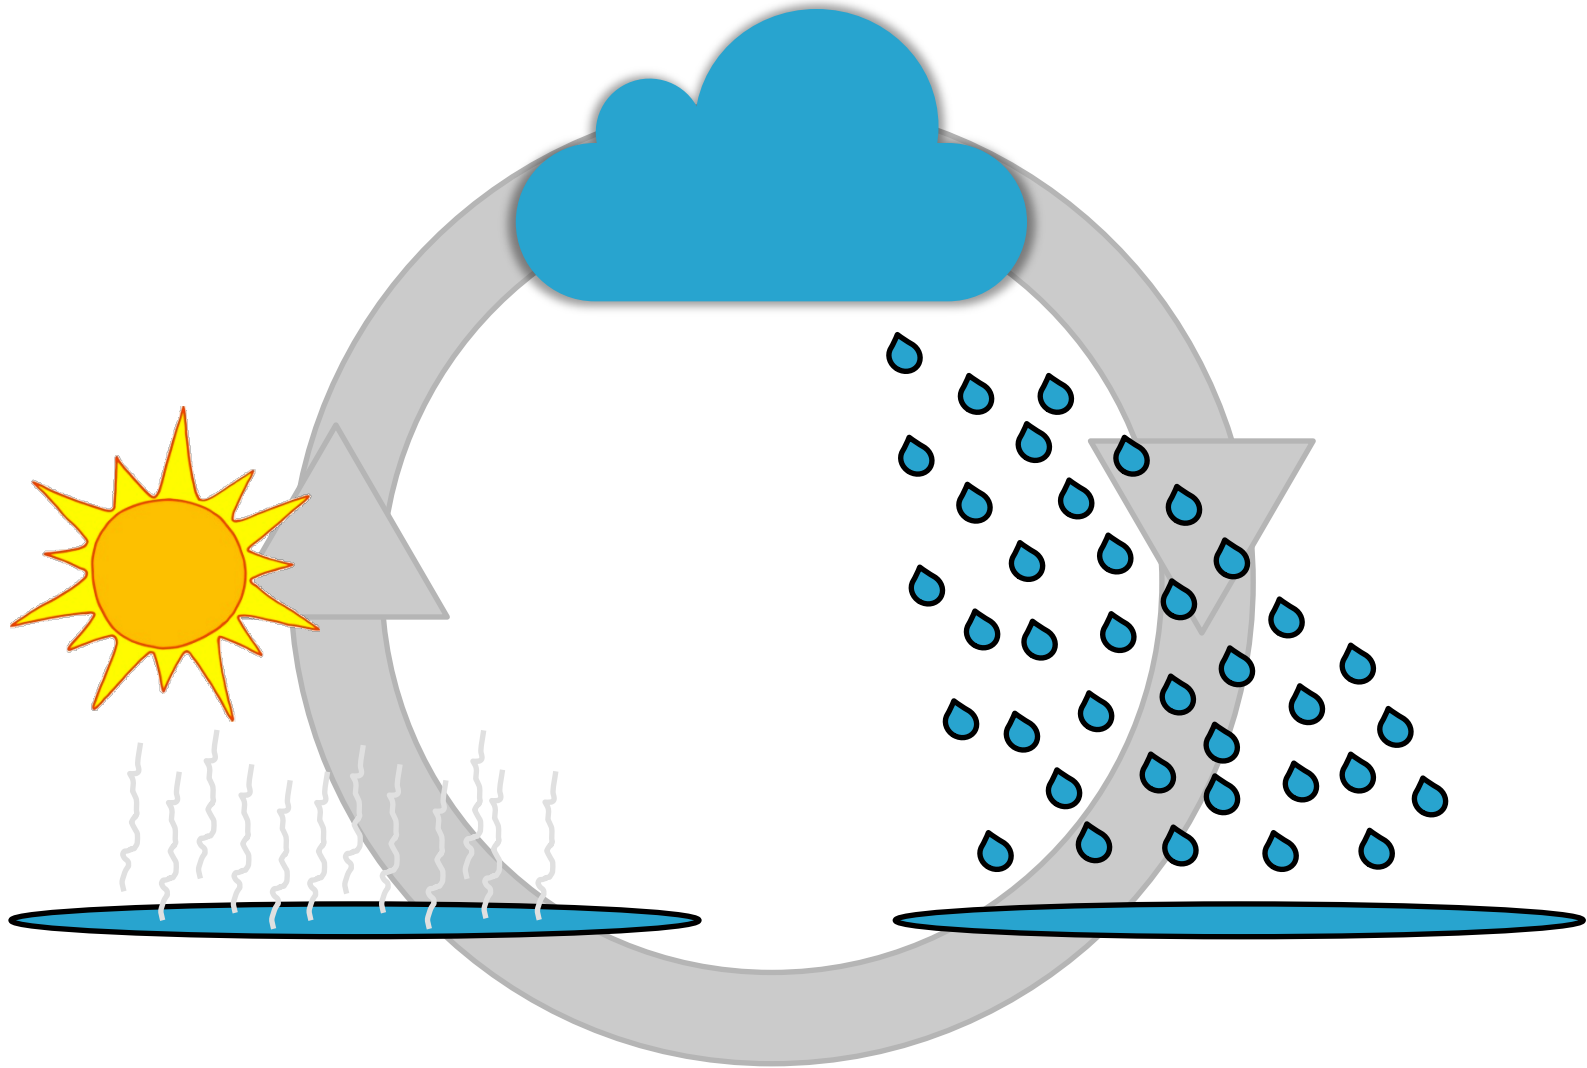

- Les Grossman

THE WATER CYCLE

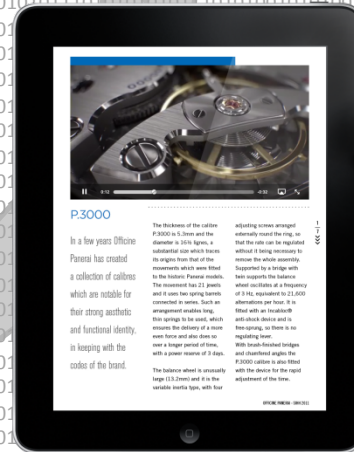

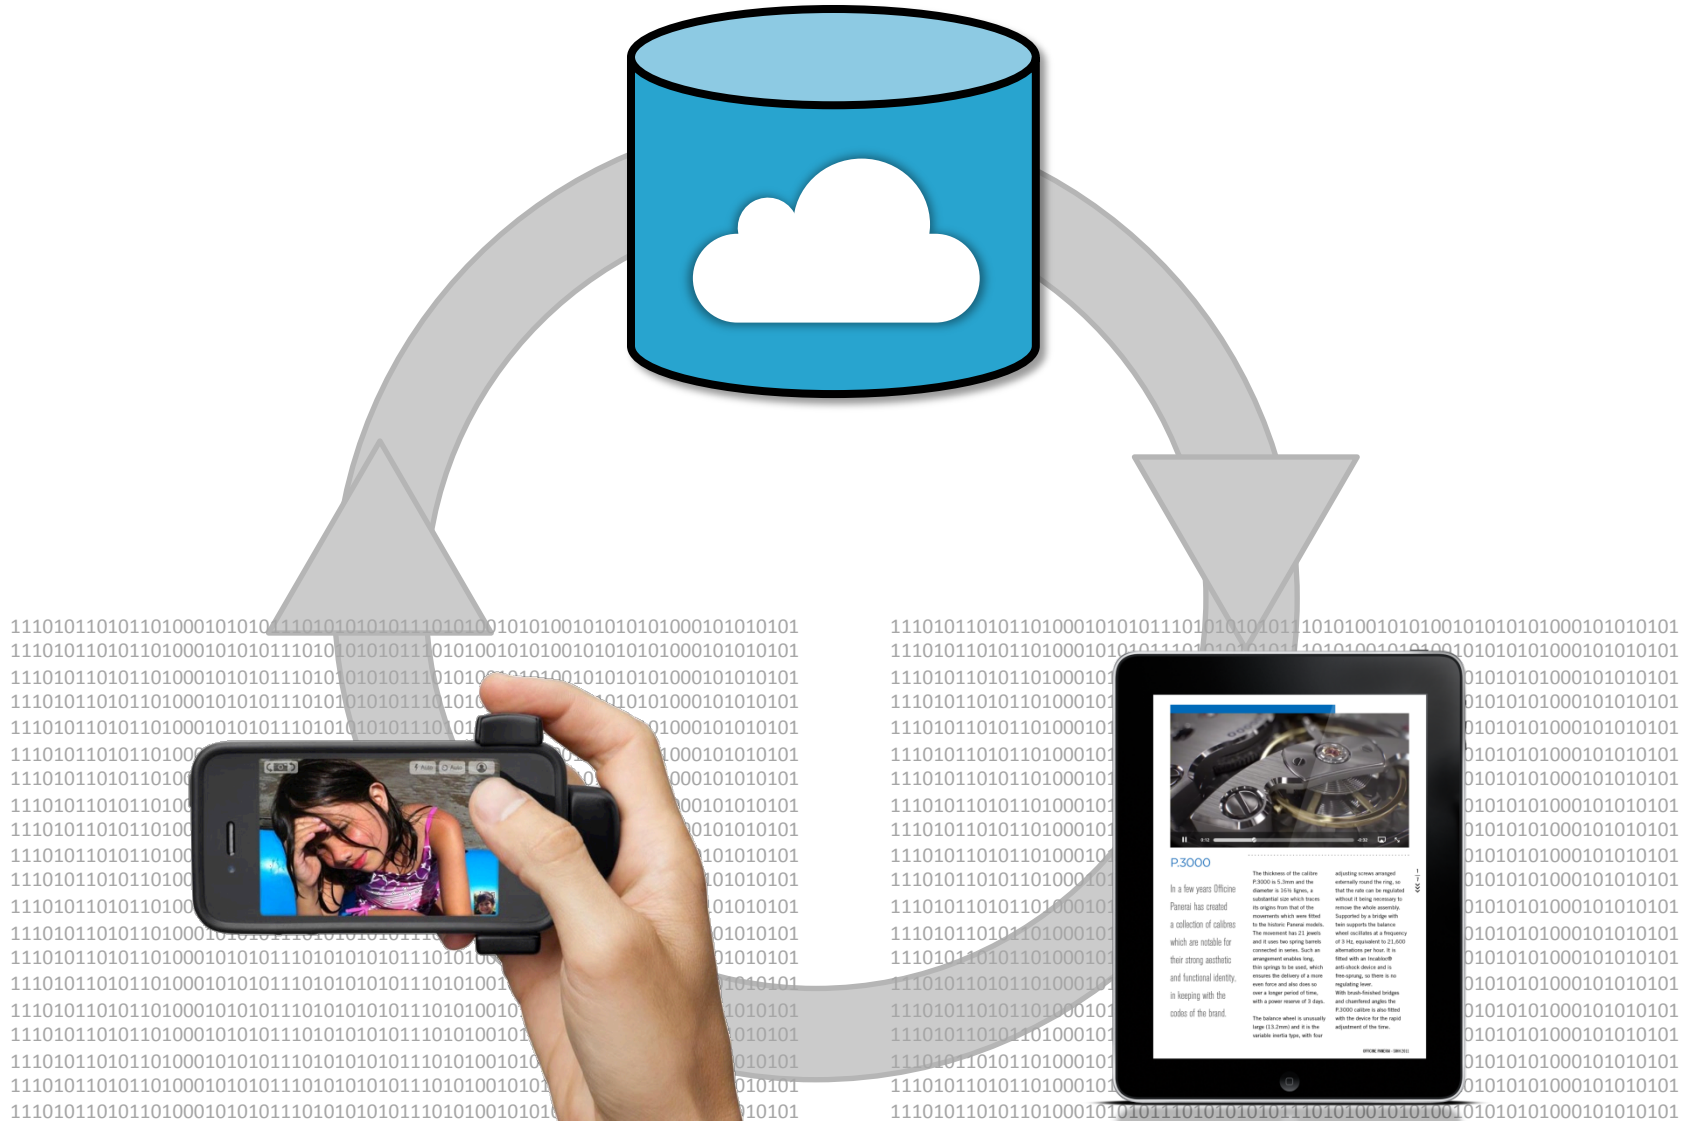

A large, stylized graphic of a water droplet is positioned in the lower right quadrant of the slide. The droplet is rendered in a dark blue color, matching the background, and has a subtle gradient and shadow effect, giving it a three-dimensional appearance. It is partially cut off by the right edge of the frame.

The water cycle

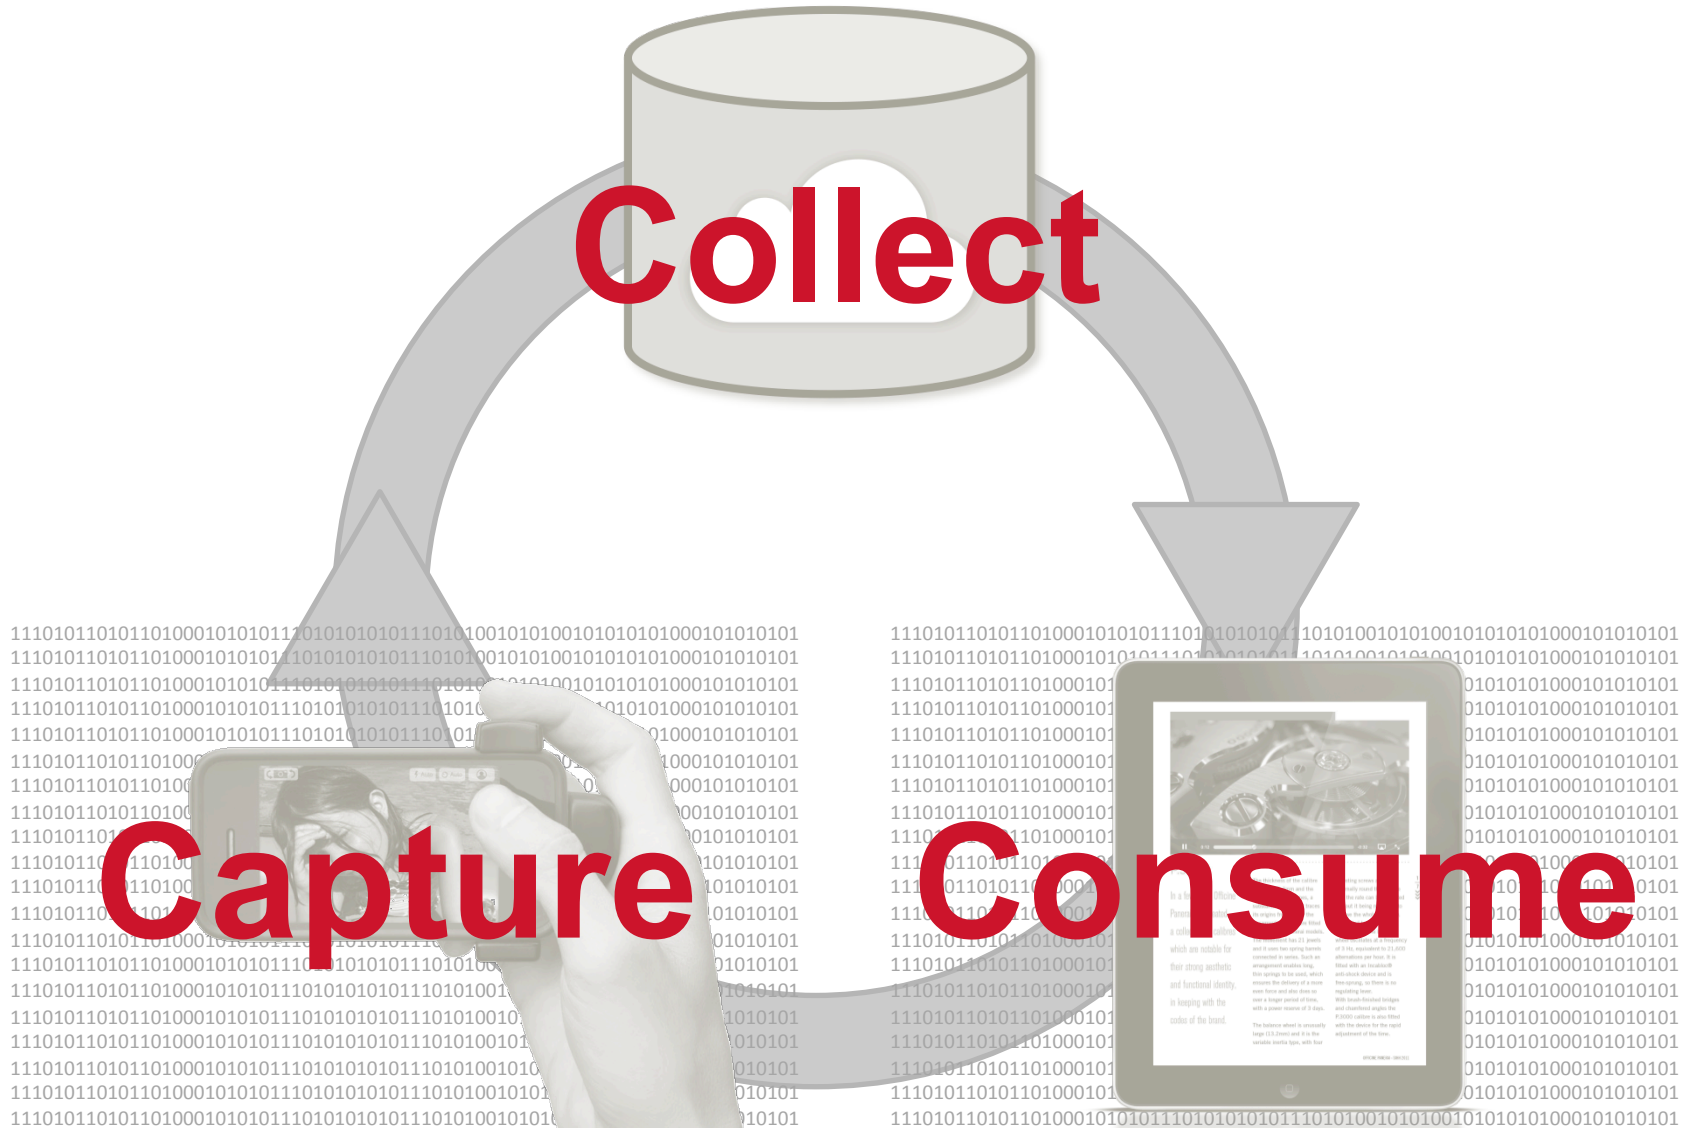

Fun fact: In 20 minutes, one thunderstorm can drop 125,000,000 gallons of water.

The water data cycle

Increasingly, it starts and ends with a mobile device

Actually, it starts and ends with a LOT of mobile devices

Mobile-broadband subscriptions have grown 45% annually over the last four years and today there are **twice as many mobile-broadband** as fixed-broadband subscriptions.

The number of mobile-connected devices will **exceed the world's population** in 2012; and monthly global mobile data traffic will **surpass 10 exabytes** in 2016.

Fun Fact: By the end of 1999, the sum of human-produced information (including all audio, video recordings and text/books) was about 12 exabytes of data, according to Berkeley study.

GUNS, GERMS AND STEEL

Make farming data work

Make intelligence data work

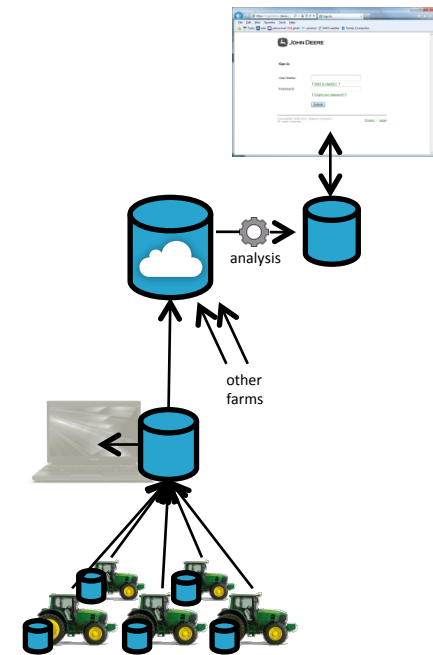

Connecting millions of mobile devices to the cloud

Type 1
backup and sync
my stuff

Type 2
sync relevant portion
of a database

Type 3
collect machine-
generated data

We'll focus on Type 2

Type 1
backup and sync
my stuff

Type 2
sync relevant portion
of a **database**

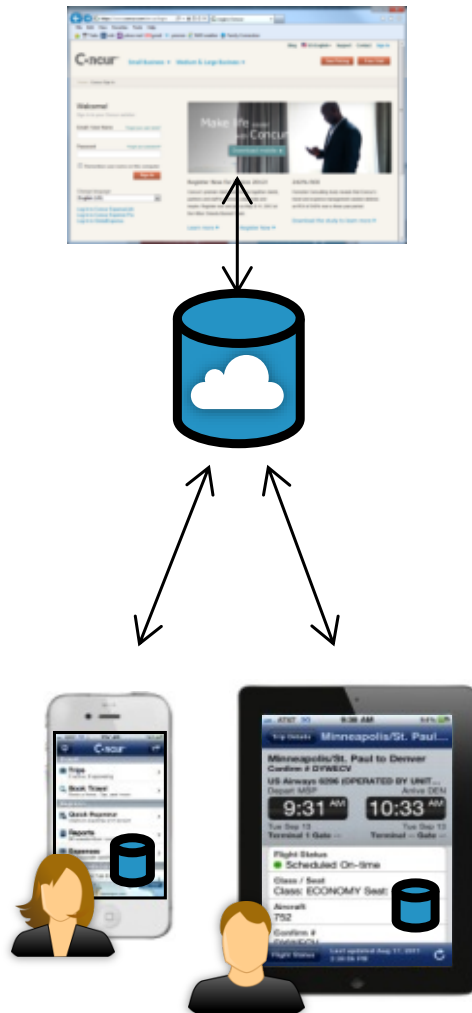

Type 3
collect machine-
generated data

Most applications combine patterns.

SLAYING DRAGONS

Type 2 Mobile Sync

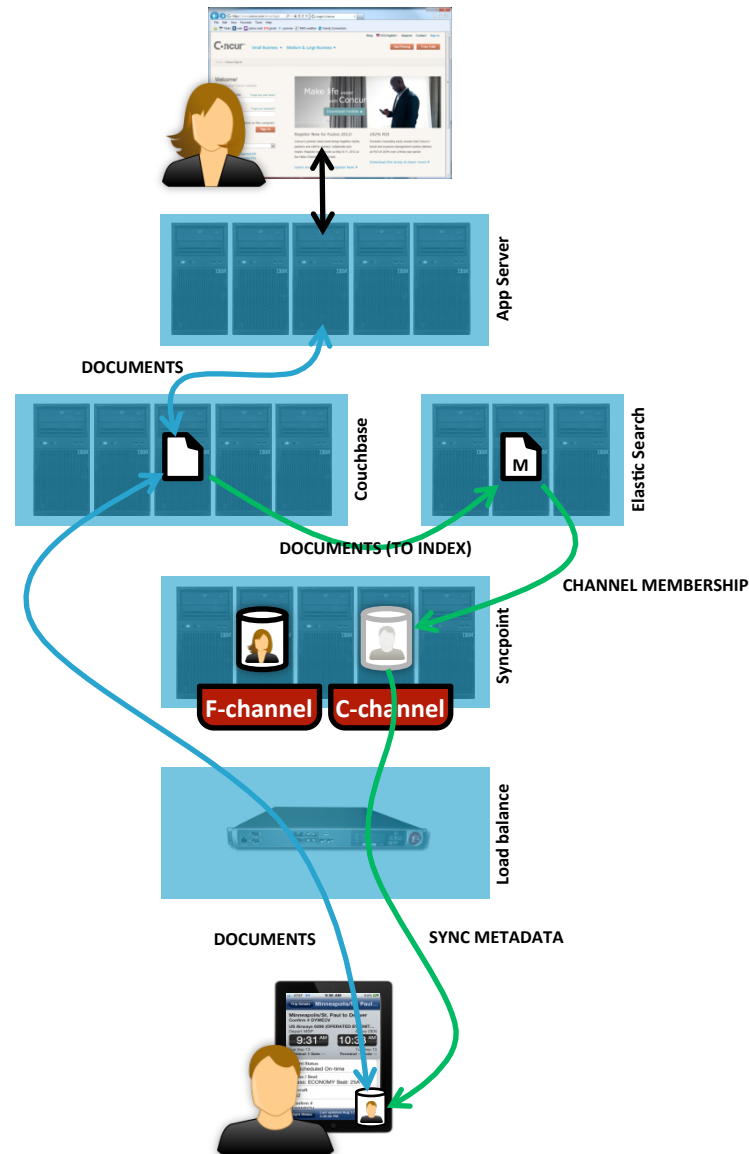

The ultimate home of the data for a business application is not on the device, but is a central data store in the cloud.

Here there be dragons

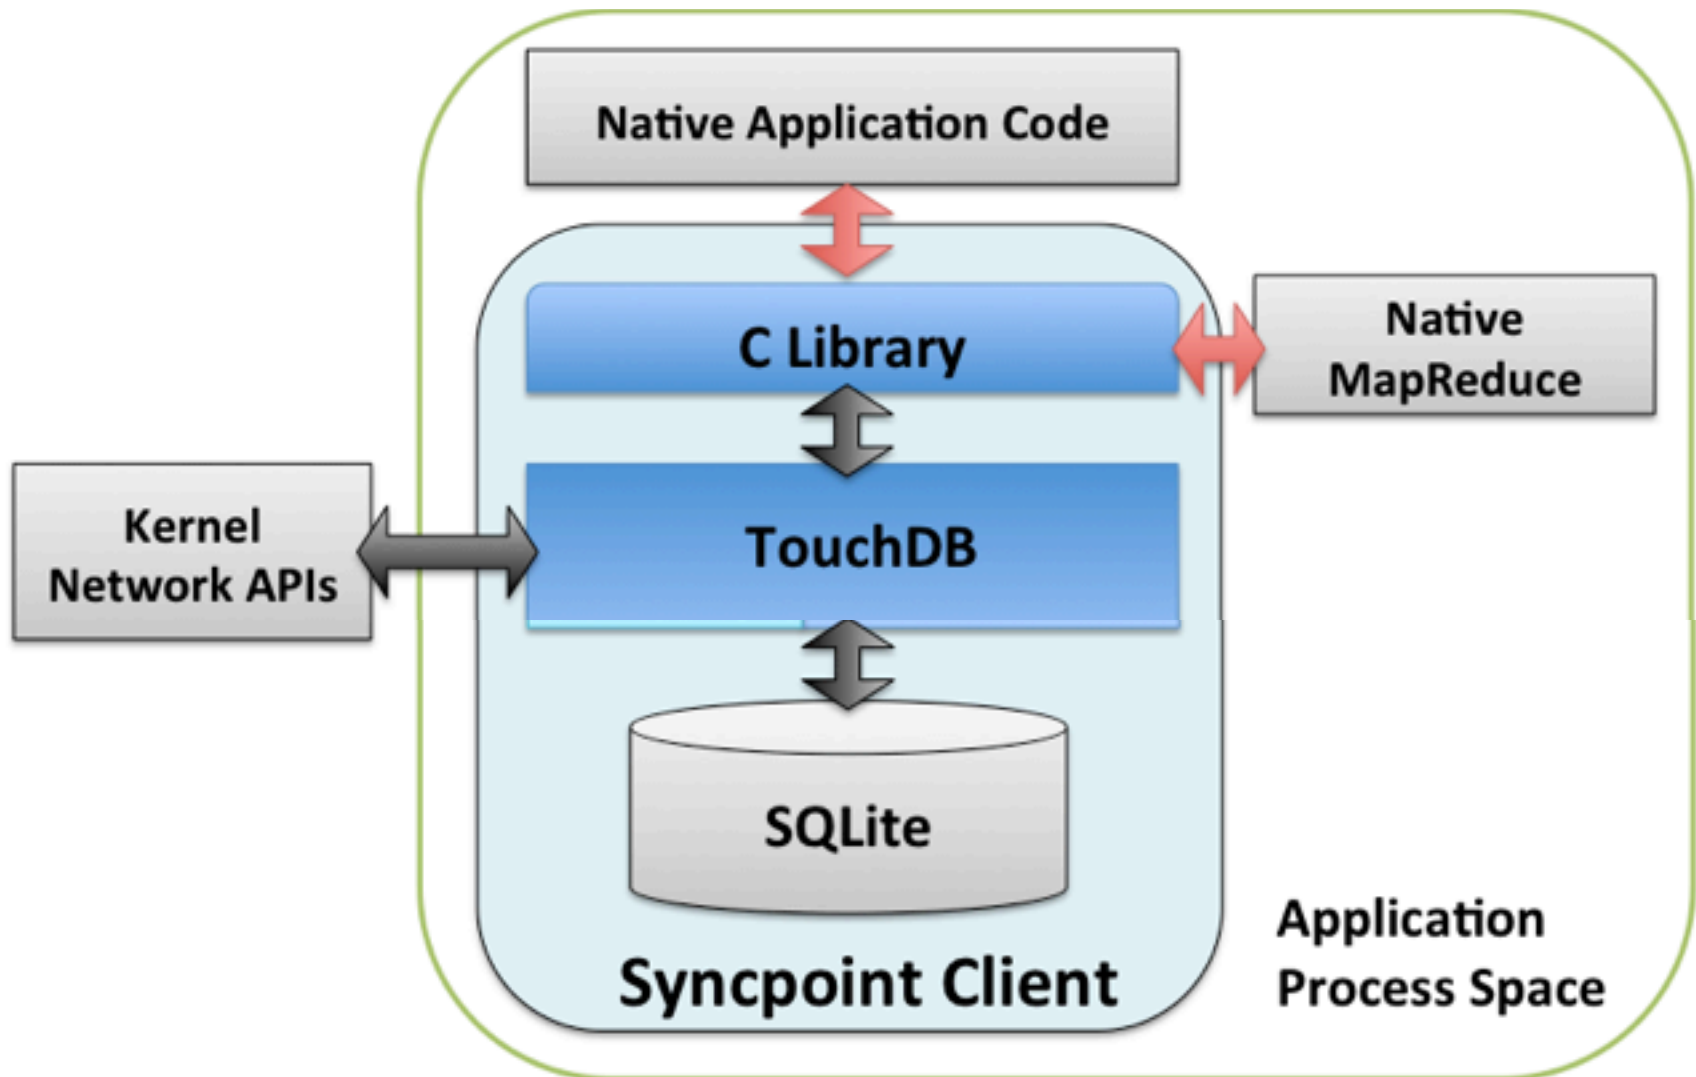

Hard at “enterprise scale.” Excruciating at “web scale.”

A multi-tier, scalable type 2 sync architecture

TouchDB – Foundation for Syncpoint

TouchDB Betas – Works with CouchDB Today

Not a complete product but a functional open source projects with production deployments. Open source, and available from Couchbase labs.

TouchDB for iOS

TouchDB for Android
