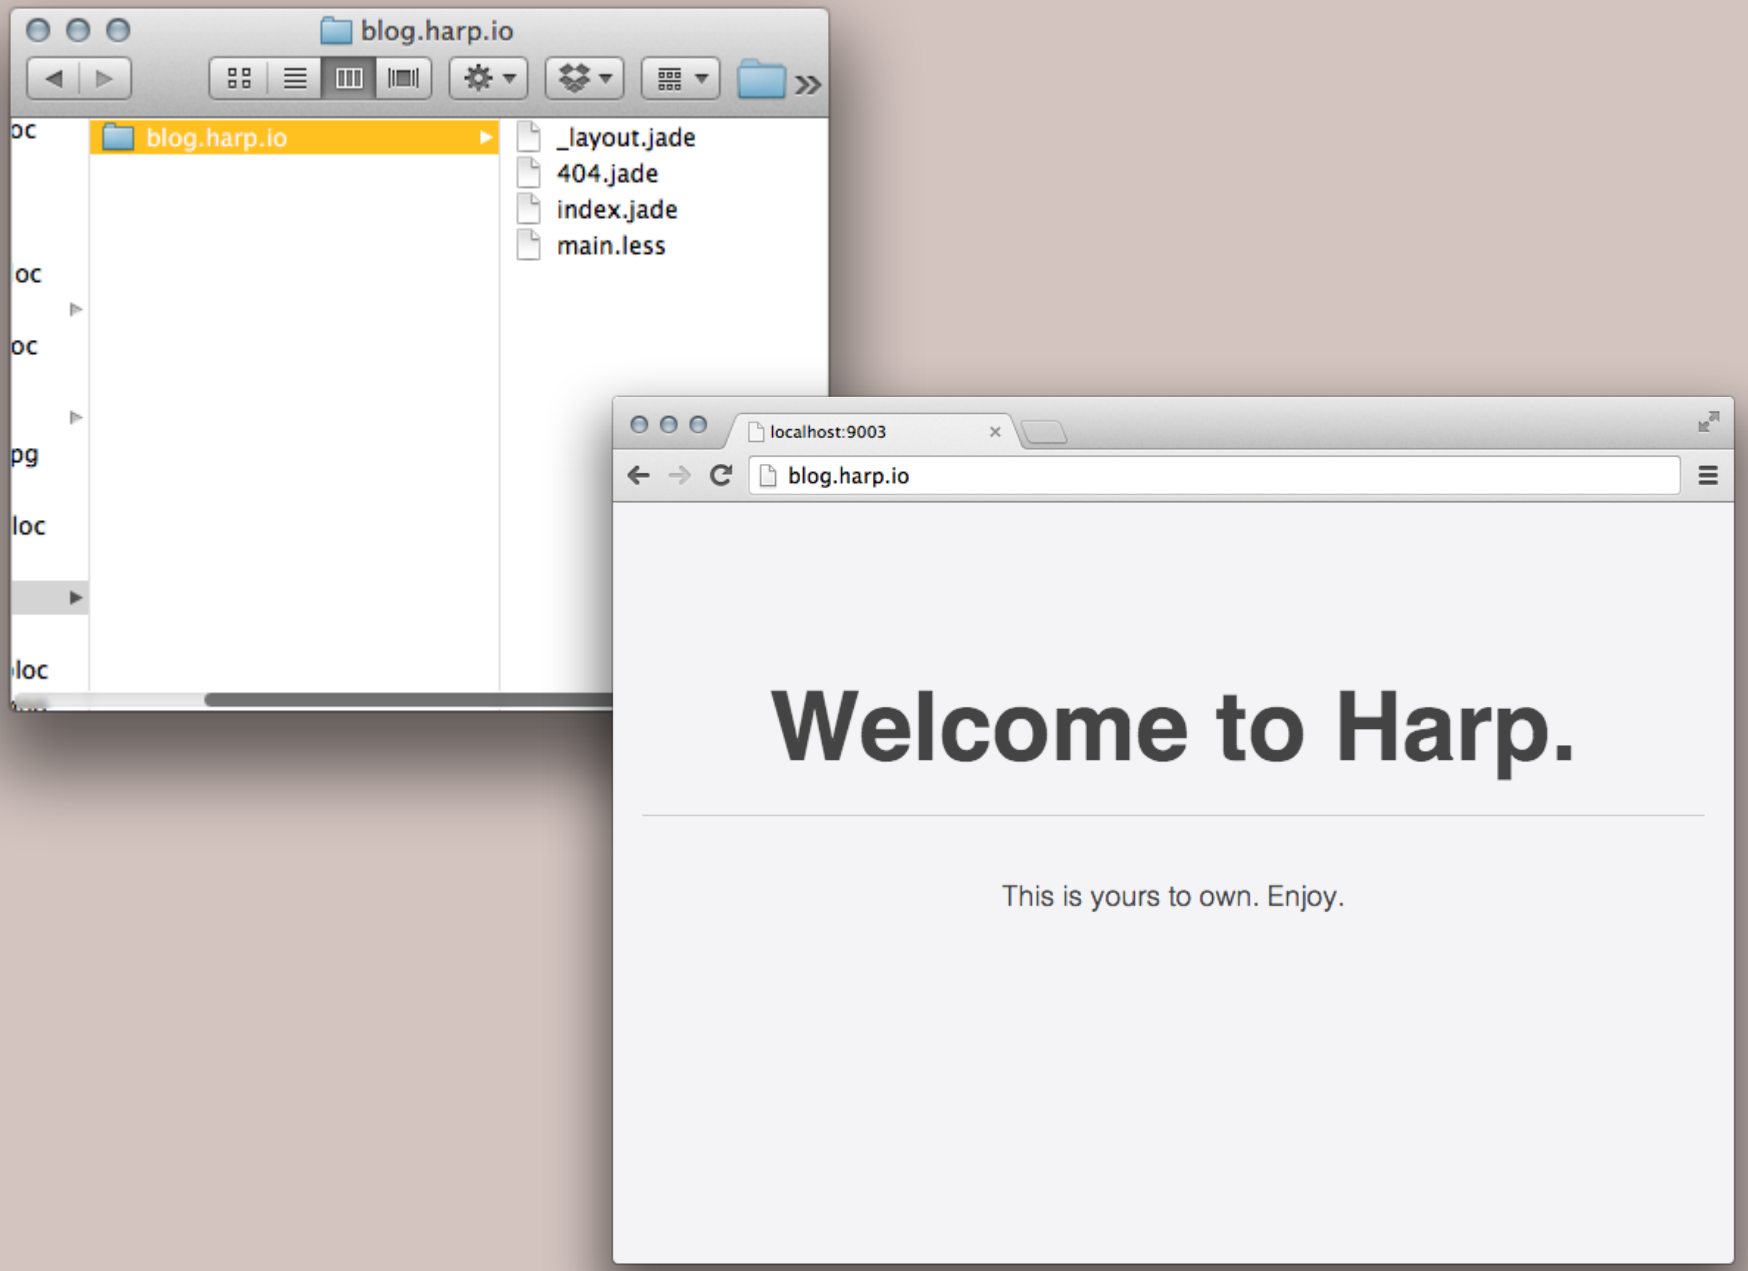
harp
Documentation
FAQ
Community
Source
The static web server with built-in preprocessing.
$ sudo npm install harp -g
$ harp init myproject
$ harp server myproject
Get Started
Harp serves Jade, Markdown, EJS, CoffeeScript, LESS and Stylus as HTML, CSS & JavaScript—no configuration necessary. It makes front-end development a treat.
Here's how Harp helps



blog.harp.io
blog.harp.io
_layout.jade
404.jade
index.jade
main.less
localhost:9003
blog.harp.io
Welcome to Harp.
This is yours to own. Enjoy.

```
npm install -g harp
```

```
www/
 |- index.jade
 |- main.sass
 +- app.coffee
```

Promise of the Web

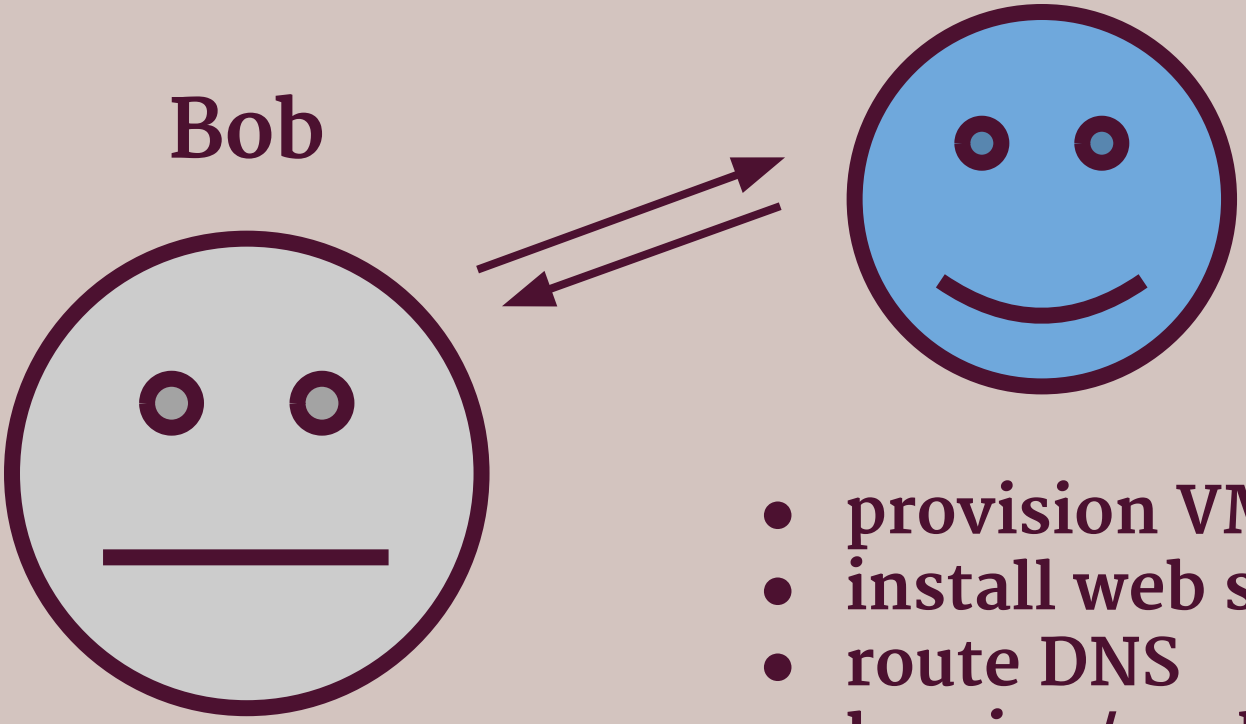
- Low Risk
- Quick Setup
- Easy to Deploy
- Accessible
- Open Tech

The Reality…

Meet Bob

Bob wants to publish to the web

some other fucking person



- provision VM
- install web server
- route DNS
- logging/analytics
- CDN??
- loadbalance
- scale??

```
npm install -g surge
```

JavaScript

why wont it go away?
